The Coming Thing

Goose-Neck Irons:
The newly designed Goose-Neck iron places the blade a little to the back of the shaft, giving the player a better sight of the ball. This same feature gets the ball into the air easier—increases back spin and ball control; reduces possibility of "shanking."

Strata-Bloc Woods:
Multiple layers of selected woods, arranged and bonded into one piece by controlled hydraulics. Five years under water and years of actual play prove that it's not affected by climatic conditions of moisture and temperature.

Golfdom
Golf...is Here!

You're looking at the forecast of fairway fashion...the top stars on performance...the standout buys for modern design, precision and balanced perfection.

You're looking at some of the outstanding numbers in the new 1948 line of Wilson golf equipment—proved in the sensitive hands of golf's great masters. The finest in our history and they're slated to bring you greater profits than ever.

**Top-Notch Strata-Bloc Woods:** Hailed as the greatest single achievement in golf club manufacture since the steel shaft.

**Top-Notch Goose-Neck Irons:** With the greatest player acceptance of any iron—bar none!

**Patty Berg Woods and Irons:** Here are the most efficiently designed clubs ever made available to the feminine golfer.

**Top-Notch Golf Ball:** With its clean click—sweet feel. It's "Blended Tension" that wins immediate preference. Pure, natural rubber thread windings, precisely controlled by electronics.

**Gruv-Grip:** This exclusive feature on Wilson woods and irons provides finer club control for better shot making. Lessens tension; gives a relaxed, comfortable feel.

Check the many new and exclusive features. You'll see why Wilson golf equipment adds up to immediate player preference—everywhere!

**WILSON SPORTING GOODS CO.**
Chicago, New York and other leading cities

Inventory for Sales Volume

Perhaps the answer to a part of his large following is the fact that he maintains such a large and varied inventory. He showed unusual foresight at the outset of World War II. He had on stock more than 1,000 dozen golf balls at the time of Pearl Harbor, and through careful rationing he was able to supply the needs of both members and non-members. He had clubs for sale throughout the war, too.

While his pro shop profits run into handsome figures, Hackbarth is also retained by the club on a salary basis. It has been a successful arrangement.

"In 40 years I have never failed to discount a bill," he declares.

While he occasionally tours his 6,400-yard par-71 layout in 75 or better, no mean performance for a man of 63 years, Hackbarth has never been much of a playing pro.

"My time has been devoted to developing golfers, catering to their needs, and creating interest in the game," he says. "I have had little time for tournaments except for the winter senior events in Florida. Fifteen pros have served apprenticeship in my shop, the most prominent being E. J. ("Dutch") Harrison. Virtually all Arkansas pros are products of this club."

"Hack" stages an average of three amateur tournaments a year at his club, including an invitational that ranks among the Southwest's best, and often is called upon to direct meets for other clubs over the state.

Hackbarth feels that the opportunity for the golf professional is not on the winter or summer tournament tour, but right in his home club. He is himself testimony to his belief.

He was asked if he would encourage a young fellow with a golfing bent to take up the life of a professional.

"I would if he would take pains to get started correctly," he replied. "It's not just a matter of hitting the ball 250 yards or better, or scoring around par. Most young pros make their mistakes in not learning all the details of the game from the ground up, that ground being his greens, his fairways, and his shop. They don't wade into the business fundamentals that are so important in the running of a successful pro shop."

He could have long ago, but Hackbarth has entertained no thoughts of retiring. As able and quick as many men his junior by years, he can look forward to years of operations at his same old stand.

"And besides," he points out, "what would I do with myself? Golf is the only thing I know."

ATLANTA'S NEW PEACHTREE GOLF COURSE TO OPEN SOON

Dr. Fred Grau, USGA Greens Section Director, left, is being shown features of Atlanta's new Peachtree Golf Course by T. R. Garlington with Robt. T. Jones, Jr. looking on. The new layout now nearing completion is on the old Ashford estate near Atlanta, Ga.
Closely knit of a heavy gauge nylon yarn in a striking assortment of colors, NY-MITS prevent loss — faithfully protect and hug your prized clubs. ALL NYLON NY-MITS are easily washed, will not fade — retain their original shape for a lifetime.

Attractively packaged in sets of three at $3.95 and sets of four at $5.00.

NY-AN COMPANY ALBANY, NEW YORK
Playing Technique Aid
To Greenkeeper

By EMIL MASHIE
Greenkeeper, Onwentsia Club, Lake Forest, Ill.

There are more old time greenkeepers than modern ones who scoff at the idea of a greenkeeper working on his game and spending enough time on it to become an expert or at least a good golfer. My advice to a young greenkeeper would be to spend a lot of time on improving his game as much as he can and on developing a keen playing and technical knowledge of golf. Pros have stepped out and taken over greenkeepers' jobs along with their own business at some clubs. I think it would be a healthy situation if the reverse were true and it certainly would be a tremendous boon to many moderate-sized and smaller clubs.

To begin with a greenkeeper who can play a respectable game meets his chairman and members in the game that had created his job.

The member's game comes first regardless what a greenkeeper may think of his course. So when you see golf from your member's viewpoint you are bound to have a more realistic viewpoint of greenkeeping.

Your viewpoint on length of grass—speed of greens, etc., will broaden and be completely authoritative if you do on the course what it originally was made for—playing, not maintenance.

If Byron Nelson were a greenkeeper members of his club would take for granted for example, that grass a certain length on greens would serve the best interest of golf and the course.

Playing and Maintenance Viewpoint

Let's play a round, starting from the teeing area. Very often a greenkeeper who thinks only of the course is apt to keep his tees too long—and golfers love short clipped tees—regardless of what greenkeepers like for their own interest and turf safety. The golfing greenkeeper can also appreciate the position of the markers as to prevailing winds and the character of the hole. By setting the markers he can make the hole vary in interest and make it difficult or easy.

If, before he hits, he wants to wash his ball he may know whether he likes the smell of his ball washer soap.

The length of rough if you happen to slice or hook is a matter of personal differences these days—one man wants to use a brassie; the other will take his penalty. But a fair rough in most instances is one that will allow one to hit half the distance that he normally would from the fairway.

The fairway length will be very obvious to all who are good enough to be in it. The golfer who uses a wood on average holes (strange as it seems) doesn't mind long grass as much as a crack golfer who hits a crisp iron. As a matter of fact a ball sits higher with longer grass even though there may be grass around the ball.

Playing to the green if the playing greenkeeper happens to hit his shot short he will soon find out if he has not watered sufficiently in front of the greens or over-watered and made it soggy. Whether he is over or short on his approaches will very often answer that question that is highly important in satisfactory maintenance. The greenkeeper may be six inches off the green and have to use an eight iron. Then he might learn that a little more mowing would make a more enjoyable shot. Or on a slope away from the edge of the green his ball might roll on the green and slowly trickle off into a trap. Then he might learn that he needs a little more grass in...
Golfcraft's new Pro Shop Laminated Woods are fashioned from hard maple veneer. The blanks are laminated to the specifications used for aircraft propeller blades and by the same exacting process. Finish is popular dark walnut, and will withstand years of hard playing in all climates and weather. Shafts are the step-type, drawn and formed from fine alloy steel, chrome finish. Hand-wound spiral perforated calfskin grips. Available for shipment in ample quantities of both lefts and rights . . . in complete sets or open stock.

that area. When he gets on a green the nap, if any (and there is plenty of it around), and speed will be very obvious to one who has interest in putting the little white pill in the hole.

**Greens Speed Problem**

Greens to me personally on the whole are too slow, and, I think I can safely say that is the thought of many golfers. Too much grass would be the greenkeepers viewpoint of the situation but to a golfer it would only mean that the greens are too slow. At this point I will say the mower manufacturers can help to solve the greens speed problem for the greenkeeper and the golfers. The greenkeeper in some instances might go light on fertilizer in arriving at a satisfying greens speed.

We have probably played several uneventful holes, and lets say on the ninth hole a ball was hit on a line into a fairway trap and buries out of sight. No one need deny that too much sand on the bank has made an unplayable lie. On another trap a ball skids through the trap and rolls and rolls—the trap means nothing—no lip or grass at the top cancels the error on the hit.

A greenkeeper can probably see as much or more for all I know while not playing but when it costs him strokes or a few dollars in a game he gets his members' sharply personalized judgment of his work.

Always uppermost in a greenkeeper's work should be the effect of maintenance practices on play, tempered with ultimate health and good condition of the course.

There are many things that can be observed better and appreciated more by playing. One of the most important is the placing of the holes, cutting sharp edges, and frequency of changes on cups.

There is nothing more monotonous to a member than to play the hole at the same location for several days. It's uninteresting to say the least. Varying the character of a hole by placing the hole while keeping in mind the location of tee markers is something that can be done very artistically with golf knowledge. It tends to break the monotony of playing the same course.

I was just a kid when I started greenkeeping in 1930, and an 85 shooter. Five years later I broke 70 for the first time and the course I was taking care of was improved, so I can't see why some can say that a golf course's need must be neglected while the greenkeeper is improving his own game.

Today, 18 years later, I hold four course records, but greenkeeping to me is still as tough as breaking course records, if not tougher much of the time.

I have noticed that when the members and the green chairman know their greenkeeper plays golf, and maybe good golf, there is less crabbing and kicking about certain conditions on the course. They know a golfer recognizes and appreciates the same conditions under which they play.

When a greenkeeper dresses and looks like a golfer and is seen out there shooting pars with members, his stock goes up. He gets in a better position to hear a lot of
The "signature" shown above was clipped from a current Power-Bilt ad . . . one of many appearing in national publications.

These advertisements are doing more than just "telling the Power-Bilt story." They're telling the nation's golfers and golf club prospects that Power-Bilts are sold only by golf professionals.

That's why, everytime a Power-Bilt club is sold, a pro makes the sale. There's the power . . . your power . . . in every Power-Bilt ad.
thoughts around the club that will help him do his work better and cooperate more effectively with his fellow workers, the pro and manager.

May I predict that in the future you will see better golfers among the greenkeepers. Fellows who were ex-caddies—as most pros are—also are fellows who can take an interest in growing grass as careers. I have been around clubs nearly all my life. I caddied at Bretton Woods, N. H., for such fellows as Francis Ouimet, Mike Brady, Walter Hagen, Gene Sarazen; worked on greens as a laborer; played part of the tournament schedule as a pro golfer. As I see and understand greenkeeping it is not glorified as it should be. It is a lot of hard work and not often appreciated.

The way a greenkeeper can help get himself and his job appreciated would seem to me to be by playing at least a pretty good game. Course maintenance is to my mind a task of great responsibility at a club. And without minimizing the qualifications, the diligence and the achievements of my very good and capable friends who head other departments of club operation I will say that the expert greenkeeper must have knowledge of even broader scope, working hours that often are longer than the lengthy day of the manager, but despite these demands of his job the greenkeeper is in many cases the department head the members think of only at rare intervals.

SEVEN CHAMPIONS IN MAY’S INTERNATIONAL MATCH

The 1947 International Golf Match, to be held at the Tam O’Shanter CC, Chicago, Saturday and Sunday, September 27th and 28th. In case of a tie, an 18-hole play-off will be held on Monday, September 29th.

The stakes are the International championship, the world’s largest golf trophy (International Cup), and $5,000 in cash, which honors and prizes will be awarded the first-place winner.

Fred Daly, British Open champion, also was invited to play.

Last year, first time this event was played, it was won by Sam Snead, 1946 British Open champion. Should the International Cup be won three times in succession by the same contestant, it then becomes the permanent possession of the winner.

Each player in this International event will receive $2,000.00 expense money.

Locke puts out on 18th in winning play-off of All-American (plus Locke) tournament from Oliver at Tam O’Shanter, Chicago, where International championship will be played Sept. 27-28. Water tower in background is 85 ft. high. Permanent grandstand includes broadcasting facilities and George S. May’s “Royal box.” Note sanding of turf in foreground by Tam’s able greenkeeper Ray Didier. It is protected against undue turf damage by heavy traffic.
