NEW SNOW-PROOF FACTORY — Bert E. Smith, President of The Snow-Proof Co., Livonia, N. Y., manufacturers of SNOW-PROOF leather preserver, which softens, preserves and waterproofs shoes, gloves, and leather goods of all kinds, announces purchase of a new factory conveniently located on a railroad siding in Livonia, with plenty of storage space for handling carload lots of raw materials. SNOW-PROOF is supplied in 1-lb., 5-lb. and 3½-oz. cans.

IMPROVED LAWN ROLLERS — Manufacturers of Dunham Water weight Lawn Rollers announce improvements to new 1948 models designed for smoother, more efficient operation. New features include self-lubricating Keystone Oilite Bearings, installed to make rollers easier to move about, easily removable aluminum pipe drain plugs to insure water tightness and speedy filling and emptying. Either water or sand may be used. For information concerning the Dunham line, address, John H. Graham and Co., 105 Duane Street, New York 8, N. Y.

INSECTICIDE INFORMATION SERVICE — Julius Hyman and Co., manufacturers of Technical Chlordane have established an Information Service Division. Results of laboratory tests, field trials and experiments conducted by the many state and federal agricultural agencies (and user experiences) with Chlordane are assembled and available as reference material. Aim is to maintain utmost accuracy in reports and uses and to provide a ready source of authentic information.

Semi-automatic golf ball winding machines electrically controlled stop at predetermined size thus speeding up production. The machines stop automatically in the event the rubber winding thread should snap.

**MacGregor Ball Manufacture**  
**Result of Five Year Planning**

A tremendous expansion in production and sales of golf balls by MacGregor Golf, Inc., Cincinnati sports equipment firm climaxes an objective of the board of directors to broaden their field of manufacturing operations in the realm of golf and collateral sports over five years ago. MacGregor directors approved expanded operations under the condition that new products must maintain the MacGregor tradition for fine quality and that the manufacturing processes be undertaken with the best craftsmanship and the most effective machinery that could be developed.

The story of the manufacture of the golf ball involves interesting sequences of operations. Processes begin with the liquid center which is molded after being preformed in a multiple cavity mold in a hydraulic press. This is the “beginning” or the “heart” of the golf ball, as in this center, a winding of fine spun-rubber thread is performed under high tension.

Quality product is maintained in the ball-winding as the wound cores are tested in a specially-built machine to check the compression of core—vital to a golf ball.

Golf ball molding operations require deft skill and timing, involving temperature control and time-gauging under heat and pressure. The liveliness of the golf ball will be destroyed in event the ball is maintained too long under heat and pressure.

Pressure amounting to hundreds of tons and a temperature of approximately 200 degrees Fahrenheit is applied, causing the balata cover-cup to become vulcanized into a perfect sphere, together with the imbedding of the well-known “dimple” indentations in the golf ball cover. Then the balls are frozen overnight with removal on the following morning. The balls next receive a very extensive “washing” process, which includes treatment with chemical solutions for removal of the last trace of dirt and grease, meanwhile etching the surface to enable paint to hold to the cover.

The first coat of golf ball enamel is applied and dried for 24 hours in a sealed, temperature-controlled drying-room. Balls receive a second coat of enamel before placement in a drying-room for seven more days. The balls are then tested for compression and grades.

After the balls are graded, they are stamped with metal dies and lettering in various colors applied for “visual” identification.

When packaged and packed in cartons, the balls are held in warehouse for seasoning prior to shipment to customers.

Preceding the marketing and distribution of the ball, MacGregor conducted hundreds of field tests, laboratory studies and had the critical analysis and observations of top-flight golfers.

**Automatic spraying machines are used for painting MacGregor golf balls.** Flowing water in the interior of the spray booth removes all fumes and excess spray as operator feeds and removes painted balls while in same position.

February, 1948
MURPHY, MASTER MERCHANT
(Continued from page 33)

present estimate of most of us and it is responding quickly to smart development work.

Here at Glen Oaks we have something new in the way of storing clubs. We have built an addition to the pro shop to store the women's clubs. Like most other clubs, we have a full quota of men's clubs and needed the addition which we reserved for the fairer sex.

We have a considerable number of new junior players and their clubs are stored with the women's. In addition, we have had junior classes, which operate at our new driving range, one of the finest in the East. It might be interesting to note that one of the juniors, "Cooky" Swift, won the Metropolitan junior championship at Cedar Creek club at Glen Cove. She, incidentally, is a protege of my brother, Ed (Senator) Murphy.

As you perhaps know, Glen Oaks led the entire country in raising funds for the Red Cross, USO and the other service organizations. That's something else to be borne in mind by all pros, whether they are younger fellows who were in military service this time or men who were too old for active service this time. The club established itself as an active community factor during the war and the pro, along with his members, realized that his responsibilities extended even further than providing thorough and competent service to his members. He had to participate in community service and contributed to that work his capacity for developing an extension of club spirit.

We are seeing at Glen Oaks an unprecedented demand for lessons. I have added to my staff Pete Burke, brother of Billy, ex national open champion. I am sure that now, more than ever before, it is essential that the head pro have on his staff the best possible teaching assistants as it is utterly impossible for the head pro to care for all the teaching along with his numerous other important duties.

Most of us had to learn the hard way about caring for our members' needs of equipment during the war. There never was a wartime shortage of clubs or balls at Glen Oaks or at Lakeville which I operated during the war years. In fact during those years I went out of my way to assist other professionals who were not as fortunate as I in having equipment.

I learned something from them, and I hope that there was something they were able to learn from me, as all of us are in a business that is growing so rapidly and presenting so many new problems along with new opportunities we'd all better exchange experiences to promote the general good of pro golf.
