Advise your members to SAVE THEIR USED ACUSHNETS

To help you supply the demand for Acushnets that is bound to come, we are considering the advisability of establishing a Re-covering Service. This service would apply to Acushnet Balls only, of course, and would operate only through you Pros.

Naturally, we would not dare take the responsibility of re-covering or marking with the Acushnet name, any balls other than Acushnets... But the Acushnet 85¢ and 65¢ grades are so well constructed that they will, we feel sure, deliver a lot of good golf to your members, if properly re-covered.

Details, costs and prices have not yet been fully worked out — and, of course, the whole plan depends upon the sanction of the Government. But we believe we can work out an arrangement whereby you will benefit, and your members will be able to play more or less as usual this summer.

We would like your opinion on this scheme in general. So far as we have heard to date, the plan, in some form or other, seems to have acceptance among Pros, as it promises at least some assurance that the Pros' best source of revenue — ball sales — will be continued to some degree.

For the time being, then, simply advise your members to save their Acushnets. We will keep you up-to-date on developments. Acushnet Process Sales Company, New Bedford, Mass.

Worthington Cutting Units for 1942 and the "Duration"

improved to give you the maximum of operating- and maintenance-efficiency at a minimum of Labor, Time and Cost

The Worthington Golf Chief and Worthington Multi-gang with 7 of these modern Cutting Units cut a swath of 16 feet. We believe it is the fastest, most flexible, most efficient and economical gang-mowing outfit for Golf Courses in the world.

Each year since 1914 Worthington engineering research and practical operating experience have been the bases of continuous improvements to meet changing mowing conditions and the demands of our customers for the very latest and most acceptable machine in its field. There are 28 years of this policy of leadership in the new 1942 Worthington Cutting Unit. As always, it is, today, the most modern and up-to-date cutting unit available.

CHECK THESE OUTSTANDING FEATURES

1. Fly Knife Steel—wider than ever, harder than ever. (Minimum Rockwell C-35.) Wears longer—lasts longer.
2. Fly-Knife Shaft made from largest diameter section cold-rolled steel ever used for this purpose.
3. Fly-Knife Blades supported by six steel discs electrically welded to blades and to shaft.
4. Separate machine-cut gears for each ground wheel.
5. Sand- and dust-proof gear housings.
8. Sturdy, demountable rims. If worn or broken accidentally, can be replaced in a few minutes at less than half the cost of a whole new wheel.

Golf Dots .... and Dashes---

By K. R. SUTPHIN

DISTRICT of Columbia District Women’s GA has scheduled its tournaments, as far as possible, at clubs near street car and bus lines. Defense bonds and stamps are prizes for the women’s events and to the pros in the pro-ladies event. Home club pros are to be paid $10 a tournament inasmuch as purchase of bonds and stamps precludes purchasing of pro shop merchandise as prizes. . . . Jack Miskell, pro at Poland CC, Youngstown, O., is adding 25 cents to club tournament entry fees this summer, the extra two bits going to the Red Cross. At the Poland $500 Open this summer the entry fee will be boosted 50 cents and the admission a quarter, with the boost going to Red Cross.

A WAR MESSAGE

to

ALL EMPLOYERS

* From the United States Treasury Department *

WINNING THIS WAR is going to take the mightiest effort America has ever made—in men, materials, and money!

An important part of the billions of dollars required to produce the planes, tanks, ships, and guns our Army and Navy need must come from the sale of Defense Bonds. Only by regular payday-by-payday investment of the American people can this be done.

Facing these facts, your Government needs, urgently, your cooperation with your employees in immediately enrolling them in

A PAY-ROLL SAVINGS PLAN

The voluntary Pay-Roll Savings Plan (approved by organized labor) provides for regular purchases by your employees of Defense Bonds through voluntary pay-roll allotments. All you do is hold the total funds authorized from pay-roll allotments in a separate account and deliver a Defense Bond to the employee each time his allotments accumulate to an amount sufficient to purchase a Bond.

You are under no obligation, other than your own interest in the future of your country, to install the Plan after you and your employees have given it consideration.

WHAT THE PAY-ROLL SAVINGS PLAN DOES

1. It provides immediate cash now to produce the finest, deadliest fighting equipment our Army and Navy ever needed to win. 2. It gives every American wage earner the opportunity for financial participation in National Defense. 3. By storing up wages, it will reduce the current demand for consumer goods while they are scarce, thus retarding inflation. 4. It reduces the percentage of Defense financing that must be placed with banks, thus putting our emergency financing on a sounder basis. 5. It builds a reserve buying power for the post-war purchase of civilian goods to keep our factories running after the war. 6. It helps your employees provide for their future.

To get full facts on installing the Pay-Roll Savings Plan, write TODAY to:

Golf Ball Washer

Spring is in the air — and with an extra hour of light each day! Golfers everywhere will soon be “itching” to get out on the course and “smack ‘em”! But the luxuriant juicy green grass of early spring stains balls quickly — and dirty stained balls are hard to find! This year more than ever before golfers are going to appreciate an easy-to-find sparkling white ball. Lewis Washers at every tee can keep them that way! Remember, ONE DOLLAR TRADE-IN allowance still offered — write for details.

BUT I'M SAFE WITH
FUNGOL
HIGH POWER MULTI-CHEMICAL FUNGICIDE AND VERMICIDE

Fungol has been field and laboratory proven. Hundreds of Greenkeepers and Managers have found that you can safely rely on it for quicker action in treating sudden outbreaks of both Large and Small Brown Patch... and for dependable prevention of these fungous turf diseases.

Fungol has been developed by advanced processes, including chemicals not found in other ordinary fungicides.

Its soil retention and lasting properties are unequalled, making it most economical.

Many Fungol users have been won alone by the extra chemicals supplied at no extra expense for combatting Earthworms, Sod Webworms, Cutworms, Grubs, etc.

In spite of present high chemical prices, low cost of Fungol usage will surprise you. Send for literature and free sample.

McCLAIN BROS. CO. - CANTON, OHIO

Cup team that played in the U. S. in 1927.

A wise old head in the golf business thinks that alarm about golf ball shortages restricting club activities is groundless. If the pinch becomes severe golf balls can be rented, he says... George Pulver, well-known pro at The McGregor Links, Saratoga, N. Y., warns pros that if they don't ration golf ball sales they may have to buy balls back from members they allowed to buy too many balls. "Either buy the balls back at a premium to keep peace in the club and fulfill their function, or be out of luck," Pulver forecasts.

"Save Golf Balls" is heading of an ad in the Pinehurst (N. C.) Outlook, signed by pros Roy Grinnell, Bert Nicolls, Roy Bronsdon, Harold Callaway, and Johnny Capello. The ad recommends instruction that makes the hitting more precise and reduces ball wear... Parke Carroll, sports editor of the Kansas City (Mo.) Journal, gave pro instruction a strong plug
Mercury has so many wartime uses that fungicides containing it in quantity will not be obtainable at any price. So until satisfactory substitutes are available, it behooves every greenskeeper to accentuate practices which minimize disease.

Everybody knows the danger of over-nitrogen feeding. Brown patch strikes soft, lush turf with a devastating effect. Tender grass aggravates Dollar Spot, too.

But Dollar Spot is a starvation disease also. Nitrogen hunger is almost as bad as too much, for it makes grass more susceptible to attack. Repeated, temporary shortage of nitrogen is one cause for repeated Dollar Spot attacks throughout the summer on many greens in northern regions.

By providing a uniform and continuous supply of nitrogen, Dollar Spot will be less frequent, and damage less severe. The best way to attain this goal is to rely upon a true organic such as MILORGANITE to furnish the bulk of the nitrogen. With it the feeding program is simple, because soil processes gradually release water insoluble organic nitrogen as needed. It is only necessary to use a rate which will keep grass growing without making leaves soft.

To control growth with soluble nitrogen fertilizer is not simple or easy. Unless applied often, at light rates, there will be a rapid burst of growth right after fertilizer is applied. But the effect disappears quickly, too. That is when Dollar Spot strikes again and leaves bad scars in its wake.

The use of lime when needed, judicious and careful watering, elimination of surplus matted grass, etc., also help minimize Dollar Spot.

A copy of Bulletin 3, outlining a sensible fertilizer program for greens, will be gladly mailed you upon request. It will help you devise a feeding program for the entire season. The services of our agronomists and soil testing laboratory are available to Milorganite customers, and others too, with certain limitations. Address:

THE Trojan

FOR SMOOTH HIGH SPEED CUTTING AND RUGGED PERFORMANCE

Stand the 241 pound Trojan up alongside any gang mower on the market and compare its high grade construction piece by piece and part by part, and we think you will find for rugged strength it can't be beat.

Then put it on heavy turf and run it eight or ten miles an hour and see the beautiful smooth job it will do, and the way it wades through the toughest kind of cutting.

There's a reason for the fine reputation that the Trojan has built up over a ten year period, and that is precision workmanship and highest quality materials throughout.

PRECISION BUILT: The Trojan is engineered up to the highest quality standards. Built with machine-cut hardened steel gears running in oil-tight housings.

HIGHER OPERATING SPEEDS: The Trojan was designed to operate successfully and do a smooth job of cutting at speeds up to ten miles an hour. It is a closely coupled mower with a short wheelbase, and the 8½ inch diameter six blade reel is heavy enough to do the job at higher than normal speed.

LARGE DIAMETER REEL: The degree of success of Trojan Mowers has been in their large diameter 8½ inch revolving reel. It takes a big heavy reel to cut thick grass, and that's what you get in the Trojan.

HARDENED ALLOY STEEL BLADES: The reel blades and bed knives in Toro Trojan Mowers have a minimum hardness of 35-C in the Rockwell Tester, or 330 Brinell. This doubles the life, compared with soft steel blades, and provides big savings for you in upkeep.

CASE HARDENED GEARS: The Trojan has machine-cut hardened steel gears running in oil, and they normally will outlast the mower. Barring accidents, you will never have to replace the drive gear of a Toro Fairway Mower.

ROUGH CUTTING: The rugged construction and heavy 241 pound weight of the Trojan, makes it an excellent mower for both fairway and rough cutting.

GRADUATED ROLLER BRACKETS: Toro Fairway Mowers have a 3½ inch steel roller. The Trojan has notched and graduated brackets to easily regulate height of cut.

Outline Plan To Utilize Club Properties In War Effort

By HERB GRAFFIS

Appoint Franklin L. Miller to inform War Department how golf club facilities and personnel can be of most service to National defense.

FRANKLIN L. Miller, prominent in Cleveland district golf circles, and an officer in the U. S. Army in the first World War, has been appointed Expert Consultant to the Secretary of War. Miller's duties have to do with acquiring information to enable the War Department to make use of golf club facilities and personnel in connection with civilian defense and military matters.

Conferences on possible utilization of golf club properties and the education of golf club members to serve in defense work have progressed toward formulation of an outline of a plan. Preliminary work of surveying golf's available resources is well advanced. The survey even in its present incomplete form indicates that golf may contribute a hitherto unregarded and highly valuable and unique service of sport to national defense.

Must Continue On Sound Basis

The conferences also have revealed substantial reasons, in addition to the physical fitness and mental balance factors, for maintaining golf club operations on a sound basis.

Prior to the War Department's interest in the Miller original brief on possible functions of golf clubs in war-time, thought of golf facilities for war use generally was restricted to consideration of fairways as plane fields. GOLFDOM contained reports of suggestions concerning such use being submitted to the War Department. British experience has reminded that fairways also might possibly provide landing areas for enemy planes, hence there have been installed some ingenious trapping arrangements of a character not designed to catch stray golf shots.

An outline of the work that might be accomplished by golf clubs in civilian and national defense was first presented to the War Department by Miller, Jan. 29, 1941. Some high spots of the plan originally set forth by Miller:

First: Approximately 820 golf clubs are members of the USGA. In addition, there are perhaps 2400 other private golf clubs which would undoubtedly actively participate in an organization directed solely for home and national defense. These clubs have an estimated average membership of 200 men, and there is an equal number of women and girls who are
If you want to see a very effective mailing enclosure for golf clubs, send a stamped return envelope to A. C. Staft, gen. mgr., Golden Valley GC, 410 Northwestern Bank Bldg., Minneapolis, Minn., and ask him to send you a copy of the "Uncle Sam Says Keep Yourself Physically Fit" folder.

The club and its members are giving this folder wide circulation by sticking it in with their letters.

* either golfers or are members of families at the head of which are golf club members.

In addition, there are several hundred thousand golfers playing upon 1921 public, semi-public and fee courses. Here also is a group of men and women of potentially two million who might well be organized under the same banner.

Second: It will make these people actively conscious of the need of defense measures; will make them think about defense, talk about defense and do something concrete about defense. It will create a receptivity which will be the basis for a fine morale.

Third: There is this sheer number of men and women ready and available for training in various ways for active defense work in the national interest.

Fourth: In the large majority, the members of these clubs are beyond the age of service in the regular establishments.

Fifth: Most of these men and women want to be, and should be, connected with active phases of defense in a personal, physical way.

Sixth: These men and women represent in some degree every business and profession and should be organized to use their special qualifications, training and ability to further and improve nation-wide preparedness.

Seventh: They are men and women who can and should contribute directly in time and money to the expense of national defense.

Eighth: Most of them are physically able to participate in various kinds of defense measures.

Clubs Located Strategically

From the standpoint of the real properties of these clubs, there can be listed these advantages:

(a) Golf-club properties and golf courses generally encircle the centers of population and industrial activity. Therefore, they are strategically situated to deal with external or internal defense.

(b) They are located, as a rule, on terrain well-adapted for fortifications and camouflage.

(c) Lying near cities and towns, golf courses and buildings could be used for places of assembly, for hospitalization, for evacuation concentrations, for recreational activities and other needs that develop in handling mass populations under emergency or war conditions.

(d) Golf clubs have motorized traction equipment and trained crews, and often, independent water supplies.

With these positive facts in mind, a way should be found to use the stored-up energy of this man-and-woman-and-money power. Organization work should be conducted with a view to training these thousands of men and women in various defense and emergency activities, such as: first aid, ambulance service, fire wardens, air-raid wardens, policing, traffic control, bomb protection, military intelligence, transportation, civilian evacuation, information.

And, as equipment becomes available and the need may arise, these additional functions under direction of the War Department: anti-aircraft batteries, machine-gun companies, mobile artillery batteries, armored-car groups.

The organization of these golf clubs into defense groups frequently would have little conflict with city or town organizations because clubs are often outside corporate limits; therefore, they offer an extension of service groups otherwise left largely unorganized.

Defense Bonds and Stamps

Are Remote Control Prizes

The third annual Remote Control national handicap tournament will be played June 13 this year. Approximately $6,000 in defense bonds and stamps will be given as prizes to contestants invited by agents of the six insurance companies comprising the North America companies group.

This year additional prizes of government bonds will be given to pros whose courses have the largest fields among the many clubs at which this event will be played. Last year 9983 players played on 1042 courses in the event.

Players in the Remote Control tourney again will be grouped in classes by sex handicaps and lengths of courses played.
