**Bayer Acquires Compass**

Bayer Professional Products recently acquired Compass fungicide from Novartis, which recently merged with Zeneca Professional Products to form Syngenta.

Kansas City, Mo.-based Bayer holds all patents, marketing authorizations, trademarks, and production and formulation expertise for the strobilurin-based fungicide line.

**Toro, Disney extend, expand agreement**

Bloomington, Minn.-based Toro Co. and Lake Buena Vista-based Walt Disney World have extended and expanded their agreement to make Toro the “official turf and irrigation company” of Walt Disney's Resort.

The new agreement applies to most Walt Disney World properties, including five championship golf courses. Disney will use Toro mowers, utility vehicles, irrigation systems and trimming products.

The Toro-Disney pact began in 1996 when it was announced that Toro would provide turf and irrigation expertise for Disney's then new Wide World of Sports complex.

Details of the extension were not announced.

**Deere receives ISO 9000 Certification**

The John Deere Turf Care facility in Raleigh, N.C., recently received ISO 9000 certification. ISO 9000 is a voluntary system in framing procedures for manufacturing quality and is administered by the International Organization of Standardization in Geneva, Switzerland. The standards for manufacturing facilities cover multiple elements, from paperwork and tracking systems to parts inventory and the assembly process.

**To Tell the Truth**

SCOTTS FIGHTING MYTHS ABOUT GENETICALLY MODIFIED TURF

The product is still at least three years from the market, but the Scotts Co. is already waging a quiet communications war to combat myths about its plans to introduce Roundup Ready bentgrass to golf.

Even at this early stage, the Marysville, Ohio-based company is actively gauging superintendents’ interest in the concept, addressing concerns about the politics of genetically modified turf and attempting to counter what it feels is disinformation being spread by competitors.

In an effort to set the record straight, Golfdom's Pat Jones sat down with the man leading the charge for Roundup Ready turf, Bob Harriman, Scotts vice president of biotechnology.

Golfdom: Let’s get right to the bottom line. Suppose I’m a superintendent. What’s in it for me?

Harriman: First and foremost, selective control of Poa annua and Poa trivialis. Superintendents will finally be able to have bentgrass without any of the headaches of Poa. What does that mean? Better playability, improved aesthetics and reduced inputs.

Golfdom: You’re doing lots of focus groups with superintendents. What feedback are you hearing?

Harriman: Primarily that Roundup Ready turf will be easier to maintain. You only have to take care of one species instead of two. It ends the age-old dilemma of, “I want bent, but I hate dealing with Poa.” They also like the environmental benefits — like reduced pesticide and water usage — and they realize that glyphosate is ecologically friendly.

Golfdom: OK, but nothing’s perfect and superintendents are always skeptical. What are they worried about?

Harriman: They’re initially concerned about the broad use of Roundup and how they’ll apply it. For example, they’ll need to use different application equipment like injection rollers. They ask whether it will cross with crabgrass, but the two plants simply aren’t biologically compatible — it’s like trying to cross a cucumber and a tomato. Some have asked about yellowing or other damage to the bentgrass, but our testing shows that our variety is tolerant of extraordinary high rates of glyphosate.
"It's going to turn golf courses into pitch-and-putt courses. ... Twenty years ago, a 420-yard par-4 was considered a tough test. But no longer."

John Viera, director of golf at Mission Inn Resort in Howey-in-the-Hills, Fla., on Callaway's new ERC II forged titanium driver. (The Orlando Sentinel)

"He is still on the team, but Arnold Palmer is not our star player right now."

A USGA spokesman on the continuing saga of the King’s controversial involvement in the dispute between Callaway and the USGA over the ERC II’s "springlike effect."

"The sun never sets on grasses developed at Penn State University — nor does it ever set on the school’s graduates."

Stan Zontek, USGA agronomist for the mid-Atlantic region

"Any posting of a Stimpmeter reading [on a golf course] is a terrible [idea]. Don’t go there."

Bob Brame, director of the USGA Green Section's North-Central region

"Here you see an environmental area — you know, those areas around greens with big weeds that you can’t whack down."

Peter Dernoeden, professor of turfgrass management at the University of Maryland, showing a slide of an environmental area at a recent turf show.
Off The Fringe

Continued from page 17

incident we're introducing this first in golf. It's an excellent way to enter the market and demonstrate its safety and effectiveness. But before we do that, we have to prove that we can keep this product from doing unintended things.

Golfdom: How?
Harriman: First, by complying with extremely strict regulations that apply to all products enhanced by biotechnology. For example, moving even just one seed is regulated and has to be approved by USDA. We have regular federal and state inspections of our greenhouses, collaborators and field plots. Second, we're doing the most extensive testing that's ever been done on a turf-seed variety. We have more than 50 test sites at 20 of the nation's best universities. We've confirmed that the technology works, and we've seen no loss of color or performance. There's no phytotoxicity even at four times the recommended rate at fairway cut. It helps that bentgrass is already inherently resistant to glyphosate, but it does smoke the Poa.

Golfdom: Assuming you get approval and enter the market in 2003, how popular do you think this variety can be?
Harriman: It's still hard to say how quickly this technology will gain acceptance. Obviously, new construction and remodeling will be a big focus. Our research indicates that 90 percent of superintendents say they are "probably" or "definitely" interested in Roundup Ready varieties. More than half say they'd consider replacing their ryegrass with herbicide-resistant bent.

Golfdom: Speaking of which, what's pricing going to be like?
Harriman: It'll be higher than standard bents, but superintendents say they're willing to pay more. There could be some multi-year payment plans as well.

Golfdom: What's your final message to superintendents, owners and others who might be interested?
Harriman: You can break it down any way you want — dollars, environmental or aesthetics — but the most important thing is that it will simplify your life. In a couple of years, you'll be able to judge for yourself.

Editor's note: Roundup and Roundup Ready are registered trademarks of Monsanto.

What’s Your Sign?

A confused “Signboy” latches on to Golfdom's Pat Jones. Matt Griesser, the star of several FooDoy commercials, mistook Jones for a Tour player after witnessing his power and grace (not!) on the range at the National Golf Course Owners Association's annual tournament earlier this year. Note that Jones' name is not on the leader board.

Can’t Sugar-Coat This

Something got lost in translation in our January Real-Life Solutions piece about Novex fertilizer. We wrote that it was a sulfur-coated granular fertilizer, which it is not. A Lesco spokesperson offers the following explanation about how Novex works:

“The key to Novex is the AminoUreaFormaldahyde (AUF). Micronutrients and other soluble nutrient components are matrixed into the homogenous Novex granule. As the AUF is gradually released through microbial degradation, the soluble components become exposed to soil moisture and release. Therefore, Novex has multiple release mechanisms which are ultimately governed by the AUF. Novex is not a coated granule, so its release is not affected by attrition or mechanical damage.”

Golfdom apologizes for the error.

Consolidation Caveats

Manufacturers and suppliers in the golf maintenance industry entered a merger-and-acquisition mode last year that had rarely been seen before. Among others, Novaritis joined forces with Zeneca to form Syngenta, and Simplot expanded its portfolio with buyouts and strategic mergers with other turf suppliers. Will the breathless pace of mergers continue this year?

According to industry experts, companies will take a short breather this year to digest what they've purchased. The lone exception could be e-commerce companies — but not until those omnipresent Web sites start showing a profit.

Companies in 2001 will emphasize knowledge of their partners over growth, experts say. That advice extends to customers as well. Make sure you know who you're dealing with before you commit any money to a company, experts say. Otherwise, you could be left holding the bag.

ENTERTAINMENT AFTER DARK DRAWS GOLFERSTO THE DRIVING RANGE

By Frank H. Andorka Jr.

Looking for a way to spice up nights at your course? Perhaps adding a GlowRange system to your driving range might do the trick.

GlowRange is a system that allows golfers to hit real glow-in-the-dark golf balls at illuminated targets on the range. The targets are 30 feet in diameter with a 3.5-foot bullseye in the center. Kyle Hogan, sales manager for the company, says the range can be used to attract a variety of business, from corporations looking to add a new twist for an outing to teenagers looking for something fun to do on a Friday night.

GlowRange scores each shot digitally, allotting points each time a golfer hits the target. Special ball dispensers mark the balls with black light rays that allow them to glow for 45 seconds. The targets all have point values. When you hit a bullseye, an alarm goes off and the target lights up — sort of like rock 'n' roll bowling with the 14-pound balls.

But don't think GlowRange doesn't take the game seriously. Hogan says golfers of all skill levels will enjoy the innovation, and it helps even good players hone their skills.

"It takes less time to play and has fewer barriers for people who've never played the game before," Hogan says. "With luck, once they've played the GlowRange system, they'll be back to play the entire course at a later date."

GlowRange hopes to digitalize the entire process soon so that golfers around the country can compete for high scores. The company presently has 15 member ranges in Arizona.

"It brings fun back to the game," Hogan says. The real draw, of course, is that in the dark, no one can see how bad you really are.

For more information, contact www.glowrange.com.

Scanning the Web

Frank Andorka revisits (gulp) golfclubatlas.com

What a difference a year makes. When I first visited golfclubatlas.com last year, I wrote, "It kills me not to rank this site higher [I had given it two stars], but its occasional pomposity punctures its brush with greatness." It was a pompous statement itself, to be sure. But it accurately reflected my feelings about what the site had to offer to superintendents.

Recently, however, friends urged me to revisit the site, telling me that it had matured. So in honor of this month's focus on golf course design, I've decided to examine the site again, this time in depth.

***** - Bookmark it and return frequently; * - Look at only if absolutely necessary

****golfclubatlas.com - This time around, I found the tone of the discussion groups passionate and fair-minded. In scanning the discussion groups, there were many insightful comments that can educate even a visitor who knows little about the intricacies of golf course architecture. In the last year, the number of courses reviewed by the site's administrators (Ran and John Morrisett) grew, which adds further texture to the site that had been missing last year. Additional course reviews are planned for the future.

The Morrissetts have also gently discouraged the number of anonymous postings, which detracted from the credibility of the site last year. The site is better because of this. I watched from my screen as the anonymous lurkers identified themselves. The site is more authoritative because most posts bear names to which opinions are attributed.

Also adding depth to the site are the new participants, including superintendents and architects. The site will provide useful information to any superintendent who wishes to know more about the thoughts behind architecture.

I also enjoyed the interview section, which has discussions with important architecture figures (including December's Q&A with Pete Dye).

The site still has a prejudice against anything built in the last 30 years, but because beauty is in the eye of the beholder, it's hard to criticize it on that basis alone. It's been fun watching the site mature into a dynamic place for discussion, and I look forward to seeing it continue to grow.

Scanning the Web is compiled by Frank H. Andorka Jr., Golfdom's associate editor, who hopes that he, too, has matured after hitting the big 3-0 last year. You can reach him at fandorka@advanstar.com with future column suggestions or sites you think he should visit.
