The Company Line

PRODUCTS & SERVICES

Over 75 Years of Turf Stewardship

- Proven Results
- Cost Effective
- Environmentally Friendly

Sub-surface aeration system
Advanced Aeration Systems offers the RZ-Aer sub-surface aeration system, which uses sensor-based automated controls to provide a steady stream of real-time data and historical analysis about the conditions of a green’s soil profile. The system uses the company’s patented TerraSource Technology to wirelessly network to communicate vital root zone data. The software monitors and regulates oxygen, moisture and temperature.

Turf stress detection glasses
Bomar Technologies offers Nastek Golf Turf Stress Detection Glasses to help superintendents detect turf stress from disease, insects and water. The special lens-filter technology, developed by NASA scientists, blocks out the green color reflected from chlorophyll in healthy turf, causing it to look black or gray. Since the human eye is sensitive to light in the green color range, any off-green colors caused by disease, pests or water will stand out as glowing red, coral, pink or other hues against the black background and allow problem turf to be quickly identified.

Fungicide
Kestrel fungicide is the latest addition to the expanding product line from Phoenix Environmental Care LLC. Kestrel is used to control dollar spot and a broad variety of other diseases in turf and ornamentals.

Seashore paspalum
The University of Georgia offers Sealsle Supreme, a new and improved semi-dwarf seashore paspalum cultivar developed by Ron Duncan. Like predecessors Sealsle 1 and Sealsle 2000, Supreme requires less nitrogen and less water than many other warm-season cultivars. Supreme has a higher inherent salinity tolerance level than the other paspalums available, according to the University of Georgia. It can tolerate most types of alternate water sources, including wastewater, effluent, gray water, brackish water and even ocean water-fresh water blends for short times.

Biostimulant
Becker Underwood introduces Sprint 330 + Manganese (Mn). Designed to improve the quality and growth of intensively managed turfgrass, Sprint 330 + Mn is a professional formulation of a high-performance chelated iron and a water-soluble manganese that corrects these mineral deficiencies in slightly acidic to slightly alkaline soil.

Organic Nematode Control Kit

RUTOPIA Liquid Biostimulant
With Trichoderma and specific bacteria that prohibit the growth of nematodes

DRAGONFIRE-CPP - Organic Nematicide
- No REI - 100%
- Natural - Effective - Sprayable
- EPA Exempted

Each kit covers 1/2 acre
Includes: .5 gallons 7509 Emulsifier for Dragonfire-CPP
