CANOPY TEE BENCH AT LOW PRICE

Muncie, Ind.—W. M. Sample Co., makers of golf course accessories, are featuring a low priced golf tee bench with canopy top.

The bench is 6 ft. long, with enameled, electric welded angle steel construction, and striped canvas drop. The top is enameled steel. Bottoms of legs are constructed to prevent marring of turf.

The benches are furnished with, or without, tops and golf bag racks. Full details will be supplied on request by the Sample company.

Uneven Fertilization Causes Trouble
(Continued from page 68)

the presence of an excessive amount of nitrophoska could easily cause a change in soil reaction from pH 5.00 to pH 4.5.

A test for available phosphoric acids showed that there was five times as much available P$_2$O$_5$ in the affected areas as in the healthy areas. Again, the presence of an excess amount of nitrophoska could easily account for the increased amount of available P$_2$O$_5$. Nitrophoska I. analysis is 15-30-15.

A third proving fact is that excessive amounts of potash has a restricting effect to grass root growth. The illustration shows the comparative root and top growth of the grass taken from healthy and unhealthy areas.

Rid Your Greens of Earthworms without harming the turf. Apply

THE PEERLESS MOWER SHARPENER

Protect your turf against damage with a Peerless Mower Sharpener that grinds and reconditions by “lapping in” all makes of power, horse, or hand tools as only a Peerless can — scientifically — quickly—perfectly. Operated by 1/2 H. P. motor. Pays for itself in no time. Write for catalog and list of users.
The Fate-Root-Heath Co., 888 Bell St., Plymouth, Ohio

Uneven Fertilization

(Continued from page 81)

Probably the more raking in there is of pre-seeding fertilizers, especially cross-raking, the less likely there is to be unevenness in the new seeding. Also undoubtedly outside pressure to "get the seed in," as was the case in the example here cited, has caused many greenkeepers to under rake the seed bed, even against their better judgment.

Readers of this article should understand that this article is not meant in any way as being adverse to the use of nitrophoska. This fertilizer happened to be used in the example cited and furnishes a quick and reasonably positive proof of the possibility of uneven distribution of pre-seeding fertilizer. Any fertilizer used could be unevenly raked and an uneven appearing seeding be the result.

Why Topdress Greens?

TOPDRESSING greens is necessary (1) to furnish additional plant food for the growing grass, (2) to add a new lively surface of fresh unpacked soil, (3) to fill up the small depressions in the green and thus make the surface uniform and true, (4) to support the mat of fluffy stolons and grass blades which continuously accumulate above the surface of the soil.

BUY YOUR GREENS READY-MADE

Laid Down Like a Carpet

Hundreds of golf and country clubs, greenkeepers, landscape architects, homes, etc., utilize Illinois Grass Co.’s True Washington Strain Creeping Bent in solid turf form. Furnished in rolls, ready to lay down like a carpet. Also available in stolon form.
