When GOLFDOM approached Charles Byrket with the idea of doing an article based on his experiences with the Indiana golf cooperative, it was apparent from the outset that he represented one point of view and we another. After reading the article (“Golf Co-ops: A Case Study,” May, p. 28), no one can deny that Byrket merits praise for his efforts, perseverance and personal sacrifice in attempting to turn theory into successful reality. It also should be clearly noted, that despite the obstacles and frustrations he experienced, Byrket still believes, given a certain set of circumstances, that the golf shop co-op can work.

Among the requirements he stresses are: proper financial backing, continual legal advice, qualified full-time person or persons to operate the co-op offices and warehouse, and full cooperation of the participants.

GOLFDOM believes that, even with all of these requirements, the concept cannot succeed in the golf market because of one seemingly simple, but vital reason—the differences in clientele from pro shop to pro shop. What is great for one pro shop is anathema for another. The golf professional, too, has many levels, age groups, life styles and tastes. Many professionals favor one manufacturer’s line over another, and any savings in costs are not going to budge them. For a cooperative to supply the golf professional with in-depth inventories in all categories would require a staggering capital investment, which professionals to date have not indicated a willingness, or an economic capacity, to make.
