Is It, or Isn't It
A GCSA Record?

2,611 Attend
Cleveland
Convention

Attendance at the annual GCSA international turf show fell short of shattering the record established in 1964 in Philadelphia, but the turnout for the Cleveland convention, held in early February, came close to what had been anticipated. A total of 2,611 persons, including supt.s., their wives and course distributor and manufacturing reps, came to the Ohio city for the 36th gathering of the greenmasters. The crowd at Philadelphia exceeded 2,700.

(However, members of the Cleveland GCSA, who had charge of arrangements for this year's show, point out that approximately 150 turf students were included in the head count at the Philadelphia convention, making the 1964 attendance figure somewhat unrepresentative. Students weren't included in the Cleveland tally.)

The Cleveland weatherman was most cooperative. He provided balmy, 60-degree temperatures for the visitors on at least two days and refused to show them a cold front during the week they were in the city. A "let's go out and play golf" feeling prevailed, but the conscientious supt.s. resisted temptation and dutifully appeared at the education sessions. Attendance at the final gathering on Friday morning, at least, almost equalled that of opening day.

L. R. (Bob) Shields, Jr., who has been at Woodmont CC, Rockville, Md., for the last 13 years was elected president of the GCSA. Edward (Ted) Roberts of Fairmount CC, Chatham, N. J., is vp, and John Spodnik, supt. at Westfield CC, LeRoy, O. is secretary-treasurer.

By JOE DOAN

First Session

Club Manager Says
He Envies Turfmen

Leonard Strong, retired Saucon Valley supt., who served as the GCSA’s 17th president, was the chairman of the opening education program session. Rev. Raymond Lewis of the Old Stone Church gave the invocation. Mayor Ralph Locher, who during the week couldn’t get the City of Cleveland maintenance department to heed his orders and had to waive several employees off the payroll, must have taken some consolation in the fact that the golf maintenance men were willing listeners. In his welcoming speech, he described the great construction activity that has been going on in Cleveland in recent years, and called attention to the city’s reputation as one of the country’s leading sports, cultural and scientific centers.

Other Speakers

Other speakers at the Monday morning meeting were Ben Chlevin, GCSA executive director, who gave the response; Mal McLaren, veteran Canterbury Club supt. and conference co-chairman; James J. Tukesbrey, manager of Cleveland’s Oakwood Club and CMAA delegate to the turf show; and Dr. Floyd Corbin, lecturer and author, who was imported from Los Angeles to deliver what has come to be accepted as a kind of keynote speech for the conference. This one is always entrusted to professionals and usually is laced with sufficient fuming and thunder to get and keep the supts. stirred up for the 25 or 30 speakers who are to follow. Dr. Corbin, though, may have crossed up the convention managers. He spoke on relaxation.

Mal Digs Up Figures

In reviewing the history of the 39-year old GCSA, Mal McLaren made passing reference to the organization’s financial status in 1932. Dues income amounted to less than $2,200, and the show that year grossed $800. But the payroll barely exceeded $1,200 and total outlay for the year was less than $2,000, so the supts. ended up with money in the bank. Only in that era the banks were failing. The federal head tax for the entire organization for the year 1932 amounted to eight cents. That still had better not get back to Washington.

From 1932 through 1945, the GCSA did little more than mark time. But by 1949 it had grown to the point where it was bold enough to take its annual turf show into the Los Angeles Coliseum. It broke even in that venture. In 1953, McLaren said, the greenmasters’ group was being urged to build a skyscraper and there was talk of raising $1 million for research. But nobody panicked, and the GCSA went on growing steadily if not spectacularly. Today, the organization claims more than 2,000 members.

Supts. Have It Easy?

Jim Tukesbrey’s theme followed this line: “Why do you fellows grumble about being supts? You should get into club management and you’d really run into some king size headaches, complete with filter tips.” Here is what a manager does, said Tukesbrey: He runs a hotel, restaurant, night club and stages 30 or 40 parties a year. He supervises a huge housekeeping job. He is usually responsible for the swimming pool and tennis court and, at many clubs, for bowling, squash, curling, skiing and handball facilities. He often runs a playground for kids and what many members won’t concede, a day camp.

What does he hear all day? “The food is lousy and overpriced,” and “The drinks are watered.” Members who have just perpetrated a lousy round don’t take their sorrows to the pro or supt. They usually look up the club manager. “Half of the time,” Tukesbrey sighed, “it isn’t safe for a manager to step into a room where darts are being played.”

To convince the supts. they are better off to stay down in the maintenance building, the Oakwood Club manager cited these statistics: The manager handles an average of from 60 to 120 employees and is responsible for a payroll of $300,000 or more a year; He oversees
Len Hazlett, Sr., and his sons, Len, Jr. (1) and Ron, are a well known Cleveland area father and son trio. Len, Sr. is at Beechmont, Len, Jr. is at the CC of Cleveland, and Ron is at Avon Oaks.

the serving of from 50,000 to 75,000 meals annually; His office processes 100,000 members' checks a year and may send out as many as 5,000 or 6,000 statements. Somebody once figured out that a manager may make as many as 2,000 contacts with employees and members on a busy day, so he prays to keep complaints to well under one per cent.

**Occidental Yoga**

Dr. Floyd Corbin stated that until he was blinded in an automobile accident several years ago, he didn't know how to relax. While convalescing from the accident, he came to the conclusion that most people were in the same fix and he decided to do something about it. Out of this grew the conviction that it takes nothing more than an occasional pause to get regenerated. So, he developed several physical exercises that are designed to slow a person down long enough to get mentally recharged.

These consist of sitting down and writing "Joy" with the nose; reaching out with the arms and hands, then drawing them in and uttering a loud "Boom" in the process; deep breathing; and just sitting back for two or three minutes and contemplating nature. Somebody in the audience referred to Dr. Corbin's exercises as "Occidental yoga," an apt description.

"Tension," said Corbin, who has written five books on relaxation, "is pressure that is exerted against energy, or enhances it. There is nothing to worry about if you get butterflies in your stomach when things go wrong," he added. "The thing to do is strive for enough control of yourself to make them fly in formation."

**Second Session**

**GCSA 'Little Theater' Rolls Them in the Aisles**

Robert M. Williams, supt. of Bob O'Link GC, Highland Park, Ill., directed the Monday afternoon education session. His speakers' lineup included Robert C. Irwin, general sales manager of Ford's Tractor and Implement Div.; Stephen L. Frazier, who recently resigned as supt. at Woodland CC, Carmel, Ind., to set up his own irrigation and turf consulting business; Major Fred Bove, Southern California GCSA official and supt. at Brentwood CC in Los Angeles; and Tom Mascaro, president of West Point (Pa.) Products Corp.

Producer, Director, Arranger James L. Holmes, Midwest agronomist for the USGA, presented a one-act skit that was written and rehearsed in less than three hours and got rave acclaim from persons in the audience who fancy themselves drama critics. The title of the production was "How A Supt. Looks to the Members." Tom Leonard, supt. at River Oaks, Houston, played the role of a hapless greenmaster who tried to explain his completely defenseless position to a committee made up of grim Paul Weiss, supt. at Lehigh CC, Allentown, Pa., implacable Sherwood Moore, Winged Foot's well known turfmaster, and Tom Sams of the Audubon Club in Louisville, who might have forgiven Leonard for his shortcomings if he had just been a little more yielding in dealing with the imaginary club's women players. Dave Miller of Saucon Valley, Bethlehem, Pa., portrayed Leonard's replacement when the committee decided to gang mow its inept supt.

**New Thoughts on Old Theme**

Ford Motor's Bob Irwin presented some new thoughts on self-selling to the supt.s.
who have been urged by their national organization for the last decade or so to stop playing it shy and let members know how important they and their jobs are. What has to be taken into account, said Irwin, is that not more than two or three per cent of the members know what is going on in the maintenance department, not because they are indifferent but because they aren’t informed. Which brings up the question: “Who is to inform them?” Nobody but the supt. himself unless he has available the services of a publicity man who will do the job for him.

What should go into a self publicity program? Irwin outlined these factors: Periodic status reports; Year-end reviews; Proposals for improving the golf course; and Reports on local, sectional and national meetings.

The Ford sales executive concluded his remarks by saying that jobs like products don’t sell themselves; they have to be constantly promoted. It is imperative that a supt. think of his position as one that has to be continuously sold because of the annual turnover in club officials.

**How to Use An Education**

Steve Frazier, who got a degree in Botany from Butler University, studied turf management at Purdue and was taught to apply his scientific knowledge to course maintenance by Carl Bretzloff at Meridian Hills in Indianapolis, discussed the integration of education with practical turf work. His remarks were mainly addressed to younger supts. They were advised to correlate as much as possible their experiences on the new job with the fundamentals they had been taught in an effort to get a complete grasp of the many ramifications of turf management.

“One of the best things a young man entering turf work can do,” Frazier said, “is to study the man who has been around a while. Don’t be too proud to ask him questions even if they cover things that you feel you should understand, but don’t. If you make some mistakes, don’t try to hide them. If you can’t figure out why you failed, seek the advice of a person you are reasonably sure can give you some clues. Education ends when you start sweeping your failures under the rug.”

**Addressing older supts.** Frazier had this to say: “Take it easy on the young fellows who are breaking in. Sometimes they get a little overbearing, but this comes with youth. You have to remember that today’s youngsters are raised in the most accelerated age mankind ever has known. They are conditioned to want more at 25 than you perhaps did at 35 or 40. You have to bear with them until they start to decelerate and get their feet on the ground.”

**Name on Scorecard to Start**

Speaking on public relations, Fred Bove accused the supt. of being something of a “loner” who has stood aloof too long from the pro, manager, architects and others, and has hurt himself in doing so. “It’s time,” said Bove, “that we start to project ourselves. We can do it by not pushing too hard or stepping on any toes.”

One of the first things the supt. can do in his public relations buildup, Bove continued, is to get his name on the club scorecard. Another is to get within camera range when the TV people are filming a match at his club, and be ready to talk to the announcer if called upon to do so. A weekly, or at least, monthly meeting with the pro and club manager are not only desirable, but should be a must, the Brentwood greenmaster added.

To back up his claim that turfmen can

(Article continued on page 72)
The Graffis brothers, Joe, Sr. and Herb, and the Junior member of the organization, Joe II, again were hosts to fathers, sons and sons-in-law at a luncheon during the convention. It was the eighth consecutive year that the Graffis menage popped for the biscuits and Bourbon without wishing any speeches on their guests, 90 of whom put in an appearance.

Clarence Wolfram, Sr. is seen with Mine Host, Joe Graffis, Sr. (above). Warming the settee (at left) are Marion and Chester Mendenhall and the Weldins, Paul, Sr. and Paul, Jr.
Bove told how the Southern California GCSA staged a tournament last fall that still is the talk of the lower West Coast golf community. "I've had a hundred compliments on the way we ran that affair," said the retired Marine major. "Several club officials have asked me why we waited so long to get something like it started. We've already been asked by six clubs to hold the 1965 S.C.GCSA tournament at their course. That proves that people want to recognize us. So, the proposition is: 'Do we want to go to the trouble of being recognized?' "

**Satire and Beauty**

One of the best productions of the convention was offered by Tom Mascaro, who used his faithful projector in presenting one of his distinctive illustrated speeches. Mascaro was in a fine satirical mood as he led off with a series of slides that must have been assembled in Appalachia. Tornado-torn buildings, lean-tos and outhouses were suggested as models for clubhouses and outbuildings that are to be constructed in the future. Prototypes of home-made, steam operated equipment were shown along with several turf-tearing methods that are guaranteed to cut down on mowing. Mascaro then got in a plug for the GCSA pension plan by showing his collection of tombstones and graveyards.

But in a more serious and less grisly vein, the West Point executive switched to a "Courses Can Be Beautiful" theme. Formal and semi-formal gardens that have been planted at various courses throughout the country, the use of exotic plants, colorful landscaping and the beautifying of swimming pool areas were offered as examples of the artistry that can be introduced at a club. Mascaro's final suggestion: "Dig into local history and see if you can't come up with something that is worthy of an historical marker on your course. You'll get many miles of publicity out of it."

**Break Other Leg**

In the GCSA’s "Little Theater" production, Tom Leonard, who had fallen off a horse only a short time before con-

vention week and broken a leg, insisted on going on. Before the skit was over, the make-believe committee that had summoned Tom to explain why the cutworms, nematodes, red thread, gophers, etc., had crowded the players off the course, broke, in effect, Leonard's other leg.

You can imagine a bungler like Tom, who adopted the name of "Clem" for the drama, explaining an endless series of blunders to a cold, uncompromising committee member such as Paul Weiss. The latter's whip snapped, crackled and popped as he excoriated poor Clem. The audience hissed. But Clem was sacked and a new breed of supt., Dave Miller, who has a scientific explanation for everything, was hired to replace him. But don't be too sure that was a happy ending. Next year at Kansas City, you may find poor Dave sweating it out in Paul's sauna.

**Third Session — I**

**Agronomists Report on Turf Studies**

The third education assembly, held on Tuesday afternoon, was split into two sections. Research reports on cool season grasses were given at one, and the other was devoted to new developments in warm season turf. Bill Daniel of Purdue University was the moderator of the cool season session. His speakers included Eliot C. Roberts,
John McNamara, Chartiers CC, Crafton, Pa., Car- 
roll Hitchcock, Woodholme CC, Pikesville, Md. and 
Paul Weiss, Lehigh CC, Allentown, Pa., didn’t seem 
to be worrying about pythium when this photo 
was taken.

an agronomist from Iowa State Uni- 
versity; Richard R. Davis of the Ohio 
agricultural experiment station; and James 
B. Beard, assistant professor of agronomy 
at Michigan State University.

James B. Moncrief, USGA green sec- 
tion agronomist, presided at the warm 
season assembly. He presented Granville 
C. Horn, turf research specialist at the 
University of Florida; William B. Gilbert 
of the University of North Carolina’s turf 
research staff; and Ray A. Keen, professor 
of ornamental horticulture at Kansas State 
University, and an officer in the Central 
Plains turf foundation.

Ohio Governor Speaks
Ohio governor, Jim Rhodes, appeared 
briefly at both sessions. A onetime caddie 
and now a devoted golfer who would 
play every day if he could slip out a 
side door at the statehouse, the governor 
titillated the two audiences with several 
good golf yarns. Then, he told the North- 
ern supts. that they would win the full 
appreciation of their members if they 
were to take just one vacation between 
Aug. 1 and Sept. 1. For Southern green- 
masters, he recommended a January sab-
batical, although he conceded he never 
could figure out where people from the 
South go when they take wintertime 
leaves.

Turfgrass Response
Eliot C. Roberts, the scholarly Iowa 
State agronomist, gave an excellent de-
scription of the work in turfgrass re-
sponses that his school has been carrying on for the last two or three years. The project is based on the quality, color, density, vigor and bud count of various grasses in light of the weather conditions in which they grow, and the various irrigation, fertilizer and pre-emergence herbicide applications with which they are treated.

Improves in Hot Weather
The quality of bluegrasses, according 
to the Iowa State findings, improves in 
hot weather, is relatively stable with Astoria, but drops off in Pennlawn red 
fores planting. Color qualities of the 
latter two follow the same general pat-
tern between June and August.

Bud yield, upon which Roberts places 
great import, increases sharply in Astoria 
during hot weather, is cut in half in 
Pennlawn and remains about the same 
through June, July and Aug, where the 
bluegrasses are involved. Astoria and 
Pennlawn simply don’t tolerate dry con-
ditions during the warm months, although 
the bluegrasses seem to hold their own 
in semi-arid weather.

Other findings: Toronto bents ap- 
parently do best under both low and high 
nitrogen feedings in comparison with 
Metropolitan and Washington strains, but 
response among the three is exactly re-
versed when pre-emergence herbicide is 
applied. Both of these tests are based 
on bud count.

Describes Fertilizer Studies
Dick Davis, who has carried on exten-
sive fertilizer studies at the Ohio ex-
periment station for the last eight years, 
described the results of experimental feed-
ings of Common Kentucky and Merion 
with ammonia nitrate, sludge and urea-
form. In all applications of these nutrients, 
lime, phosphate and potash have been 
kept at what are accepted as adequate 
and equal levels. Response was judged on 
clipping yield, per cent of N in clippings, 
weed content of plots and color.

Results were shown through a series of 
charts based on April-August perform-
ance. Generally, ammonia nitrate gives a 
high initial yield, drops off toward July 
1 and then slowly picks up to reach a 
secondary high in mid-August. Sludge 
starts at a comparatively medium rate,
reaches its peak around July 1 and then slowly tapers off. Ureaform, slowest starting of the three, climbs steadily to a mid-July peak and then falls off slowly.

Davis conceded that there is some difference of opinion on the results of various applications. He noted that the curves on all the fertilizer release or availability charts tend to reach pretty much of a common level in August in the treatment of both Common Kentucky and Merion. This was also generally borne out in cases where three split applications totalling six pounds of both ammonia nitrate and sludge, and one application totalling five pounds of ureaform, were made.

Winter Injury Factors

Jim Beard of Michigan State discussed the causative factors in winter injury. He described several experiments in which both bents and bluegrasses were frozen at from plus 30 degrees to minus 10, and concluded there is no absolute temperature at which it can be said any variety of either type of turf is killed. Factors such as the hardness of the turf, rate of freeze, rate of thaw and post-thaw treatment have to be considered in trying to determine what are critical temperatures for the different varieties.

Among the bents, the Toronto varieties, Penncross and Seaside seem to be well inured to low temperatures, but Astoria suffers quite extensively when the thermometer drops below zero. Of the bluegrasses, Merion and Newport, according to Michigan State tests, hold up best in extreme cold weather.

Desiccation, low-temperature fungi, permanent snow cover, heaving and oxygen suffocation, Beard said, are the most common causes of winter damage. But it shouldn't be overlooked that a great deal of injury is caused by the following: Increased hydration level due to poor soil drainage; too heavy late fall fertilization; potassium deficiency; winter traffic; late fall cut below 1½ inches; a bad thatch condition; and probably premature spring fertilization.

Third Session II

Florida Researchers Investigate Nematodes

Speaking on the subject of nematode investigation at the South-Southwest section of the turf research program, Granville C. Horn said that little was known about nematodes until about 15 years ago when it was found that the parasites have an extremely destructive effect on grass roots. Three products derived from ethylene, heptachlor and dichloropropene were used in early control tests made at Mayfair CC in Sanford, Fla., and from
these Nemagon and Fumazon, both effective nematocides have been developed.

It was first thought that only Bermudas and St. Augustine were damaged by nematodes, but by 1955 it was found that they also infest bents and bluegrass, causing as much damage to Northern courses as those in the South. Samples taken at Florida courses have shown that as many as 25 million ring nematodes may infect less than five pounds of soil. In one study of a Florida green it was found that 95 per cent of the samples harbored nematodes, and 65 per cent of these were heavily infested.

In the last five years, the University of Florida has intensified its efforts to eradicate nematodes. At the moment, five major control projects are being carried on. The parasites feed on one another to some extent and soil protozoa also help to keep the nematode population in check. Where Nemagon has been used effectively, nematodes have been largely wiped out and turf roots have rapidly regained strength.

Describes Bermuda Studies

W. B. Gilbert reported on a Bermuda winter hardiness study that has been carried on at North Carolina State University for the last two years, and was prompted by the deep freeze that struck the Mid- and Deep South in 1962-63. Observations have been concentrated on temperature conditions, hydration, fertilization and management practices.

It is thought that exposed Bermuda can safely withstand temperatures as low as 5 degrees F. Where greens have been covered with straw, turf has not been seriously injured at as low as minus 20. The hydration level in both cases, however, must be in the medium range. It has been observed that when plant tissue is saturated, mere freezing temperatures can have an explosively harmful effect. The different types of Bermudas can be quite seriously injured by desiccation.

Nitrogen Imbalance Effect

A nitrogen imbalance, Gilbert pointed out, has about the same effect on Bermudagrass as it does on cool season turf. Best results are obtained if fall fertilization is carried out about three weeks before courses are overseeded in late Sept. or early October. Ample potash should be applied to give turf the hardness it needs to carry it through the winter. Phosphorus studies, as yet, aren't complete.

Aprons Hold Up

As for management, the N.C.S. turf researcher said that there isn't any doubt that Bermuda aprons survive freezing conditions much better than the putting surfaces. This, of course, is due to the insulation and deeper root structure that is built up from a cut that is consistently $\frac{1}{4}$ to $\frac{1}{2}$-inch higher on the aprons throughout the year.

Fourth Session

Irrigation Program Runs Into Overtime

Roy W. Nelson, supt. of Ravisloe CC, Homewood, Ill., was the chairman of this program in which all facets of irrigation were covered. His roster of speakers included John F. Schrunk, an irrigation consultant; Harry J. Mcsloy, supt. of Wilmington (Del.) CC; Donald E. Wright, supt. at Camargo CC in Cincinnati; Tom Topp of Bellevue CC, Syracuse, N. Y.; Walter Boysen, supt. at Sequoyah CC in Oakland, Calif.; and Ralph E. Engel, Rutgers University agronomist.

This meeting went the equivalent of 14 innings. It was obvious that the education committee was wringing the last molecule of water out of what is recognized as an extremely important subject.
But it shouldn't be forgotten that an education session, like a green, should be built with an eye toward runoff. However, the day was partially saved by Tom Topp, who told an amusing tale of his six-month search for a contractor who had agreed to supply a trenching machine for an irrigation installation, and then went into hiding, and by Don Wright, who gave a masterful description of how to install an automatic system.

**Faced with Water Crisis**

John Schrunk, who must have chosen his occupation with his tongue in his cheek considering his name, declared that if Americans don't soon wake up they are going to be faced with a critical nationwide water shortage. The Western half of the country, he said, already is imperiled and a kind of creeping drought is moving eastward. Shrunk, who has served as an irrigation consultant in the Middle East and is well familiar with the distress that lack of adequate water supplies can cause, pointed out that a fumbling bureaucracy is partly to blame for our threatened water crisis. No government bureau actually has control over conservation, he said, although several federal agencies are involved in it.

“**Our water problems stem from at least four factors,**” Schrunk explained. “There is a deep water shortage in addition to a ground water shortage. Salt water seepage threatens our coastal water supplies, and inland, pollution in heavy population areas, causes many problems. If we don’t find ways to save water by controlling evaporation, sealing against seepage and generally conserving this great natural resource, we are going to see the day when water will be rationed.”

**Recommends Use of Probe**

In discussing good watering practices, Harry McSloy pointed out that perhaps the best test of irrigation methods is the probe. If a rod used in probing penetrates easily to a depth of six inches, there is a correct amount of moisture in the soil. If it falls short, compaction can be suspected. If the probe goes much deeper than six inches, a tract is over-watered.

McSloy said that tees are more apt to become compacted than any other course area. To keep them in reasonably good shape, he recommended that they be aerified at least once a year and probed every week. Rainfall usually is adequate to take care of fairway irrigation except in the warm months when wilt threatens. Localized dry spots, however, should be treated the same as tees. In summary, the Wilmington greenmaster said a constant study of root health should be made because it is “what’s down under that counts.”

**Star of the Program?**

When Camargo’s automatic irrigation
Surrounded by charming women at a GCSA luncheon are Earl F. Yesberger (seated) and Bill Fannin. The ladies (from left) are: Mrs. William Fannin, Mrs. Ralph Locher, wife of Cleveland's mayor, Mrs. Walter Ward, Mrs. Yesberger and Mrs. Charles Winch.

Here is a happy band of relaxed greenmasters at the Hospitality Hour, held on Feb. 7 . . .

. . . and this group of golf writers seems to be taking all things in stride at the GCSA press luncheon.
system was put in a little more than a year ago, Don Wright, supt. of the Cincinnati club, took approximately 1,500 photos of the installation. He is donating 150 of these to the GCSA library. The 25 or so slides that Wright showed on the education program were exceptional examples of photographic art. In addition, Wright is an accomplished enough speaker to give travelog appeal to a workaday project such as an irrigation installation.

$10,000 Saved

He estimated that his club saved more than $10,000 in a year’s time in labor and water in switching from manual to automatic irrigation. More than five miles of pipe, 50 miles of wire and 400 sprinkler heads went into the Camargo system. There is an 80-foot separation between heads, which run exactly down the center of the 33-yard wide fairways at Wright’s club. Five pop-up heads, uniformly spaced, cover each green.

Wright supervised the irrigation construction project, but he entrusted the electrical installation to the best engineer he could hire. He advised supt.s who are planning going over to automatic systems to do likewise, pointing out that this amounts to long range economy. Camargo’s water system operates off two booster pumps and is controlled through a 12-switch panel.

Appearing along with Wright on the automatic irrigation panel were Walter Boysen, who described Western irrigation methods, and Tom Topp, who started out to tell how watering is carried on in the East, but got wrapped up in a humorous but woeful tale of an outside contractor who wasn’t able to find Topp’s Bellevue course for six months. “Maybe the poor guy did get lost,” Tom remarked. “We’re pretty far out in the country.”

Sold on Automatic

At Sequoyah CC, Boysen applies from ¾ to 2-inches of water a week, operating his system daily for as much as 12 hours. He advised against installing more than from three to five heads on a single control valve, and suggested that each side-hill outlet should be hooked up to its own separate valve. Poor results are obtained in installing automatic systems,

Boysen said, if care isn’t taken in the vertical placement of heads, keeping them below the ground surface to avoid damage. Good drainage also should be insured in the immediate areas surrounding sprinklers.

Of special interest to the audience were Boysen’s remarks on using the irrigation system to apply fertilizer. He advised against it, saying that it is only about 60 per cent efficient. In many instances, fertilizer is stacked up in one spot while another may not be touched.

The Sequoyah greenmaster concluded his remarks by saying, “You’ll never go back to manual watering after you have installed an automatic system. You may be discouraged at first with the new system, but allow for an 18-month breaking-in period and your troubles will be behind you.”

Get A Firm Contract

When Tom Topp finally got his automatic system installed, he was well pleased with the way it operated. Money was saved on both water and labor, and it was only necessary to set the controls every two weeks and let the system carry on thereafter. Bellevue’s system is geared to give a ½ inch per hour precipitation rate and operates 40-night hours each week.

In preparing to make an installation, Topp said that several things should be
taken into consideration. Course topography should be carefully plotted so that natural obstacles can be avoided or minimized. The entire irrigation route should be staked out in advance to speed up the building of the system once it is undertaken. Every effort should be made to avoid widespread damage to turf. There should be as much pipe prefabrication as possible and great care should be taken to select the proper sprinkler heads. Finally, and Topp emphasized this with some irony, if the installation work is to be contracted, the club and supt. should insist on an iron-clad agreement with the outside company.

And, speaking of irony, when the contractor finally located the Bellevue course and brought his equipment in, the ditching machine dug up no more than ten feet of turf when it broke down.

No Watering Formula

The final speaker on the irrigation program was Ralph Engel, an 18-year veteran of the Rutgers University agronomy staff and one of the most knowledgeable turfmen in the country. He spoke on watering as it is related to soil, climate and management.

Engel emphasized that watering isn’t done by the book or formula. There are so many variations in the moisture needs of turf, roots and soil that the watering process has to be continually studied. Its keynote should always be flexibility of application. In the final analysis, Engel said, watering comes down to the need for preserving life, and for providing a coolant when temperatures are extremely high. If a supt. grasps these two essentials, he is well on his way to understanding the whole purpose of watering.

Besides flexibility, the Rutgers professor listed several other things that should be kept in mind when a system is installed and actual application of water is undertaken. These are: A need for uniformity in distribution; the ability to slow down the application rate and even cut back on the size of droplets, if necessary; protection against uneven runoff; the application of correct quantities at all times; and ability to coordinate the watering system with rainfall. *(Turn to page 112)*
Fifth Session

Education Discussed by Young Supts.

The Thursday afternoon program saw three of the younger supts., Frank Dobie of the Sharon Club, Cleveland, Tom Burrows of Glencoe (Ill.) GC, and Richard C. Blake of Mt. Pleasant CC, Boylston, Mass., speaking on the transition from classroom to actually working on and supervising the maintenance of a course. They were introduced by Charles G. Wilson, sales manager and chief agronomist for the Milwaukee Sewerage Commission.

Wilson also was the moderator of a "Quiz the Experts" panel. The panel was composed of these supts.: Carl Bretzlafl, Meridian Hills, Indianapolis; Colin Smith, Shaker Heights, Cleveland; James E. Thomas, Army-Navy Club, Arlington, Va.; and Leonard Strong, retired, Saucon Valley, Bethlehem, Pa.; and the following agronomists: James R. Watson, Toro Manufacturing Co.; Bill Bengseyfield, USGA green section; and O. J. Noer and Fred V. Grau, both of whom are now serving as turf consultants.

Fifth Session

Education Discussed by Young Supts.

The Thursday afternoon program saw three of the younger supts., Frank Dobie of the Sharon Club, Cleveland, Tom Burrows of Glencoe (Ill.) GC, and Richard C. Blake of Mt. Pleasant CC, Boylston, Mass., speaking on the transition from classroom to actually working on and supervising the maintenance of a course. They were introduced by Charles G. Wilson, sales manager and chief agronomist for the Milwaukee Sewerage Commission.

Wilson also was the moderator of a "Quiz the Experts" panel. The panel was composed of these supts.: Carl Bretzlafl, Meridian Hills, Indianapolis; Colin Smith, Shaker Heights, Cleveland; James E. Thomas, Army-Navy Club, Arlington, Va.; and Leonard Strong, retired, Saucon Valley, Bethlehem, Pa.; and the following agronomists: James R. Watson, Toro Manufacturing Co.; Bill Bengseyfield, USGA green section; and O. J. Noer and Fred V. Grau, both of whom are now serving as turf consultants.

is that he usually can find an older supt. to whom he can turn when he runs into situations that are just a little beyond his scope. However, he shouldn’t make the mistake of thinking that the experienced man can or is willing to carry him forever. He should look upon this assistance as being no more than a fill-in until he learns to find the answers himself.

It All Fits In

Addressing his remarks to the young turf students in the audience, Tom Burrows said that several subjects that are offered in agronomy schools don’t seem to make much sense while they are being studied, but a student eventually learns that they fit into the big pattern. “Turf management curriculums are well designed,” Burrows stated, “because educators are practical and wise enough to seek the advice of men in the field in setting them up. A course isn’t thrown at you just to round out your schedule. Everything you are taught is important, as you ultimately discover.”

After leaving school, Burrows said, a young supt. should think of setting up some kind of a continuing education program for himself. This consists of keeping abreast of the newest developments in turf management, reading books and technical articles and attending monthly meetings of his local GCSA group. “Above all,” Tom concluded, “learn to play golf. There is nothing more ridiculous for a person who is around a golf course at least 325 days a year than not to know something about the mechanics and strategy of the game. It is impossible for him to be a well rounded supt. without this knowledge.”

Goes Beyond Technical Knowledge

Dick Blake, who received his turf education at the U. of Massachusetts and Rutgers, after serving with the Marines during the Korean war, said that mere technical knowledge is no longer adequate in course maintenance work. He pointed out that studies have shown that a supervisor spends one-third of his time communicating with people who work under or around him. So, that calls for the supt.’s devoting a good amount of time to developing the knack of reasoning logically, and then being able to express himself

March, 1965
so that the people with whom he deals understand him.

The Boyleston greenmaster also said that record keeping has taken an increasing amount of his time year after year, and that his club expects him to be completely aware of the cost and performance of the supplies and equipment he uses in maintaining his course so that he knows his way around when it comes to purchasing. “A young fellow who feels that mere knowledge of turf is enough to take care of him in our business,” Blake said in conclusion, “is in for a rude awakening. He is going to find that there are hundreds of things with which he has to be familiar if he is going to run such a big operation as a golf course.”

**Gets GCMA Scholarship**

Following Blake’s speech, Albert B. Frank, a student at Ohio State University, was presented a scholarship certificate by Charlie Wilson, on the behalf of the national GCMA. Frank, who will get his degree this spring in plant physiology has compiled an outstanding record as an undergraduate student. He plans to do research work in thatch control upon entering graduate school.

**What the Panelists Said**

Here are some of the panelists’ answers to questions asked of them by the audience:

- **Jim Watson** — Golfers have little conception of the enormous damage that can be done to grass if a course is opened too early in the spring. Compaction, too, can be severe if the ground is too wet.

- **Carl Bretzlaff** — If water is visible and the grass looks spongy, greens simply aren’t ready for play in the spring. If members insist on it, the supt. should request an additional budget appropriation to repair the damage that will be caused.

- **O. J. Noer** — Automatic sprinkling systems are fine for greens provided valves can be regulated for hand watering.

- **Leonard Strong** — Depressions and knolls are factors that have to be considered when automatic installations are made.
McLAUGHLIN

Range, Miniature,
Pro Shop Golf Balls

Made of finest materials, carefully supervised. Covers contain the new DUPONT NEOPRENE HC for maximum durability. Finest URETHANE enamel used.

WANT TO SAVE ON RANGE BALLS?

Have your culls rebuilt the McLAUGHLIN way. Exclusive process gives them same durability as new range balls. Covers and paint the same as our new range balls.

YOU CAN PAY MORE — BUT YOU CAN'T BUY BETTER!

HUGH J. McLAUGHLIN & SON, Inc.
614 N. Indiana Avenue, Crown Point, Indiana

Bill Bengeyfield — The best selling point for an automatic system is that it gives ten minutes when you want ten minutes. You can't regulate a night watering man. He may give you 40 minutes when you want only ten.

Colin Smith — I know of several cases where architects have condemned properties as possible course sites. But sometimes the owner is determined to build a course, regardless of the adverse recommendation.

Watson — If bentgrass is strong enough, it can withstand pre-emergence chemical applications. But, in effect, it's a race against time. Bent probably should be at least a year old before it is treated with pre-emergence products.

Fred Grau — No research man is yet willing to say that 18 fairways will escape unscathed when pre-emergence chemicals are used. Some are bound to show some injury, undoubtedly because the turf on them isn't hardy enough to withstand treatment.

Charlie Wilson — There may be a future for bluegrass and fescue fairways, but only where the supt. knows how to water them. Bluegrass may hold up all right, but I'm dubious about the fescue.

Noer — To convert to bent fairways in the Northeast, the pH level should be close to 6.5. Lime may be applied to bring it up. We seem to be going overboard on soil tests. Many supts. are getting their courses aerated by the soil testers. As I see it, soil tests should be developed for all elements and not just a few.

Watson — Dew is a fungi source and should be washed off. (This was in reply to a supt. who said that he read in a USDA Yearbook that dew delays the onset of transpiration, and should be allowed to burn off.)

Grau — Fertilizer tests made in non-irrigated soil may not be foolproof. There has to be enough water to activate microorganisms or all fertilizers won't show optimum release performance.

Noer — Regardless of what test charts show, the function of fertilizer is to grow grass. What may be overlooked in these tests is that different fertilizers don't react uniformly in all types of soil.
WANTED:
PRO SHOP DISTRIBUTORS

Our expansion program is going full blast! We need additional golf pro shop distributors to handle our exclusive line of men's and boys' Jockey sportswear, underwear, sweaters and hosiery. It's a hot line . . . spearheaded by a special "Tony Lema Promotion". It's a high profit line . . . nationally advertised and featured by leading pros. Let us know if you are interested.

Sixth Session

Trees, Electrons and Work Saving Ideas

Tom Leonard, still taking bows for his performance in the Tuesday matinee, conducted the final education program. He introduced the following speakers: Geoffrey S. Cornish, the Fiddler's Green architect, who spoke on course design; Roger J. Thomas, Jacobsen Manufacturing Co. sales manager, whose topic was “Work Smarter — It’s Easier;” C. Richard Skogley, associate professor of agronomy at the U. of Rhode Island, who discussed winter play; Arthur C. Drysdale, horticulturist for Sheridan Nurseries, Toronto, Ont., who gave a fine speech on tree selection; and Edward C. Nohava, supt. at Southview CC, West St. Paul, Minn., who told the greenmasters how to make their job easier by putting electronics to work. John J. Spodnik, supt. at Westfield CC, LeRoy, O. and conference co-chairman, summarized the education program.

Tees Being Overbuilt

After giving a brief and interesting summary of early course architecture, in which nature was given pretty much of a free hand and did a commendable job, Geoffrey Cornish described some of the things he thinks should be incorporated in or left out in the design of a golf layout. He has some reservations about the size of present day tees, some of which encompass more than 6,000 square feet. "The back tee areas are seldom used,” said Cornish, “even in tournaments. There often is a waste of space here. In most present day building jobs, we are usually struggling to find enough room in which to fit a course, yet many of us have a weakness for overextended tees. I’d rather see part of this space put into traps and greens.”

Of tree planting, vitally important in the strategic concept of a golf layout, Cornish had this to say: "It is always function first, and form second. Trees should be used as fairway cutoffs, not barriers. Greens should be surrounded by trees to give the player proper depth
GOLFTILE Spike RESISTANT INTERLOCKING FLOORING

GOLFTILE is Interlocking high surface - tension rubber flooring with soft inner body which springs to sharp pressures of golf spikes — recovers original shape without cutting or wear.

Approximately 1/2" thick 24" x 24" squares • Resists abrasion and cutting • Interlocking edges • Choice of colors • Easier to maintain • Top appearance • No cement or mastic required • No special skills required to install • Also available in same material is our GOLF STRIP RUNNERS, 36" width, Send square footage or floor plan for free estimate to attention of:

perception. Trees, however, should be set back at least 65 feet from greens, or maintenance problems are going to be encountered. There probably is a tendency to overplant trees on new courses to fill in that early, barren look.”

Other Cornish observations: Slopes around lakes should be at least one to six feet to permit easy mowing of the surrounding turf; Flare out car path terminals in a bell shape to give more exit area — it’s easier on the surrounding grass; Study the old Scot traps if you’re going to build bunkers. Nature shaped the sand pits on the highland and lowland layouts and was at its architectural best in handling these assignments.

Cut Down on Trimming

Roger Thomas, the onetime Jacobsen troubleshooter who has graduated to a sales manager position with that firm, emphasized that trimming, much of which is done by hand, is the unseen embezzler that dips into the budget appropriation and often manages to bankrupt it.

How is it possible to cut back on the funds that this largely unnecessary operation steals off with each year? Primarily by bringing the ground level flush to such sidewalks and roadways, and by not allowing turf to grow in places where it is out of bounds. Here are some recommendations that Thomas made:

Set out shrubs from buildings and put them in large beds so that it is easy to trim around them; Blacktop under fences and around posts so that vegetation doesn’t encroach in these areas; Spray retaining walls to keep weeds out; Get rid of fruit trees, if possible — they attract vandals and dirty up the course at harvest time; Don’t use logs as parking lot stops because they are dirt catchers.

Thomas also made another suggestion that the supt. undoubtedly will have to explain to his members so that they won’t think the blood that flows to his brain has been shut off: “After floodwater has receded, turn on the sprinklers. The reason: It unclogs the irrigation system.”

Against Winter Play

Dick Skogley, who teaches turf man-

KARGO
GOLF CAR
BATTERY

An entirely new process, the only major advance in internal battery design during the last decade, encases the plates in a protective polyethylene jacket that provides superior performance in every Kargo Sure Drive battery. This new, exclusive method cushions the plates from shock and because no plate edges are exposed, the danger of internal shorts is eliminated completely. The Kargo battery with "Poly-Klad" protection will out-perform any conventional type battery because it is especially designed for rugged service under severe conditions.

Watch for This

Every golf club in the U.S. is being mailed a form card on which space is provided for names and titles of operating personnel who should receive GOLFDOM. Unless this card is filled out and returned, we cannot mail GOLFDOM to these people.

Our circulation auditing association requires that the list of persons to whom GOLFDOM is mailed be kept up to date. Without this updated information we are instructed to stop mailing the magazine to names on our old list. To make certain that your 1965 officials and operating heads receive GOLFDOM, please fill in the form and mail it today!

If your club failed to receive this card or misplaced it — use the form on page 200.

management at Rhode Island University, repeated some of the things that had been said earlier about winter and early spring play, but he added this thought: In most cases when golfers want to rush the season, alternate freezing and thawing is going on. Necessary soil granulation is taking place then and if it is disrupted, serious compaction problems that may persist through the season, can be induced.

Turf, Skogley continued, is particularly vulnerable when it is coming out of the dormant stage. Grass blades are more easily bruised at this time than any other. Turf attrition can be extensive in the transition period between winter and spring because the grass is struggling at this moment for a firm root hold, and it needs this traffic-free interval in which to become solidly re-established. Probably most important, it shouldn't be forgotten that the turf has undergone some degree of winter damage and it needs a warming period in which to recuperate without being subjected to heavy traffic.

Use Wider Variety

Arthur C. Drysdale, the Canadian horticulturist, used slides almost exclusively in describing the panoply of firs and pines and deciduous trees that are available for golf course planting. He noted in passing that supts. and others connected with club tree planting programs generally don't use too much imagination in their selec-
PERFORMANCE
CHARGERS BY MAC!

Here's the complete line of battery chargers . . . latest designs and features backed by 18 years of quality production.

MODEL 500
Two Rate Charging with Transistorized Relay

MODEL 1500
Single-Rate Charging with Ferro-Resonant Type transformer. Excellent regulating characteristics plus high efficiency and power factor. The DC output current will vary less than 10% with a change in the AC line voltage of 5%. This is a convection cooled Charger.

MODEL 750
Single Rate Taper Type

These and other MAC Battery Chargers are available for immediate delivery . . . in plenty of time for full season protection. Send for bulletin showing all models and details of outstanding MAC features.

Hold Public Course Seminar at GCSA Convention

A public course seminar, conducted by Rex McMorris, executive director of the National Golf Foundation, was held in conjunction with the GCSA convention.

Speakers included Joe Duich of Pennsylvania State University, William Gallagher, Glen Ellyn, Ill., village administrator, Herb Davis, Omaha, Neb., golf course owner, R. E. Watson, Benjamin Lewis Co., Chicago, and Bill Lyons, owner of a course in Canal Fulton, O.

An article covering the seminar will appear in the April issue of Golfdom.

From the evergreen family, Drysdale recommended these species: Silver fir in preference to blue spruce; common cedar for hedges; junipers for the clubhouse area; Norway and Serbian spruce; Austrian and Ponderosa pine; and possibly the Don redwood, a deciduous evergreen originally imported from China, which is fast growing but nevertheless hardy.

Drysdale suggested that supt.s might be better off to avoid planting these species: White pines, which must be frequently pruned for relatively luxurious growth; Hemlocks in areas north of the Great Lakes; and Douglas fir, fairly susceptible to disease.

Deciduous Tree List

As for deciduous varieties, Drysdale offered a rather bewildering number. He classified them as to species that should be planted on the course, and those that probably should be confined to the clubhouse area. His list of recommended course trees include: Norway maple, of which there are several varieties; Crimson King; Sugar maple, for its beautiful fall coloring; Birch; Purple beech; Gingho, Shademaster and Sunburst locusts, both new species; Pyramidal oak; Laurel and Linden. Not recommended: Silver maple; Horse Chestnut; Sycamore and Weeping Willow.

Low growing trees, recommended for
Light Weight—One Hand

RAKE-Ezee SAND TRAP RAKE

Short handle, light weight. Golfer can easily rake trap while holding club in hand.

Sturdy, attractive, won’t rust, yet low in cost. The Rake-Ezee is fully guaranteed to give satisfactory service under normal use. Tough plastic head available in 14” and 22” sizes. See your distributor, or write.

The bright, yellow-handled RAKE-Ezee Rake flags attention, reminds golfers to rake trap. Stands erect on blunt metal point.

the clubhouse grounds, include: Amaranches, which flowers for a short time and is quite disease resistant; Yellow wood, which gives heavy shade; Hawthorn; Russian Olive; Flowering crab; and Weeping mulberry, a vinelike shrub.

Slave to the Electron

The final speaker on the four-day program was Ed Nohava, who was educated to be a radio and TV technician, but succumbed to the lure of turf after moonlighting for a year on a golf course. Appropriately, Ed’s thesis was that a supt. is a slave to the electron.

“You can’t get through the day,” said Nohava, “without depending on that infinitesimal particle of negative electricity to do at least a dozen jobs for you. At the course it works for me in the burglar alarm system, two-way radio, intercom, public address system and even in a Bullhorn. I have a moisture sensor and use an electronic pH meter. Underground pipes are located with a mine detector and out in the garage we have an electronic ignition analyzer and several other gadgets that are electronically activated.

“After work, I use an electronic lure when I go fishing,” Nohava continued, “but they almost ruled me off the job when I told them I had an idea for developing an electronic putter. One of these winters I plan to wear electronic underwear that I have had in mind to design for a long time. I’m so completely addicted to the electron that I might as well start wearing it next to my skin.”

Mrs. Vare Gets Jones Award

Mrs. Edwin Vare, Jr., Bryn Mawr, Pa., the former Glenna Collett, was named the 1965 winner of the USGA’s Bob Jones award. She received the citation at the USGA’s annual meeting in New York from Philip H. Strubing, chairman of the Jones award committee. Mrs. Vare won six Women’s Amateur championships and twice was the runnerup.

Chicago Lighting Institute, 140 S. Dearborn st., Chicago, will conduct a golf course lighting clinic in its offices on Apr. 12 from 1:30 to 4 p.m. The registration fee is $3.50.
