August’s heat and humidity always increase the danger of brown patch damage. But in most cases, this damage can be entirely prevented by treating greens regularly every week with Du Bay Semesan or Nu-Green. Semesan, recommended where soil is normally fertile, has a remarkable 10-year record for controlling and preventing brown patch. Nu-Green (the only brown patch disinfectant licensed under U.S. Pat. No. 1,787,581) has been used successfully for 6 years. Because it also stimulates grass growth, it is advised where soil fertility is lower. Order from your seedsman or golf supply house.

FREE: New pamphlet—“Brown Patch Diseases: Their Prevention and Control.” Describes principal grass diseases; tells when they occur and how to prevent them with Du Bay Fungicides. From your seedsman or supply house, or write Bayer-Semesan Co., Inc., Dept 91-A, Du Pont Bldg., Wilmington, Del.

Control Grubs, Beetles Earth-Worms with Dow Lead Arsenate

Many greenskeepers solve the grub, beetle and earthworm problem with Dow Lead Arsenate.

“We have used Dow Lead Arsenate for control of grubs and worms and have been more than satisfied with the results”, writes one.

Another says, “Relative to the use of Arsenate of Lead on the golf course, I have had exceptionally good success in controlling the so-called Web-Worm.”

Another, “We have been using it for two years and have just about eliminated the worm casts from our greens.”

Dow Lead Arsenate has repeatedly proved its remarkable effectiveness. It is a light, finely-divided, fluffy grade that is especially adapted for grub, beetle and earthworm control. It also discourages the growth of chickweed, crab grass, fennel and other weeds.

Keep your greens and fairways in good condition all season. Use Dow Lead Arsenate.

Write for information.

The Dow Chemical Company

THE TESTED PYRETHRUM SPRAY FOR CONTROLLING SOD WEBWORMS

Extensive tests show that Red Arrow Insect Spray offers a thoroughly dependable way to rid putting greens of sod webworms.

Mr. W. H. Noble, U. S. Dept. of Agriculture, investigating for U. S. Golf Asso. Green Section, reports in January Bulletin, "when used 1 ounce to five gallons water gave practically 100% kill."

Methods of application are remarkably easy. Simply use ordinary sprinkling can and apply 1 gallon of solution to 1 square yard of turf. Within a few minutes insects are forced to the surface and quickly die. Complete control is assured, yet without the slightest danger of poisoning or injury to grass.

- Pyrethrum in Its Most Economical Form

Because it is highly concentrated and scientifically combined with soap, Red Arrow is the most economical and effective of all Pyrethrum insecticides. At leading seed and hardware stores or write direct for complete information. Address Red Arrow Dept. G-3, McCormick & Co. Inc., Baltimore, Md.
The 12th green at Fresh Meadow Country Club, Flushing, L. I., where the U. S. G. A. Open Golf Championship was held this year. Grass seed for this course supplied by Stumpf & Walter Co.

The Greenkeeper Knows!

Every Greenkeeper knows the importance of the maintenance of turf in a fine healthy condition and that the Fall of the year is the best time to sow grass seed, especially in connection with new work.

While budgets have been cut and economy practised in every department, here is one place where false economy should be avoided, especially as the cost for grass seed is so comparatively small. To neglect this necessary work will mean a far greater expenditure in the future. It is real economy to do it now. Wherever there is a weak spot sow Grass Seed of Known Quality to thicken up the turf and crowd out the weeds.

**TWO OUTSTANDING BENTS**

- **Triple A Bent**—A stoloniferous type of *Agrostis capillaris* which produces turf of the deep apple-green color and fine silk-like texture of Velvet Bent. The seed has been processed so thoroughly for the removal of weeds that it consists of over 99% pure seed.

- **Seaside Bent (Coos Co. Strain)**—A true strain of *Agrostis palustris* (formerly known as *Agrostis maritima*) which has produced some of the finest greens in America. Quick to grow and strongly creeping, it yields a closely matted bluish green turf of very uniform texture, similar in appearance to a fine vegetative turf.

Prices on above, or any other turf producing grasses, also Bent Stolons, on request.

Remember:—All our seeds are of the highest quality, obtained direct from the most reliable sources of supply and are botanically true to name. All seeds are new and are cleaned and re-cleaned until they are brought up to the highest possible state of purity and germination, special care being given to the elimination of weed seeds.

Without obligation we shall be pleased to send a representative who, from long experience, is qualified to advise regarding grasses and furnish such other information as is necessary for the best results.

Feed your turf this fall with a natural grass food...

PREMIER POULTRY MANURE

...and your fairways and greens will be better—earlier—next spring. A safe, sane turf diet that has proven its effectiveness on hundreds of America's best kept courses. Now's the time to plan fall feeding.

PREMIER POULTRY MANURE CO.
327 S. La Salle St.
Chicago, Illinois

Best for turf because—

- It is a natural grass food and stimulant.
- It is a balanced manure containing 6% Ammonia, 2.50% Phosphoric Acid and 1 to 2% Potash.
- It contains no live weed seeds.
- Being organic, it aids humus and aids bacterial action.
- It can be applied with a minimum of labor and expense.
- Being more soluble than other manures, it is more available.
- Being finely pulverized, it is quickly absorbed into the soil.

Write for name of your nearby dealer.
It's not the cost of each application, but the cost of a season's protection that determines the expense of fighting Brown Patch. Brown Patch may strike today or two weeks from today. No fungicide can absolutely prevent attacks but a good fungicide lessens the severity of violent attacks and wards off light attacks. The fungicide you use must be constantly on guard to protect your greens.

That means that the fungicide with the longest-lasting effectiveness is cheapest in the long run. Barbak, the slowly soluble fungicide, according to this survey, fills this bill. On the average, Barbak protects your greens just about twice as long as other fungicides—saves labor as well as materials.

Not only that... Barbak is odorless, easy to apply, doesn't cake in the can. It won't burn your turf, whether watered in or applied with a top soil dressing.

Write us for the name of your nearest Barbak distributor, and check these advantages for yourself.

“On our two courses we have standardized on Toro Tractor Mowers. Our seven-year-old Push-Type outfit is still on the job every day and most of the original reels are still in excellent condition. In spite of the greatly reduced budget, I feel that our purchase of a Master Seven-Unit outfit is real economy. In speed, economy, and excellence of operation, the Master Seven is unsurpassed. “It acts like a putting green mower on the fairways. A True Master of Mowing.”

Yours very truly,
PAUL E. WEISS, Superintendent.

You are making a big mistake if you buy an old-fashioned pull-type outfit without seeing the Toro “Master” perform. Write today for full information

Toro Manufacturing Co., 3042-3168, Snelling Ave., Minneapolis, Minn.
Examine a Roseman Mower closely. See how every part is made of quality materials. You will understand why Rosemans cut grass better. Inspect the roller drive. Note how much added power comes from its full width traction. Watch the roller carry the blades clear above high spots of ground, preventing "scalping" of turf.

When the grass is growing fast in mid-summer and should be cut two or three times a week, you can DEPEND on Roseman's for a swift, clean job.

Roseman Mowers not only cut your fairways better; but make the grass GROW better. Every greenskeeper knows the benefits of light rolling... how it seals heat cracks and retains moisture in the soil; "plants" loose surface runners. The gentle massaging action of Roseman Rollers is improving backward fairways everywhere.

Send the coupon below for further information.

Roseman Construction Features:

- Timken Tapered Roller Bearings on Cutter.
- Hyatt British Tank Roller Bearing on Rear Axle.
- Alemite Forced Feed Lubricators.
- Guaranteed Non-Breakable Malleable Iron Side Frames, Gear Cover, Bed Knife Shoes and Caster Wheel Forks.
- Drop Forged Machine Cut Gears.
- LIGHT ROLLER DRIVE, for better Traction and turf development.

(Our patents give us the exclusive right to all ganging of Roller Type Mowers)

Mid-Season Survey Shows Clubs Weathering Storm Nicely

By HERB GRAFFIS

Mid-Season check-up of the golf clubs brings to light cheering news. Private clubs have suffered membership losses that probably will run as high as 20%, but that figure isn't as serious as it appears offhand, since many of the members who dropped out were rather inactive in previous years. Establishment of "associate" memberships or other classes permitting play on payment of green-fees has made up for some of the gap in the membership.

Public courses are getting a lot of play at low rates because of unemployment, so the toughest spot in the business is the daily-fee courses that are hit on one side by the low price competition of public courses and on the other side by the private clubs dropping the bars on trade tournaments and permitting individual play on payment of green-fees and a small annual payment. However, with the exception of spots like Chicago, Detroit and Cleveland where there has been some over-building of fee courses, the pay-play situation is in better shape than is most business these days.

Women Brighten Outlook

Women's golf continues to be a bright spot in the picture. At the majority of metropolitan district clubs, women's play this year is greater than ever before. Free class lessons given by the pros and reduced luncheon prices have been important factors in increasing this play. Signs of the women's heavy play are plain on the tees. With reduced maintenance budgets the greenkeepers can't keep right after tee repairs as they did a couple of years ago. Women's play in the mornings also prevents tee repair work. Men's merciless hacking at the tees is bad enough but when the women get through their assaults, the tees are sadly stripped.

No More Show-Off

Reports from representative clubs show that by eliminating the exhibitionism and extravagances that were O. K. in the old days when precious metals jingled in every pocket, the golf clubs have been able to put themselves in sounder shape than ever before. Golf clubs today are for golf. Despite tough times, retirement of indebtedness is proceeding satisfactorily and sinking funds, long unpardonably absent in the financial operations of many clubs, are being established.

There will be extremely few assessments this year. Typical of the cases in which assessments are being avoided is that of the Glen Brook C. C., Stroudsburg, Pa. Membership is down about 20% and the folks who are active are watching their expenditures, since the club's income is off one-third, part of which is due to lower food prices and green-fees. Expenses have
been reduced one-third and paring has been done in details that are not strictly golf. Consequently the club will get through the year financially right side up. This one-third cut in expenses seems to be a fairly general figure. At Woodland in the Boston district, play is up to normal due to reduction of club operating expenses by a third and broadening of the guest privileges. Golf at bargain prices is the cry in the Boston district, according to Woodland's president, Natt W. Emerson. The clubs' panicky tendencies at the start of the season probably had as much to do with the reduction as did the clamor of the players.

It all means a cut in the cost of golf, which is a good thing for the game so long as the cuts do not throw the clubs back to the cow-pasture era of maintenance. Temporarily waiting lists have vanished, but with the cost of golf now at depression prices, a new crop of golfers is being raised for use of the existing golfing facilities.

Course Labor Savings Large

Further study of labor handling in course maintenance has resulted in some astounding economies in course operation. GOLFDOM has repeatedly pointed out that the labor item afforded biggest opportunities for saving, but until drastic cuts became imperative, many greenkeepers and chairmen did not realize what was possible in more efficient utilization of labor. John MacGregor, superintendent of Chicago G. C., summarizes the situation by saying:

"When budget slashes got so strong it was a case of the greenkeeper absolutely cutting down or losing his own job, the greenkeeper had not only a strong incentive but full responsibility for savings. Probably some mistakes have been made in trying to effect false economies, but it is a certainty that all of us are handling our labor better than ever before and getting better work from our men. The main danger from now on is not letting the greenkeeper use these recent teachings of our labor better than ever before and getting better work from our men. The main danger from now on is not letting the greenkeeper use these recent teachings of experience in making up his 1933 budget. The cutting is in danger of being overdone as some courses already show."

At the Audubon C. C., Louisville, the club shows an approximate profit of $3,000 for the first six months of 1932 operation. The grounds maintenance expenses are $3,000 under the same period last year. August with its usual history of serious brown-patch attacks and insect pests will be a testing month at most courses for a couple of bad weeks can eat away a goodly part of the budget and leave the course with injury that may take months to remedy. Labor economies are credited with being the major item in the Audubon reduction of expense.

Season Memberships Help

At Chagrin Valley C. C. (Cleveland district) the 1932 budget was made on a basis of income 30 to 40% below 1931. The Chagrin Valley officials report they have reduced departmental expenses by amounts varying from 25 to 50%, with the smallest reduction being in course maintenance. Income this season is larger than estimated. Season playing privileges selling for $50 a year less than the cost of regular membership make up for the drop in regular membership. Regular members, instead of demurring, took to the temporary plan gracefully. The club also allows inactive members to go on an "inactive list" for a year by paying $50. This relieves the member from the necessity of paying dues. Green privileges are extended on payment of green-fees. This has worked out so this class of member has paid into the club treasury about as much as they would when maintaining their $150 annual dues of regular membership.

Collections Being Watched

Collections at Chagrin Valley and most other private clubs are in excellent shape. The club probably will finish 1932 in the black more than $3,000. It looks as though most of those unable to stand the expense of private club membership now have dropped out.

Some of the clubs have gone on a cash basis instead of the usual monthly bill procedure. At one of the blue-chip clubs in the East where the members were hit hard by the market and general business depression, accounts are billed on a weekly basis. Almost complete elimination of posting has been the result.

Some of the smart old clubs that never went in for circus stuff right now are in better shape than most businesses. Columbus (O.) C. C. continues to operate at a profit for the simple reason that its officials long have been in the habit of making income and outgo jibe. Prices were reduced and operating costs cut right along with drop in the membership instead of waiting until a year's red had to be made up.

Mission Hills C. C. at Kansas City, Mo., is another one of the old reliables that
