L. A. Young Golf Co., Detroit, Mich., held its 1935 sales convention August 22-24, at the Wing Lake estate of Pres. L. A. Young. Here in a spacious pavilion fronting on the lake, the 1936 Hagen line was presented to the sales representatives of the company by Vice-Pres. E. E. Chapman. The meeting wound up with a golf tournament at the Red Run GC, followed by a banquet at which Walter Hagen officiated as toastmaster.

UNITED STATES RUBBER CO. has applied the lessons of cord tire construction to golf course hose in a successful effort to offset harsh treatment hose gets in course maintenance. Results of this work feature the golf course hose US presents for 1936 budgets.

J. A. Muller, of the company’s hose division, names as leading features of this manufacturing development: a substantial increase in burst resistance, increased resistance to external abuse, increased flexibility, and greater strength and durability at couplings.

Spiral cord sheathings, running in opposite directions to balance strain, are enveloped in rubber sheathings in a manner that produces a close and enduring bond between the component parts, says Muller. Obviously this construction calls for multiples of two plies. Over all a sturdy covering of rubber is applied.

Especially proud of the US golf hose performance this year is the San Francisco branch of the company which sold the hose into the service of leading clubs in that section. In the San Joaquin and Sacramento valleys where summer temperatures are extremely high, the hose has stood up splendidly despite the injury that hot water usually does to golf hose.

Four prominent Cleveland clubs, Canterbury, Acacia, Oakwood and Shaker Heights, report that with automatic coal stokers, not only are fuel costs lowered, but also heat is more uniform. Members find their clubhouses comfortable during the cold months. The smoke nuisance is eliminated.

Elmer E. Heasley, Jr., pres., Acacia, reports “a 51 per cent reduction in fuel costs without any temperature corrections. The installation has given us extreme satisfaction; we have plenty of hot water and even temperatures at all times”.

E. B. Roberts, pres., Canterbury, states his club’s stoker has reduced fuel costs about 25 per cent. One advantage noted is that it has enabled the firemen to devote more time to other work in the clubhouse.

R. D. Clark, pres., Shaker Heights, reports: “From February 1, 1932, to February 1, 1933, we used hand-fired coal at a cost of $984.64 and gas for hot water for kitchen, laundry, etc., at $1,516.40; total $2,501.04.

“After the installation of an Iron Fireman stoker on February 1, 1933, we used from that date to February 1, 1934, coal at cost of $663.20 and gas at $707.97; total $1,370.99, or a net saving of $1,130.05 for the year. This was accomplished by the installation of an indirect hot water heater and the remaining gas is now used for steam tables in the kitchen. The above figures represent a 45 per cent cut in our fuel cost, and it is needless to say that we are very well pleased with our installation.”

THE KALO CO., QUINCY, ILL., has a development in insecticides which should be of interest to greenkeepers. J. W. Lusk, president, advises:

“We have found a way of greatly increasing the insect toxicity of Kaloi, our concentrated pyrethrum insecticide, and tests made during this past season on golf greens for sod webworm showed that, as far as we could tell, Kaloi was superior to other pyrethrum sprays for this purpose, and was somewhat more economical to use.

“Our best results came with Kaloi at a dilution of 1 to 600, using 100 gals. to each 1,000 sq. ft. of green. Very effective and satisfactory results were secured when a smaller amount was used, in fact much
FOR FINE TURF
Use Hyper-Humus to enrich your soil and grow fine, green, long-lasting and uniformly sturdy turf. Famous greens give credit to this rich, black, cultivated peat humus. Government and soil experts approve it. Ask your local dealer for it and start this Fall to build your soil Nature's way.

HYPER-HUMUS COMPANY
Plant: Newton, N. J.

FINE SAND GREENS vs. POOR GRASS GREENS
Monroe Permanent Putting Path can be installed in any sand or grass green at little cost. Fast as bent, accurate as a billiard table.

Takes the Prayer out of Putting. Permits all normal golf shots. Cuts green upkeep to minimum. Write for details MONROE CO., COLFAZ, IOWA.

NEW LIFE FOR GREENS & FAIRWAYS
"Lime Crest" CALCITE (Pulverized) does wonders in sweetening soil, making grass on greens and fairways grow lush and green. Finely pulverized high-calcium limestone—quick acting, long lasting. Write for full information. Limestone Products Corp. of America, Dept. 159, Newton, N. J.

• BENT GRASS •
BOTH SOD AND STOLONs
Vigorous, healthy stock that develops fine, true putting surfaces. Write for full information.

better than would normally be expected, but this would be our recommendation.

"Kaloil is a special type of pyrethrum insecticide in which is incorporated a patented oxidized sulfonated oil spreader which energizes the pyrethrum, is active in itself, and give much better coverage and penetration than when pyrethrum is used with soap or with saponified oils. For general purposes with plants, Kaloil can be relied upon to kill any insect on contact at the proper dilution, and is non-poisonous."

A feature of many club buffet luncheons that will grow in use next season is the WILSON & CO. new line of vacuum-cooked luncheon meats, known as Wilson's "Lasting Flavour products". They are packed mostly in 6-lb. net oblong tins, which makes sandwich-size slices.

The line consists of 30 items such as brisket beef, hams, fancy suize, pork and ox tongue, boneless pork hocks, chops, pork tidbits, spiced beef and canned chicken. These delectable prepared meats are highly economical because there is absolutely no waste and no additional cooking is required, and they are a "friend in need" to managers when an unexpected rush of hungry golfers occurs. Because there's no advance preparation necessary, there's no loss if the weather turns bad and the crowd doesn't show.

MARTIN DENNIS CO., 859 SUMMER AVE., NEWARK, N. J., makes Lexol leather conditioner which has been getting a good play at eastern golf clubs this summer. The preparation preserves and restores leather. Golf shoes treated with Lexol after being worn through the wet don't dry stiff. Grips, golf bags and gloves treated with the material retain softness and resist the tendency to glaze or to scuff or scale on the surface. Cost is low so the Lexol proposition has gone over well as a new service at pro shops and in locker-rooms.

Greenkeepers have been watching with more than ordinary interest startling experiments with the so-called "rare elements" in fertilizer being made by soil technologists of the Department of Agriculture. As a result of this work rare elements that were formerly ignored have begun to assume vast importance and many fertilizer users and manufacturers are finding it necessary to recast their entire concept of fertilizer values.

The chemical analysis of Milorganite made for the MILWAUKEE SEWERAGE COMMISSION by the University of Wisconsin is probably the most detailed and thorough analysis of fertilizer ever made. This complete analysis was made from a
composite of hundreds of samples taken from 27,000 tons of Milorganite and showed that, in addition to organic nitrogen, phosphoric acid, and potash, Milorganite is abundantly supplied with other common elements used by plants such as calcium, magnesium, sulphur and iron, as well as copper, manganese, lead, chromium, titanium and other rare elements.

Soil analysis indicates that many so-called "poor" soils are deficient in one or more of the rare elements. Thus the use of Milorganite not only provides the commonly accepted fertilizer elements, but also supplies the other less common and rare elements now recognized as being vital to healthy plant growth. This is one reason why Milorganite has been such a successful fertilizer.

The Sewerage Commission will gladly furnish a complete analysis of Milorganite to any interested Club or Greenkeeper.

LYON METAL PRODUCTS, INC., AURORA, ILL., is introducing to clubs its new Steelart Style "D" Bridge Set, consisting of table and four chairs.

The double, tubular-designed rail and tapered legs of the table are of steel, welded throughout. Top is a rigid, beverage-proof upholstery. There are no unsightly struts, braces, sharp edges, or corners, the makers point out.

This new Steelart Set, with wide and comfortable, curved seat chairs, is available in several shades of enamel and in several full-chrome or chrome-enamel combinations.

IDEAL POWER LAWN MOWER CO., LANSING, MICH., following a full season's development work, announces a new fairway mower that will be ready for the market several months prior to the 1936 season. The new mower will be available in three, five, seven and nine gang sizes.

This new Ideal "Bulldog" mower design includes many important features and improvements, the makers announce. Cutting units, which are sturdy and very compact, use the simple, fool-proof pinion drive with gears of cut steel, carefully

The SILVER KING Tractor
Here, in one tractor, are combined low first cost, low maintenance cost, low gasoline and oil consumption, high speed and great power. The Silver King comes equipped with either low pressure tires or wide, roller type wheels. It pulls a 5-gang unit practically anywhere, a 7-gang unit on the straight-away. It is compact, light weight, flexible. Four speed transmission. Speeds from 2 3/4 to 25 miles per hour. Investigate. Illustrated bulletins and prices upon request.

protected against dirt. The adjustment has been simplified, made more accessible and has a positive locking feature. Oversize Timken adjustable bearings, carefully protected against dust and dirt. Larger diameter wheels with special lugs. Improved steel roller, on oversize roller bearings sealed against dirt. Reel blades and bottom knife of special formula steel.

Cutting units are carried in a frame that is constructed in sections so that the machine can be built up as three, five, seven or nine gang, and the different sizes easily or reassembled at any time. Main frame carries the three center units, each additional unit is carried in separate section with carrying wheels. Levers lift the units from the ground for transporting.

JACOBSEN MANUFACTURING CO., Racine, Wis., is enthusiastic over the performance of its new 20" and 24" Sturdex power mower, designed especially for mowing banks on greens, aprons, approaches and tees; in fact, to do all work on a golf course ordinarily done with hand mowers with the exception of mowing greens.

Makers claim the Sturdex is by far the easiest handling mower put out to date by any manufacturer for such hard work as mowing the sides of steep bunkers where it is almost impossible for an operator to walk. This machine is extremely light in weight, well balanced for traction, powered with an engine that barely pulls the operator along, and can be furnished with either pneumatic or metal wheels. In addition to the rough work on bunkers, it will cut tees as close as they should be cut. With the Sturdex one man can do all the hand mowing on the average 18-hole course in one day a week, it is stated.

Our entire business is devoted to growing fine bents both creeping and velvets. Our only income is derived from selling these bents. We are fine turf specialists.

ST. MUNGO MFG. CO., has been dissolved and after 35 years with the St. Mungo business Jack Jolly and his son Bob have started in on their own to build up another Colonel ball business.

The new line of Colonel balls and private brand balls that Jack and his boy will handle will be made by Spalding. Jack started on the Colonel come-back October first and already has had solid results in getting some pro business. Jack's new address is 872 Broadway at Verona ave., Newark.

WANT ADS

Well known greenkeeper, possessing highest recommendations throughout mid-west, desires change. Expert in all details of course maintenance and construction work on depression budget. Address: Ad 1009, % Golfdom, Chicago.

For Sale—One Indoor Golf Net 12 x 12 x 25 ft. $125 value, like new—for $85. Address: Ad 1050, % Golfdom, Chicago.

Professional desires position with a Metropolitan district club. 14 years' experience with six clubs. Excellent clubmaker, good player and noted for teaching ability. Address: Ad 1068, % Golfdom, Chicago.

For Sale—Nine hole golf course overlooking ocean on Oregon Coast Highway with half mile beach frontage. Will sell to reliable party on terms. Address inquiries: Box 646, Brandon, Oregon.

Pro-Greenkeeper desires change. Seven years at present club. Dependable character, excellent references in regard to course upkeep, teaching and shop activities. High credit rating. Class A member P. G. A. Club finances make change desirable. Address: Ad 1005, % Golfdom, Chicago.

Wanted: Experienced power mower salesman by established dealer in New York state. Must be competent to gradually assume charge of course maintenance department of the business. Must have excellent record as producer and supervisor of service. Address: Ad 1007, % Golfdom, Chicago.

Competent Golf Professional, married, age 28, desires professional or managerial position in south or southwest. Has winter following. At present located at one of finest clubs in New England. Address: Ad 1001, % Golfdom, Chicago.

Greenkeeper now having completed construction and maintenance job is open for new position. Eighteen years' experience, construction, maintenance, water systems, mechanics, fertilization, etc. Excellent references. Anywhere. Address: Ad 1008, % Golfdom, Chicago.

Experienced, well-known professional wants winter connection from November 1st to April 15th. Is fine instructor and a real business man. Has extensive list of acquaintances in New England that can be developed as patrons for winter resort. Highest rating by manufacturers as a business man. For complete details write: Ad 1010, % Golfdom, Chicago.

For Sale or Lease: One of the best and most beautiful golf courses in the state. Nine sand greens, two grass greens, house and clubhouse. Has city gas, electricity, water and sewer. Address: Ad 1043, % Golfdom, Chicago.

Experienced successful pro-greenkeeper now employed at a municipal course desires new location due to political aspects of present job. Highly recommended by performance and previous employers as instructor, practical course maintenance man, and thoroughly competent in pro-greenkeeping job. For full particulars address: Ad 1013, % Golfdom, Chicago.

College graduate desires position as assistant to prominent professional. Has deep interest in golf instruction and merchandising. Was leader at school. Captain of college golf team and in upper ten per cent scholastically. Has had experience—one summer as assistant at small club. Since graduation has had two years' business experience. At present employed. Age 23. For complete details and reference write: Ad 1011, % Golfdom, Chicago.

UNITED STATES PATENT OFFICE

EARLE M. BARROWS OF MINNEAPOLIS, MINNESOTA
AGROSTIS STOLONIFERA

Application filed August 20th, 1934. Serial No. 740647

“A distinct and new variety of AGROSTIS STOLONIFERA as herein shown and described, characterized by its ability to produce a very large number of plants per given area, forming a tough and resilient turf of great density; its slender leaves involute to conduplicate in form; its slender culms; its upright habit of growth in turf form; its freedom from tendency to become grainy or fluffy in turf form; its ability to withstand close mowing without injury; its high resistance to disease; its hardiness; and its ease of vegetative reproduction.”

Quoted from final allowance by the United States Patent office of claim on

NORTH WOODS BENT

Grown by EARLE M. BARROWS

For Better Fairways and Greens

MILORGANITE
THE UNIVERSAL FERTILIZER

Counterbalances the UNKNOWN Factor

Three known factors—(1) Climate; (2) Soil; (3) Seed. One unknown factor that outweighs all three — Weather! Yet, somehow, you must plan now to maintain or improve fairways next year.

Counterbalance the unknown factor, insure success in spite of weather, by giving Milorganite, the universal fertilizer, the key place in your budget.

Milorganite is the fertilizer that has been uniformly successful over a ten-year period in all climates, on all soils, with all types of seed and under ALL weather conditions. Hot or cold, wet or dry — Milorganite releases its plant foods gradually, consistently, continuously.

These facts, known through experience by most Greenkeepers, explain why more Golf Clubs every year are depending on Milorganite to insure better fairways and greens.

THE SEWERAGE COMMISSION, Milwaukee, Wis.

GOLF CLUBS USE MORE MILORGANITE THAN ANY OTHER FERTILIZER
