The GCSAA goes west

San Francisco plays host to 39th annual conference • Miami Beach named 1969 site • Brandt elected president • Donaldson wins trophy

by Desmond Tolhurst
Senior Editor

A fine attendance and well-balanced program made the 39th Annual International Conference and Show of the Golf Course Superintendents Association of America one of the most interesting and valuable business meetings of the year. Total attendance at the San Francisco Hilton was 2,902, which includes industry representatives and the superintendents’ ladies. This figure compares very favorably with the 3,008 figure for last year’s meeting in Washington, D.C.

James Brandt, superintendent, Danville CC, Danville, Ill., was elected GCSAA president, with outgoing president, Walter Boysen, superintendent, Sequoyah CC, Oakland, Calif., becoming president emeritus. The new vice-president is John J. Spodnik, superintendent, Westfield CC, LeRoy, Ohio. Robert V. Mitchell, superintendent, Sunset CC, St. Louis, Mo., was appointed to the position of secretary-treasurer.

Superintendents elected directors this year were Stanley Clarke, Jr., La Gorce CC, Miami Beach, Fla., and Clifford Wagoner, Del Rio G & CC, Modesto, Calif. Continuing as directors are Norman W. Kramer, Point O’Woods CC, Benton Harbor, Mich., Richard C. Blake, Mt. Pleasant CC, Boylston, Mass., and Keith Nisbet, Westview GC, Aurora, Ont., Can.

The site for next year’s conference and show was also determined. The ’69 meeting will be held in Miami Beach, Fla., at the Hotel Fountainbleau, Jan. 19-24.

As is customary when the super’s conference is held in the sunnier climes, this year’s meeting featured golf on the agenda as well as the equipment show and educational programs.

Of interest at the superintendent show

Editor’s note: Bob Williams, one of the country’s leading golf course superintendents, was asked by GOLFDOM to tour the exhibit area at the recent GCSAA convention in San Francisco and report to our readers what he saw. Here are his notes on what was new and important at the convention.

Selective herbicides, both pre-emergence and post emergence are becoming more noticeable in the chemical field . . . New tire changing tool for golf car tires—this has been quite a problem for clubs. . . . Automated irrigation advances were notable, particularly in the area of controls—the clubs are being offered finger-tip control for complete course irrigation in a way never dreamed of a few short years back . . . Soil moisture measuring devices are beginning to show up—a valuable tool for the superintendent . . . Two companies showed their techniques and tools for pulling plastic pipe through the soil with practically no disturbance to the surface. They claim to be able to pull pipe and or wire through the soil up to a distance of 500 feet and with a diameter of up to two inches. This looks like an idea whereby automatic irrigation installations can be installed more economically and with less disturbance to the golfers. Looks great . . . Irrigation pipe advances continue—improved plastics and cement mortar lined cast iron came in for special attention . . . New automated irrigation concept that uses a sequence valve system unit that depends on pressure changes for activation—no wires or hydraulic lines to bury—watch for this one in the future . . . Small golf car type trucks are becoming very popular on the scene of course maintenance—several new models were shown with many new features—prices ranging from $1,000 to $2,500 depending on equipment . . . A notable change this year, two motor companies exhibited their small engines. A new trend for superintendents is the replacement of small motors rather than repairing them when major overhaul is indicated. Most superintendents say about two years
sessions. The USGA Trophy, awarded to the champion GCSAA superintendent, was won by Art Donaldson, Capilano G & CC, West Vancouver, B.C., Can. The GOLFDOM Trophy, for the winning superintendent-pro, went to Paul Schurtz, Worthington Hills CC, Worthington, Ohio. In the senior division, the O.J. Noer Trophy was won by Robert Prieskorn, Western G & CC, Detroit, Mich. The ladies’ champion was Mrs. Martha Babson, wife of Aubrey Babson, superintendent at Marin CC, Novato, Calif.

As usual, Ben Chlevin, executive director of the GCSAA, and his band of merry men—and girls—did a fine job of keeping everything on schedule. Our hats are off to him and his great staff including Larry Green, Tom O’Hara, Dorothy Andrews, Rita Engess, Kathy McLaughlin, Marietta Brandt, Donna Thompson and Pamela Williquette. Also, bouquets to the host section of the GCSAA, who worked so hard to make the meeting the success it was.

The opening session got off to a fast start with a fascinating talk by Harold E. Myers, dean of College of Agriculture, U. of Arizona, on the topic, “The world food supply.” He pointed out that the theory of Thomas Malthus (1766-1834)—that population would soon outstrip the means of feeding it, if it were not kept down by vice, misery or self-restraint—is still very much on demographers’ minds these days. Today, world population is around three and one-half billion. By the year 2,000, it is expected that it will reach about 6 billion—Continued on page 82

is the expected life for regularly used small units—high cost of labor and parts is involved here... The sod producing equipment shown at the meeting indicated some tremendous advances. Machines were on exhibit for cutting, conveying, rolling and hauling sod... Sod producers held their first annual national meeting in conjunction with the GCSAA... In the mower lines, there seems to be quite a move toward improved units for the refined cutting areas of greens and tees where the clippings must be collected... A new three unit riding greens mower to be available this fall was introduced. It has hydraulically operated reels... Multiple unit, self propelled mowers appear to be the “in” item... There was a showing of a new triplex model complete with catchers for refined cutting of 3/8 inch to one inch... New model fairway unit with ten blade reels and a reduced width to 26 inches for better contour mowing of fairways, down as low as ½ inch cut... In the power sprayer line, the fiberglass tanks and self propelled units were notable... Combination sweepers and dethatchers are getting more sophisticated every year—a number of new models were shown by several companies... Leaf blowers, mulchers and pick-ups are gaining popularity and refined models were obvious... A new tool originated by superintendent A1 Linkogel of St. Louis—a sprig or plug planter for bents or bermuda grass... Improved new greens whipping pole of combination fibre-glass and aluminum. Looks like they have something worthwhile here... With the development of so many new courses, stone picking can be a problem. This too, has been automated by a stone picking device on display... Artificial turf made its debut this year. The supers have been keeping a keen eye on this and seem to be alert to the ever changing patterns of course demands. Who knows what our courses will look like in 25 years, a most interesting new development... A new product for display was brought out. A ceramic coated, fractured rock. This material is dark blue in color and is offered as a consistant graded granule for traps. While it has promise, the superintendents hate to see the white or yellow sand go by the wayside... Generally speaking, our show of equipment and materials was the most advanced and productive ever. All the modern trends were obvious to the supers in attendance—labor saving equipment and tools to do the old jobs better!
Now you can effectively control MOSQUITOES and other flying and crawling insects around your club-house and inside.

With HUB STATES ECONOMICAL MALATHION FOGGING CONCENTRATE

Hub States MALATHION FOGGING CONCENTRATE is unequaled for effectiveness in killing mosquitoes, flies, fleas, gnats, chiggers, mites, moths, wasps, hornets, ROACHES of all species (even resistant strains), ants, silverfish, beetles, spiders, crickets, and other insects . . . . yet it is safe for use around foods, facilities, plants and animals. Low in cost. Just mix 1 gallon of Hub States MALATHION Fogging Concentrate with 25 gallons of No. 2 fuel oil. Leaves no stains; low odor.

1 gal. can . . . . $12.90 per gal.
5-gal. pail. . . . 11.33 per gal.

A powerful professional fogger that's small enough to put in a car trunk and easy to carry. Blankets thousands of cubic feet of area in minutes with a fine dry fog. Billions of microscopic droplets of lethal Malathion insecticide penetrate into every crack and crevice in a building, killing even the hiding insects. Output up to 7 1/2 gallons per hour. Can be adjusted from a fine to a coarse fog. No special training required to operate it. $372.00.

a rather frightening increase.

However, Myers concluded that, on the whole, he had faith in the ingenuity of the human race to out-run the Malthusian doctrine for many more generations to come.

Warren A. Bidwell, superintendent, Philadelphia (Pa.) CC, then went into the area of public relations as regards the superintendent. He said that just as the front door of a man's home is the symbol of his hospitality, so the appearance of the club, and the clubhouse grounds should be made attractive enough to give a "welcome" feeling to all who drive onto the club property.

"The effects of temperature and light on vegetative growth" was the topic of the next speaker, Victor B. Youngner, associate professor of agronomy, U. of California.

S.J. Richards, professor of soil physics, U. of California, discussed water usage, and in particular the use of soil water sensors as a guide in irrigation management. He cited the good performance of an automatic irrigation system equipped with a tensiometer-type hydrosat compared with a manually set system in an experiment conducted on the campus of the U. of California in 1961. He also discussed another demonstration when model green profiles—one built to USGA specs, the other the same except it had a 24-inch layer of fine sand between the planting mix and the coarse sand and gravel layers—were compared to determine water storage properties by means of tensiometers located at two and ten-inch depths.

Root competition between trees and turf was the topic of the next speaker, Carl E. Whitcomb, research associate, Department of Ornamental Horticulture, U. of Florida. Whitcomb pointed out the results of an experiment conducted at Iowa U. last year.

Because of the differences in root growth, shallow or surface rooted trees such as silver maple, sweet gum, cottonwood, willow, Australian-pine and others should not be planted near greens or tees. Although these trees are affected...
SUPER SECUR COMFORT STATIONS

MAKE BUSHES OBSOLETE

Maintenance is practically obsolete, too! Super Secur Comfort Stations are constructed of durable galvanized steel, with unbreakable cast aluminum fixtures for long lasting, maintenance-free operation.

A truly rugged building for a golf course, park, playground, or any area where heavy use or vandalism is a problem. Feel secure, buy Super Secur!

Choose from standard model comfort stations, concession stands, or storage buildings.

VANDAL PROOF!

more by turf competition when planted, if they survive, they will eventually create severe root problems due to root proliferation in these intensive maintenance areas, making them "hard" and difficult to maintain.

The next talk posed the question: Is your swimming pool an asset or a liability? In the chair was J. Henry Mohr, president, Nor-Cal Engineering Company, Redwood City, Calif., representing the National Swimming Pool Institute. Mohr told how the institute, a 1,300 company-strong trade association, has two excellent manuals available entitled "Swimming pool operations manual" and "A swimming pool engineering manual." However, he emphasized that the main thrust of the association’s educational program was to convince managers that the swimming pool is a valuable physical asset and deserves responsible and knowledgeable handling.

With the growing practice for a golf club to have a tennis club membership, the problems of court maintenance are becoming of increasing importance to the superintendent. Dennis Van der Meer, tennis pro at the Berkeley Tennis Club, Calif., talked about this to the assembled greensmasters.

Many clubs in Canada and the northern parts of the U.S. have long recognized the need for year-round operations. Establishing curling facilities have enabled them to make this transition, said David Gourlay, superintendent, Thornhill CC, Ont., in his talk on this ancient sport.

Where does the superintendent fit into this new operation? In many cases, he will be asked to increase his responsibilities by supervising the ice making and maintenance operations.

Gourley concluded by citing the governing body of the game, the United States Curling Association, as being a prime source of information to a club desirous of starting a curling program. There are also professional curling consultants and help from the ice-making industry. "Recognizing turfgrass diseases" was the subject of the next talk, by
Stan Frederiksen, manager, Turf Products Division, Mallinckrodt Chemical Works, St. Louis, Miss., and John L. Weibling, professor, Agricultural Extension Department of Plant Pathology, U. of Nebraska. The speakers emphasized that accurate turf disease identification sometimes isn’t easy. Often, the complete facts may be difficult to get, especially when turf plugs are being dealt with, after being subjected to varying conditions during lengthy travel periods. Under any condition, there may be an honest difference of opinion as to which of two organisms is doing the damage—and perhaps one or both are.

The speakers recommended that the superintendent stock his library with good books on turf diseases. Dr. Malcolm Shurtleff’s “How to control plant diseases” is excellent. They also recommended Dr. Houston Couch’s fine new book “Diseases of turfgrass.”

John P. Dunlap, superintendent, Oakwood CC, Cleveland, Ohio, gave a talk on proper chemical application. He said that in the last few years, superintendents have had to become more efficient because of rising labor costs. However, don’t be trapped into thinking that the easiest and quickest method is always the best way. Quality of chemical application must always be maintained.

Dunlap then discussed the equipment and methods he uses at his club. For greens and tees, he now uses a turf truckster, fitted with a boom for spraying and a rotary spreader for dry chemicals. His old method of spraying took five to six hours to spray 18 greens, while with the new method all 18 greens can be finished in just two hours.

Labor savings on green fertilizing are just as impressive. Dunlap used to apply dry materials by means of bag type cyclone spreaders. Fertilizing the greens this way needed three men about four hours. One man and the truckster can now do this in one to one-and-a-half hours.

On fairways and roughs, Dunlap still thinks that a good 20 to 30-foot boom sprayer is the best. Wind drift is cut to a minimum and it does a good job of applying the...
chemicals evenly and accurately. He objects to blowers because of the amount of chemical lost because of wind drift. The use of a broadjet spray head is a possibility, he said, but here again only a calm day would be suitable for its use.

The introduction of rotary fertilizer spreaders has greatly speeded up fertilizing fairways over the use of the drop type spreader, Dunlap said. Also, the rotary spreader pretty much eliminates the chances of overlapping and missing.

Harry C. Eckoff of the National Golf Foundation went into the trends in golf course development. He said that the shortage of available mortgage money at reasonable rates which has prevailed during the past two years and the increasing costs of construction are having their effect on golf facility development. New course openings for 1967 are down 8% from the 1966 figure. New construction starts are down 17%.

"Golf courses for the public" was discussed by Richard Haskell, director of golf, City of Seattle, Washington. Haskell said that in general the pub links golfer wants a course that he can be proud of. It should be in good condition, not too hard, but one that can be made tough enough to test the expertness of the good golfer.

Richard A. Sincerbeau, golf course planner, Ellis, Arndt and Truesdell, Inc., Flint, Michigan, went into the question of adequate records for good control and budgeting. Records, he said, can be the basis for necessary advanced planning on past performance, as well as for day-to-day operation.

Ames discussed the service customers should expect under a proper warranty program. He also stressed that customers should let the manufacturer know how his product is performing, as this information is essential to the manufacturer to help him improve the product. Elstad said that establishing a program for preventive maintenance was the most economical and efficient method of keeping the equipment running. Thomas also stressed preventive maintenance, but added that the level of maintenance was the key to the life span of equipment. An average level of maintenance will yield an average life from a piece of equipment. A high level of maintenance, a longer life.

There was then an excellent and interesting demonstration of two-cycle and four-cycle engines conducted by Kenneth Weill of Jacobsen, James B. Holsen of Kohler and B. H. Robinson, Wisconsin Motor Corporation. The session concluded with a spirited panel.

WILSON scores again with vertical bag racks

The new, improved Wilson vertical golf bag racks are distinct additions to any club house. These racks save valuable space, and by providing proper ventilation, improve air circulation around the bags and throughout the area. They are easily installed and require no maintenance.

Available in either single or double tier form, their welded frame and sturdy 2" by 4" base provides essential rigidity. Sloping shelves are adjustable for maximum flexibility, and the lower shelf is removable for ease of cleaning.

Tubular rod dividers, with capped ends prevent damage to bags and allow arrangement of either 9" by 12" or 12" by 12" spaces to accommodate 20 bags.

Wood or steel panels are available to enclose ends of ranges for improved appearance, and a variety of colors provides for complete harmony with any decorative scheme.
advantages of the first method. Also, the lack of construction coordination could result in serious problems unless the contracts are written with explicit requirements.

A third method is a professionally designed system by a qualified engineering firm, combined with the installation being performed by the successful bidding contractor. The contractor's work is supervised and inspected by the engineering firm who represents and protects the interests of the owner.

It was Hogan's opinion that a truly successful installation requires a team of specialists. They are: 1. club committee; 2. golf course superintendent; 3. professional designer; 4. installation contractor; 5. material suppliers. Only such a team can come up with the best system for the individual club.

Cost analyses were then presented by Major Fred Bove, superintendent, Brentwood CC, Van Nuys, Calif, (representing the Southwest), Jerry M. Murphy, su-

For you whose work includes the care of fine turf — cemetery, golf course, or park — we have a utility trailer specifically designed for your special needs. Roll-Dump hopper holds a cubic yard . . . or you can take off the hopper and put on a flat bed or wagon bed. Terra-Tires safely carry heavy loads without rutting turf. Champion Doo-All is a rugged trailer designed for years and years of hard work.

perintendent, Somerset CC, St. Paul, Minn. (North), and Edmer E. Easley, superintendent, Wichita CC, Kansas (West).

Bove outlined how his club converted the quick-coupler system around the green to a semi-automatic type. This cut the irrigating staff from two men to one, which in turn off-set the cost of the materials. Bove said that future annual savings in irrigation labor costs would be approximately $6,000.

Murphy told how the quick-coupling system in use at his club was converted to an automatic satellite system. An analysis of the labor and operating cost of the two systems shows that the automatic costs $1,430 over a period of three months (July, August, September) in comparison with the cost of $2,890 for the quick-coupling—a saving of $1,460.

Easley discussed the savings effected at his club replacing a manually-operated system with an automatic system. The manual system, completed in 1951, cost $55,000 to install. The automatic system, completed last year, cost $106,000. (This did not include the cost of a contractor to install the system—say $20,000 to $30,000—as Easley did it himself.) Easley calculates that the labor cost savings alone will pay for the $51,000 differential in less than five years.

The afternoon session was devoted to most informative talks on the hardware that goes into an irrigation system. Sprinklers were discussed by James Robinson, general sales manager, Skinner Irrigation Company, Troy, Ohio. Different kinds of pipe and their characteristics were covered by Arthur W. Perry, sales manager, Ethyl Corporation, VisQueen Division, Baton Rouge, Louisiana. Jack Nees, president, Moody Sprinkler Company, Inc., Arcadia, Calif, talked about timers and Jerry Rossiter, assistant to the president, Buckner Industries, Inc., Fresno, Calif, described the various types of hydraulic valves and tubes.

Electric valves and wire were the subject of the talk by Ed Shoemaker, sales manager, Eastern Rain Bird Sales, Inc., Peoria, Ill. (Central), and Tom Pyle, district sales manager, Southwestern. Both men emphasized the importance of adequate layout and planning in the installation of electric systems.

The evening session was devoted to the chemical aspects of irrigation. Jack Nees, president, Moody Sprinkler Company, Inc., Arcadia, Calif, presented a paper on the use of fertilizers in irrigation and briefly discussed the chemical aspects of the system itself. He also made some general observations on the design of irrigation systems. The meeting was concluded with a discussion of the future of irrigation in general and the future of the Irrigation Association of America in particular.
THE FINEST GREENS ARE PLANTED WITH Warren’S STOLONS

Perfect even texture and color are maintained with clean, pure-strain WARREN’S STOLONS. Greens planted with seed do not hold their uniformity of color and texture as well as greens planted with stolons. They are apt to develop a "patchwork" look after a few years.

The cost of STOLONS over the cost of seed is insignificant compared to the overall cost of the establishment of a golf course. Why be satisfied with anything less than perfect greens only obtainable from pure-strain STOLONS.
