The John Bean Rotocast® provides better spray coverage of greens, fairways, roughs...or into wooded areas for mosquito control. Coverage from a distance...not tracking through...an ability your greens committee will appreciate. The Rotocast combines the best features of both air and hydraulic spraying, and in most cases reduces water use. You can apply insecticides, fertilizers—or even windrow leaves away—faster and more easily. Ask for a Rotocast demonstration. It will pay off for you.

Fairway and green fertilizing. Weed, brush and mosquito control. Tree spraying. Adaptability for high-pressure hand gun "spot" spraying. John Bean sprayers will do your job better. Write for a free sprayer catalog.

Grau
continued from page 22

ture at dozens of institutions in the United States and Canada. In 1970 he and Mrs. Burton visited Australia where they took scores of fascinating pictures, which were shown to the 200 banquet guests at the Tifton conference in April.

Suffice to say that the world of warm-season turf has advanced immeasurably because of Tifton and Dr. Burton.

Q—We have converted to the triplex system of putting green mowers and we are very pleased. One thing worries us, though, and that is the possibility of losing turf as the result of a blown-out hydraulic line or hose. If this should happen, what might be done to save the turf? (North Carolina)

A—Two excellent remedies were discussed at the Tifton conference: 1) Douse the affected area with a wetting agent and use water copiously to flush the offending oil off the green. 2) Spread topdressing thickly on the oil slick and leave it on for a few hours, then remove it. The oil will be absorbed.

Calcinated clay also may be used because it is a good "oil soaker-upper" on garage floors. The detergent flush may be used after most of the spill has been removed by the dry method.

Q—Our company plans to build a golf facility in the Caribbean where water is at a premium. In considering the several grasses available for fairways, we have thought that common bermudagrass seed might be suitable. Could we develop quality fairway turf from seed? (Pennsylvania)

A—In the frost-free climate of the Caribbean you may expect to develop excellent quality fairway turf from seed. It will require occasional irrigation and generous fertilization during the first two years, especially. Economy of seed may or may not be a factor but the cost of common bermudagrass turf from seed will be significantly less than vegetatively planting a monoculture of a specific strain or variety. If cost is not a consideration, and if highest quality and uniformity are paramount, then consider vegetating the fairways to a selected variety (Tifway, Ormond or even Tifgreen).

Q—For years we have been overseeding our bermuda putting greens with (Continued on page 26)
WE 5

AN ANSWER TO CLUB OPERATION PROBLEMS

WE 5 is the Club Division of Wilscam Enterprises, a firm totally involved with the hospitality industry. WE 5 specializes in helping solve the internal financial/management problems of the private club. For instance, let's say your club, like so many these days, is faced with rising costs, competition, and diminishing returns. Here's how WE 5 can help: First, the problem areas are identified. Then a plan of action is tailored to fit your situation. WE 5 comes up with the remedies and implements them—in all areas, including food, beverage, and service, golf club operations, membership communication, and financial management. Most important: WE 5 has follow-through and depth with the resources of an experienced, club-oriented, support organization. Perhaps WE 5 can be of help to your club. WE look forward to your inquiry.
