GAS SHORTAGE:
Regional Reports

west
by DON CURLEE

SAN FRANCISCO—Golf businessmen in the West are taking the fuel shortage seriously, but in stride. Few of them have been directly or intensely affected enough yet to know if their precautionary thinking and planning are correct.

Discussions with them about it raise at least as many happy thoughts as talking about burial plots or missed putts.

One tells how a golf course construction project was held up because delivery of PVC irrigation pipe (a petroleum derivative) was long overdue. With the trenches all dug, the site resembled an antitank barrier, and practically no substitute work could be completed until the pipe was laid.

Everyone contacted here believes the most serious threat to golf operations will be indirect—the reaction of their clientele to restricted supplies of gasoline.

This translates to reduced play, particularly at more remote resort type courses. Managers and professionals of courses close to population centers of various sizes believe play will increase when shortages intensify and

CHICAGO—No one connected with the operational side of the golf business has his head buried in a trap, as far as the uncertainties that lie ahead in 1974 are concerned. It is generally accepted that there are some shortages, delivery delays, continued inflation and the perennial difficulty of obtaining all the maintenance and clubhouse labor that is needed.

The crux of how 1974 fares for the nation’s golf clubs swings around the gasoline situation. Will there be enough fuel, everyone is asking, to assure at least routine maintenance of courses, operation of gas-powered golf cars, and what may be most important of all, transportation of players and members to and from the clubs?

The answer to each of these questions is a firm if not resounding “Yes.” The gasoline situation is tight, but not as critical as it is reported to be in the opinion of at least three out of four club managers, superintendents and club professionals. It is suspected that the Government and oil interests have painted an unnecessarily gloomy picture of the fuel supply plight, causing the public and the Congress to

NEW YORK—No clear pattern emerges when assessing the impact of the gasoline shortage here on East Coast golf courses.

One course on the coast of North Carolina has curtailed mowing. In the same state, a club set in the Appalachian foothills has been unaffected.

Exclusive courses on New York’s fabled North Shore (Long Island) report sporadic shortages. Yet Florida’s resort trade seemingly is in no danger.

The gasoline situation here is too fluid to be predictable. Oil company officials, coping with the over-all problem amidst attacks from all quarters, including the Federal government, are short on patience and less than responsive with suggestions on how supervisory personnel can cope with maintenance problems at golf courses. They are still trying to assess the large picture, hoping to forestall drastic governmental action against their interests.

A marketing specialist, when pressed to predict what might lie ahead for the golf industry for 1974, cryptically responded, “Take up tennis.” He did, however, acknowledge that,
travel is curtailed.

But most golf resort managers and professionals are optimistic about their chances for survival, even for progress, during the pinch.

One of the more remote is Singing Hills Lodge and CC at El Cajon, Calif. Although it is less than 20 miles east of San Diego, most of the play is represented by tournament groups from the Los Angeles area, almost 150 miles away. As partner and general manager Steve Horrell sees it: “One tank of gas, down and back.”

With two championship 18s and an 18-hole executive course to fill, it takes a lot of traffic. “If we get a ban on Sunday driving, we’re in trouble,” Horrell says. But he adds: “Even with rationing, I don’t think we’ll be affected too badly.”

Horrell’s boldness extends to the green fees, which are being increased this year to $5 on weekdays and $7 on weekends, a one dollar increase. He switched to propane for heating and cooking and now finds this fuel hard to get. He expects to eliminate one mowing per week, if necessary, to conserve fuel in the course maintenance program.

But Horrell is not extremely worried. Singing Hills courses are booked for 46 of the 52 weekends in 1974—subject to cancellation, of course, if gasoline becomes unavailable to players. The lodge has 60 units, with 20 more scheduled for completion by the end of the year. A tennis complex is being built.

Cliff Waggoner, superintendent at Del Rio CC in Modesto, Calif., believes some benefits may result from the energy shortage. “It can make superintendents manage their allotted energy better and evaluate their practices more carefully, and perhaps work closer with their professionals and club managers.”

Decisions forced by energy shortages, Waggoner feels, will involve the entire club management. “If it comes to a choice between using available fuel for running golf cars or mowing grass, heating the dining room or powering a tractor, everybody on the management team will get into the act.” He feels this might bring some superintendents deeper into the decision-making process.

He expects a general belt-tightening in maintenance programs—less mowing and now finds this fuel hard to get. This year to $5 on weekdays and $7 on weekends, a one dollar increase. He has been cut down, less electricity is being used and at many clubs, rooms and lounges that were previously used during the winter months, have been sealed off.

If it turns out that the fuel crisis is not a barefaced hoax, and the threatened rationing becomes imminent, clubs will take steps to cope with whatever restrictions are placed on them. Superintendents, some of whom had brushes with gas rationing last year, are prepared to hold back on maintenance, reduce mowing operations and fertilizer applications. There is even talk at some clubs of getting car pools organized.

All in all, the energy emergency is being treated here with skepticism. Nobody can quite understand why a small cutback in imported oil can cause such widespread economic disorder. Bungled, contradictory reports by the Federal Energy Commission as to the status of domestic fuel supplies have fired the skepticism. So has the reluctance of the oil industry to make a frank accounting. And, of course, club managers, like everyone else, believe the fuel crisis has been blown up to create a diversion from Watergate. Then, too, most people in charge of the club operation feel that there is enough fuel secretly stored away that can be tapped if the economy starts grinding to a halt.

As a result of the general disbelief, there are no distress flags flapping above the clubhouses, at least in the Chicago district. Superintendents, for instance, expect to run short periodically on gasoline, but not to the extent that it will seriously cramp routine maintenance. Other than this, chemical fertilizers are going to be hard to get. Most professionals feel that they probably won’t be able to get all the merchandise they can sell, but they doubt shortages will be so severe that their sales for the year will show any significant decrease. Club managers are more concerned about continued inflation than anything else, although sporadic shortages will crop up. These factors, plus possible difficulty in hiring maintenance and clubhouse labor, are the principal worries of club administrators.

ing, more attention to equipment to ensure efficient operation and careful scheduling. "Some clubs have grounds that are extremely expensive to maintain, and management may be forced to decide whether to maintain the grounds or the golf course."

Waggoner believes less mowing might even be good for the soil. "We've been competing with each other to see how close we can mow and how often we do it," which are not really necessary for good course grooming or good golf. One essential he identifies in case of rationing: the differences in grasses must be taken into account. Del Rio's bermudagrass fairways are tough and take more horsepower and fuel to mow than the softer coastal grasses.

Silverado CC at Napa, Calif., is only an hour's drive from San Francisco, and professional Craig Williamson's optimism is profuse, aided by 278 one and two-bedroom studio apartments and about 100 individual homes surrounding the course. "I think we'll get a number of people who would drive farther if gas were available, and even some who might come our way instead of going to Hawaii," he says.

With 36 holes, maintenance at Silverado is a major consideration. Efficiency and time-saving have been the key factors in recent equipment purchases. Blessed with good drainage, Silverado can get by with less mowing this winter.

"We really don't expect to lose much play," Williamson says. Arrangements have been made with transit companies in Napa and in the San Francisco Bay area to bring guests from the San Francisco and Oakland airports to Silverado. Another arrangement permits rental cars to be dropped off or picked up at the course. "We're already seeing a doubling up by our guests who arrive by car," he says.

"Awareness of the shortage may help all of us in golf," Williamson said. "It's just another challenge we can overcome." Resort courses well away from airports or otherwise off the beaten path may be in for some setbacks, especially those that are inefficiently operated.

Golf course construction has felt the effects of the fuel shortage, also indirectly. Golf course architect Robert Muir Graves considers the shortened supplies of plastic pipe "very serious" already. Also difficult to obtain is grass seed (and expensive), mostly because of a light crop last year. Delays have occurred in the installation of automatic irrigation systems because copper wire is in short supply. Fertilizer prices have taken a sharp jump, and manufacturers say supplies may be reduced by fuel shortages, particularly natural gas.

"The most embarrassing area for us in 1973 was prices," Graves said, "we just couldn't keep up." His survey of contractors showed that the minimum average increase was 15 per cent, with some items up 100 per cent and more. He has alerted clients with construction scheduled to order materials from a rough list, just to get them on order and minimize delays.

Graves sees little difficulties during the fuel shortage for local clubs and courses, "but resort courses must be extremely careful how they handle themselves," he said. "The construction phase will be difficult for everybody."

Somewhat typical of the attitude of local clubs is Al Meillon, manager of the California GC in south San Francisco. He agrees that play is likely to increase at local clubs and courses if more extensive travel is restricted. He admits that no serious repercussions have occurred from the shortage yet.

"We're watching our fuel consumption closely," he says, "pushing caddies rather than cars, with a resulting loss in revenue, and turning off lights in the clubhouse wherever they are not needed." No abrupt changes are planned in the maintenance program, but Meillon doesn't rule out adjustments later. "For now we'll just have to wait and see."

Gene "Bunny" Mason is golf and public relations director for Black Butte Ranch, described as a "total recreational, second-home development" 150 miles from Portland and 100 miles from both Salem and Eugene, Ore. At the center of the complex is a challenging 18-hole golf course.

"We don't really expect a drop in play connected with fuel shortages," he says. "Most of our play comes from 'our own family' (property owners), and we think they may make fewer trips here, but we expect them to stay longer each time." It could even increase the number of golf rounds.

Black Butte Ranch accepts no cessions or outside groups, although the golf course is a public play operation. Primary use is by the owners of the 225 individual homes and 75 condominium units surrounding the course. Mason believes they will be occupied more fully during the fuel shortage by families whose breadwinners will visit on weekends, partly as an alternative to more extensive travel vacations.

The prospects of fuel and energy shortages are new to the golf business, and nobody seems able to predict how severe they will be, nor where and when they will hit, if at all. They won't catch golf businessmen in the West by surprise.

CENTRAL continued

Superintendents were advised to secure their gas supplies through primary and secondary sources about a year ago when they were threatened with a shortage that, for the most part, didn't materialize. Allocations for 1974 are the same as in 1973, and only severe rationing will interfere with them. At 18-hole clubs, about 300 to 350 gallons per week are consumed in the maintenance operation and at most places, a three-week supply is on hand. Occasional delays in delivery are being anticipated, but most superintendents expect to get around that by keeping close watch on the storage tank and ordering far enough ahead to obviate any critical shortages. If worse comes to worst, mowing schedules can be curtailed to accommodate gasoline supplies. It was tried last year at a few clubs, and there was little if any criticism by players.

Chemical fertilizers will be in short supply due mainly to shortages of nitrogen, and if there isn't enough to go around, there will simply be less fertilizing. Herbicides and fungicides are not threatened at this time, but shortages are expected later in the year. One large equipment manufacturer has alerted superintendents to expect a shortage of certain mower and tractor parts this spring. Tractors reportedly have to be on order four to six months prior to requested delivery.

The superintendent, of course, is apprehensive about his gasoline source, primarily because he fears some form of rationing before the year is out, but what worries him most is the perennial labor supply problem. Golf
