Seven industry associations are planning to launch the Turfgrass Research Initiative to help increase funding for turfgrass research from the United States Department of Agriculture-Agricultural Research Service (USDA-ARS).

Tom Kimmell, executive director of The Irrigation Association (IA), said the associations plan to ask them to fund $32.4 million for next year.

"Right now, the government only provides .0005 percent of their total research monies on turfgrass," Kimmell said. "We could take up a collection in this room and reach the amount they currently give us. Given our contribution to the overall economy, that's ridiculous."

Kimmell says there are 50 million acres of turfgrass in the country that is valued at $40 billion, which is more than the value of other agricultural commodities corn, hay and wheat combined. Those three other commodities receive far more USDA-ARS funding, he adds.

The USDA-ARS will use a combination of turfgrass universities and its own network of research stations.

The associations working on the initiative include the IA, the GCSAA, the National Turfgrass Federation, the Professional Lawn Care Association of America, the Sports Turf Managers Association, Turfgrass Producers International and the USGA.

Lebanon purchases technology
Lebanon Turf said it has acquired a patented slow-release fertilizer technology. The new products — marketed under the brand names MESA and EXPO — are designed to extend the benefits of ammonium and...
She's Gone

BUT RUMOR HAD IT THAT WHITMAN WAS ON HER WAY OUT OF EPA

It's no surprise that Christine Todd Whitman is out as administrator of the Environmental Protection Agency. Whitman turned in her resignation to President Bush in May. Rumors were swirling last winter that Whitman would be the first Bush cabinet member to resign. A moderate Republican appointee who was supposed to enforce environmental laws, Whitman found herself at odds with the Bush Administration's tendency to lean toward regulations that benefit industry, according to reports.

Whitman said in her resignation letter than she was leaving to "spend time with her family."

"As rewarding as the past two-and-a-half years have been for me professionally, it is time to return to my home and husband in New Jersey, which I love just as you do your home state of Texas," Whitman wrote Bush.

The former New Jersey governor's last day was June 27.

Whitman was a keynote speaker last year at the fourth National Golf & Environment Summit in Nebraska City, Neb. She told Golfdom then that the golf industry was becoming more important on EPA's priority list, but ranked "way below" the agricultural industry.

"Golf is rapidly getting close to baseball as the national pastime," Whitman said. "With more courses being built, we need to understand that we all have a role in helping the environment."

Avoid extra water hazards

• Quick & easy solution for preventing standing water in low-lying areas

• Collects and releases runoff water underground without the need for long piping runs

With the Flo-Well™ Storm Water Leaching System, your golf course will stay puddle-free and playable even after the worst rain storms. Rest easy under any weather conditions with NDS, your one source for drainage systems. For more information, visit: www.NDSPRO.com or call 1-800-726-1994

potassium sulfates in a slowly available form without the need for coatings.

Deere teams with EAGL

John Deere was named the exclusive supplier of golf course maintenance equipment and financing to Evergreen Alliance Golf Limited (EAGL), a golf course management company serving more than 40 courses around the country.

Through the agreement, John Deere Golf & Turf One Source will be supplying golf and turf maintenance equipment to the superintendents of each EAGL course, including all mowing, aeration and specialty turf products. John Deere will also provide exclusive financing to the courses.

New Standards for Controllers and Sensors, But...

The Center for Irrigation Technology (CIT) is in the process of developing nationwide standards for irrigation controllers and soil sensors that will be finalized by the end of the year. But Dave Zoldoske, director of CIT, said the draft standards won't matter unless irrigation consultants can convince construction firms to use the standards.

"It's great to have standards, but if no one implements them, what good are they?" Zoldoske said. "We need to work together to make these work."

Bayer announces reorganization

Bayer Environmental Science recently announced a reorganization within the Chipco Professional Products marketing group. The changes include several new positions, as well as adjustments within the structure of previous positions. The new slate of managers now includes:

Jim Fetter as director of marketing.
Marc McNulty as business manager of insecticides.
George Raymond as business manager, herbicides/PGRs.
Eric Kalasz as business manager of fungicides.
Mike Ruizzo as business manager of CNIs.
Bryan Gooch as program manager.

Trees vs. Turf
FERTILIZATION HELPS BALANCE PLANT RIVALRY

By Jami Pfirrman

Great battles are waged on every golf course, and the competition is fierce. The contenders bring with them an intense hunger to win. But instead of clubs, they are armed with competitive root systems.

On every golf course, the towering trees are in constant competition with the plentiful turf. The winner draws in a purse containing the most nutrients a course has to offer. But with the right care, the trees vs. turf rivalry can result in a win-win situation for both of the competitors as well as superintendents and golfers.

In forests, trees grow in typically ideal conditions. Forest soils are rich in nutrients from leaf decomposition and other decaying plant matter.

In most landscaped environments, many plants lack the nutrients necessary to thrive. The space surrounding trees is usually occupied by turfgrass, which competes with trees for nutrients. Grass roots are more efficient at extracting nutrients from the topsoil than tree roots. Grass roots more fibrous and closer to the soil surface, and are better able to absorb the nutrients and fertilizers before they have a chance to reach the deeper tree roots.

The key to healthy trees and turf, in part, is a proper fertilization program. For trees, the goal is to get the fertilizer down deep enough into the soil so that the roots can easily absorb nutrients. To increase nutrient absorption, the fertilizer must be applied below the grass roots. A subsurface tree fertilizer is applied in the top four to 12 inches of soil, which is where trees' most active roots grow.

Applying a slow-release nitrogen fertilizer in the fall enables trees to assimilate the nutrients necessary for ample chlorophyll and subsequent carbohydrate production that eventually increases overall tree health. Although trees can be fertilized with a slow-release form of nitrogen fertilizer at any time of the year, fall applications produce immediate effects the following spring.

Well-nourished trees are more tolerant of insects, disease and unfavorable environmental conditions like drought.

Pfirrman is a communications specialist at the Davey Tree Expert Co.
"My backyard doesn't look too good. But that's the old adage with superintendents. One time a representative from a lawn company came to our door. My wife answered and the man said he wanted to know if he could take care of our lawn. My wife told him, 'No, my husband is in the business.' The man looked around the yard and said, 'He is?'"

— Gregg Gaynan, superintendent of O'Bannon Creek GC in Loveland, Ohio, on why it's so difficult to take care of his yard in the summer, especially when he's working so many hours at the course.

"When I'm stressed out, I take my truck and park it on a dam between two ponds. Then I pull out a fishing pole from the back of my truck and throw a plug in the water."

— Rusty Tisdale, superintendent of Cobb's Glen CC in Anderson, S.C., on relaxation.

"I graduated with a philosophy degree. Naturally, the best thing to do with that was go into the golf course business."

— Dave Spotts, superintendent of Eagle Crossing GC in Carlisle, Pa.
