day before subjecting them to the weekend traffic.

On Friday night green watering is a headache because traffic wounds on soft greens don’t heal rapidly and there is always plenty of evidence of hallmarks. If the wind doesn’t let down on Thursday night, I’m forced to water Friday evening, but the sets are appreciably shorter.

Friday morning all the greens are mowed, and following right behind the greenmowers are the two spray rigs. The 45 greens, two putting greens, and two bent nurseries are sprayed each Friday. Each rig takes out six loads and barring any breakdowns, it is usually 4 p.m. when they are finished. This Friday fungicide application is a Philadelphia-Baltimore practice. The supts. there want to be safe over any three-day weekends when they operate with skeleton crews.

Stay Clear of Greens

When the greenmowers are returned to the barn, two Toro Professionals are moved out to mow tees, and a third to clean up around trees and bushes. The Locke triplex is used to mow the banks around the greens and one width around the fairway traps. We make an effort to keep the tractors from mowing too close to the greens so that their wheelmarks aren’t seen in the same place all the time. This places a heavy burden on the Locke operator.

Two tractors, pulling seven-gang units, are used to mow fairways on the South Course. A new, low-center-of-gravity tractor pulls a five-gang on hilly Rolling Hills. After everything is operating smoothly, Ted Wiersema, my mechanic, mows the North course fairways, which are long and wide, with a nine-gang unit. I always have a man ready to replace Ted in case he is called back on a breakdown. At about 3:30 p.m. all the fairways but one or two have been finished and it’s quite satisfying to see three tractors rolling down that last fairway. All week long one seven-gang and one five-gang have been working the roughs. So there is never any rough to be mowed on Friday.

Our extra help push rotaries on the clubhouse lawn or along the creeks where weekend bottlenecks are likely to occur.

The Friday night details include: changing the hole cups for Saturday morning, filling ballwashers and putting out clean towels. On Friday nights we water tees in three sets, all of 1½ hours duration.

Saturday and Sunday mornings my crew goes to work before the sun rises. We load five greenmowers on the pickup truck and drop them off on Nos. 1, 2, 3, 4, 5 of the South course. A second truck-load takes care of the low numbered greens on the North course. The remaining four machines mow the practice putting greens and then proceed to Rolling Hills. By 7:30 a.m. all the greens have been mowed and the machines washed and put away. When the sandtraps have been raked, and the garbage hauled from the refreshment stands, the employees are free to go home.

Cups Are Changed

Just before noon on Saturday two boys change the hole cups and move the tee markers. Around 6 p.m. the hole cups are changed again for Sunday morning.

On Sunday morning the greens are mowed again, traps raked, tee markers changed and garbage hauled. The crew is usually homeward bound by 8:30 a.m.

An emergency crew is on alert for Sunday syringing duty since the last watering of the greens took place early Friday morning. At noon on Sunday the hole cups are changed once again.

On Sunday evenings I usually return to the club. This enables me to look for any weekend damage, start the pumps and give the waterman his schedule. On Sunday (as on Thursday) we can water more heavily because Monday’s play is light. Sunday evening is a fine time to prepare the coming week’s schedule, Tournaments on Tuesday, Wednesday, and Thursday. How many golfers? Which course are they on? Is there a ladies group this week that wants special attention? If we have 85 airline stewardesses on the North course on Tuesday, that’s where I want to be! That’s one of my fringe benefits.

How about twilight leagues this week? Are they playing every night or do we get a break one night this week?

Does this sound like a merry-go-round? Confidentially, it is.

Change Handicap Allowance

Under new rules adopted by the USGA, golfers in four-ball play may now use 100 per cent of the difference between their handicaps and that of the low-handicapped player on a better ball basis. In all other four-ball play they will use full handicaps. Previously the allowance was 85 per cent.
