Club champs and fourth flighters alike mis-hit shots occasionally. Some of these players feel a ball should stand up under *any type of miss*. Surely they are entitled to their opinion... so let’s keep ’em happy!

Sell them the Red Titleist, a top-grade ball created specially for them — and *boy*, have they gone for it!

In fact, we’ve never seen a ball welcomed with such instantaneous and overwhelming acclaim. In the one short year since Red Titleist was introduced, sales have soared — literally sky-rocketed! The Pros who have pushed it have really hit the jack-pot.

And this popularity is not only continuing, but growing every month.

So, again we say to you, sell this amazing ball to those players for whom it is specifically designed — and you’ll make friends and profits, both.

National Open this year at Oak Hill CC, Rochester, N.Y., had biggest gate, biggest total revenue for USGA and host club of any USGA tournament and probably of any golf tournament. USGA received $95,000 of $170,265 admissions. USGA also got cut of $100,605 program net revenue. Parking brought to club $11,403. Income from food and beverages was $43,600 and from other concessions $39,055.

Income to Oak Hill will pay expense of remodelling both courses. The job done in rebuilding the Oak Hill East course on which the championship was played was miraculous. Badly handicapped by bad weather, Supt. Elmer Michael and his staff finished the reconstruction to plans of Robert Trent Jones a week ahead of practice rounds. Acres of sod from West course used in giving the remade East course a finished and polished look.

Contestants rated design, mowing and condition fairest combination the Open has presented in several years. Pre-tournament guesses were that the event wouldn't be won by a dark horse as sometimes is case on a tricked-up course.

Trent Jones guessed score between 280 and 284 would win. Middlecoff's winning 281 (one over par) contained a 7 in each of the first two rounds. First time there's been 7s on a winner's card in modern Open history. Box score compiled by Charley Bartlett, Chicago Tribune golf writer, showed Middlecoff with 20 one-putt greens, Hogan with 15, Boros with 22. Hogan's miss of a three-footer on the 17th of the fourth round will be long remembered because it was on TV but he was blowing many putts 6 feet and under during the four rounds. If Hogan could have holed the percentage of these putts canned by Middlecoff there would have been three more Open titles in the Hogan record.

Our hunch, based on remarks of doctors, is that Hogan turns his head so often sighting a putt while he's standing over it his accuracy is diminished. Middlecoff is one of the steadiest-headed putters playing these days. Before Doc won the Open he said he wouldn't be playing in the PGA. Said it's too much of a grind with his hip trouble and hay fever. Repeated "That hot marathon last year almost killed me."

Performance of Julius Boros in tying with Hogan at 282 was especially notable considering heavy exhibition schedule he's been playing. That usually wears them out as tournament threats. The Moose had 24 one-putt greens in the Open, holed a chip. Ted Kroll, who finished tied with Ed Furgol and Peter Thomson, in third place with 285 went 4-7-5-4 against a par of 3-4-4-4 to fade at the finish.
Lawn Mower
LAPPING MACHINE

A compact, light-weight machine for lap-
pln9 al models of Hand, Power and Gang
Mowers! May be easily used on work bench
or floor, eliminating the lifting of heavy
mowers. The simple height adjustment for
the real shaft may be used from 4\(\frac{1}{2}\)" to
10\(\frac{3}{4}\)". Equipped with several attachments
to fit different real shafts. Metal blocks for
rollers. Steel stands to support the mower.

ed real good until the last round when he
started by batting one out of bounds and
finished with a 78 . . . The Open gets the
apple higher than George May's World $50,-
000 first prize . . . Why? . . . That's anybody's
argument . . . Maybe it's because people
remember the names of National Open win-
ners.

This Open set a record — as far as we
know — on rules decisions made by USGA . . .
Five of them . . . Everybody got off easy . . .
Luckiest was Jackie Burke who in-
advertently signed a scorecard giving him a
stroke lower than he took . . . USGA slapped
on two-stroke penalty instead of disqualifica-
tion which has been the treatment before the
rule was eased . . . Gallery comment was that
the pros have been playing by "PGA rules"
on the tournament circuit and have become
careless . . . No justification for that belief
USGA rules — the only official rules of
golf — are strictly enforced at PGA tourna-
ments.

Golf merchandise exhibition tent innova-
tion was a flop in selling merchandise . . .
Usual style display such as at Masters and
previous Opens a better arrangement for the
gallery . . . Pro Charley McKenna did pretty
good business in his shop during the Open . . .
With clubhouse absolutely jammed, Mgr.

This LARGE Royer Shredder will elimi-
nate costly and backbreaking hand
shovelling. It can handle the charge of
an eight cubic foot tractor bucket as
rapidly as the bucket can be brought
into charging position, making large ca-
pacity shredding a one man proposition.

The material fed into the hopper
is combed from the bottom by
the rapidly moving teeth of the
"combing belt". During the
shredding the material churns
rapidly, providing a perfect
mixing and blending action
for production of top dress-
ing.

There is a Royer that will do your shredding or
mixing job at low cost . . . regardless of your
capacity requirements . . . from 4 to 150 cubic
yards per hour. Write for Bulletin 56-SY giving
information on all models . . . stationary or
portable . . . electric motor, gasoline engine or
belt-to-tractor driven.
One of the fine courses piped with Cast Iron

A fairway irrigation system, piped with cast iron, is an investment in better playing conditions and a healthy membership—a permanent investment without replacement or maintenance expense. The first cost is the last cost. Cast iron pipe serves for a century. It is the standard material for underground mains. Sizes from 2 inches. Address inquiries to The Cast Iron Pipe Research Association, Thos. F. Wolfe, Research Engineer, Peoples Gas Building, Chicago.

A REPORT ON KROMAD FROM AGRICULTURAL STATIONS THROUGHOUT THE COUNTRY

No. 4 in a series of reports on KROMAD*—the new broad-spectrum fungicide developed by Mallinckrodt.

To increase your understanding of this new product, here is what leading plant pathologists and turf experts at agricultural experiment stations report on KROMAD.

At these stations the performance of KROMAD was closely checked under controlled conditions. Detailed records were kept on KROMAD-treated plots and check plots. Further, these studies were conducted in several widely separated states with different climatic conditions and disease problems.

Here is a condensed cross section of these reports.

TEST AREA No. 1
Three test plots were under observation when brown patch hit toward the end of July. An immediate application of KROMAD, followed by another a week later, promptly brought the disease under control. The plant pathologists stated that KROMAD did an excellent job on all three plots throughout the season.

TEST AREA No. 2
A green heavily attacked by dollar spot was first sprayed with KROMAD on July 5th. At the time of the initial spraying the number of dollar spot lesions on randomly selected plots (four square feet each) averaged 154. It is interesting to see how KROMAD brought the disease in these test areas under control.

<table>
<thead>
<tr>
<th>Date</th>
<th>Lesions Were Counted</th>
<th>Average Number of Lesions</th>

<td>0.4</td>
</tr>
</tbody>
</table>

The pathologists added that there was no injury to the turf following any of the treatments.

In other areas pathologists came to the same conclusions regarding the ability of KROMAD to control dollar spot. One reported that KROMAD provided excellent control of both dollar spot and brown patch with no unfavorable effects after application.

TEST AREA No. 3
In this area test plots were treated on a regular preventive schedule with KROMAD throughout the year. These plots remained free of typical leaf spot damage caused by fungi such as Helminthosporium and Curvularia, while the untreated adjacent areas were badly injured by the fungi. In the opinion of the plant pathologist KROMAD is an economical and effective control for leaf spot diseases.

TEST AREA No. 4
Although we have not yet gathered sufficient evidence of the effectiveness of KROMAD against Pythium, the following experience is interesting.

Hot, damp weather, together with poor drainage, resulted in a heavy infection of Pythium in a particular area in the Northeast. The attack was so severe that turf in another plot in the same area was completely killed. The plot severely attacked by Pythium was divided into 28 areas (ten square feet each). Six chemicals were tested on the plots. The plant pathologists reported the six chemicals showed varying degrees of "Pythium blight" control; however, plots treated with KROMAD exhibited the greatest reduction in the disease.

CONCLUSIONS:
With every new test we find additional proof of the capabilities of KROMAD. It is living up to expectations as a truly effective broad-spectrum fungicide.

Discuss KROMAD with your Mallinckrodt distributor...he can give you more information. If you wish, write us. Then, if you have not already done so, try KROMAD this month during hot, humid disease weather.

Mallinckrodt Chemical Works, St. Louis, New York.

DAVIS SPRINKLERS

The prime requisite of fine turf, greens, tees, fairways and lawns is a sprinkler which can give uniform distribution and coverage of large areas, rotate evenly and stand up under hard usage. We have sprinklers with these and many more qualities.

Write us today

Oak Hill's present pres. . . . Saturday prior to start of the Open Rochester CC had a gala dinner at which honorary membership was given its former pro who began a sparkling career in golf as a Rochester CC caddie, Walter Hagen.

Best job we've seen of handling turf conference proceedings is publication of 1956 conference of Midwest Regional Turf Foundation . . . Papers were digested and edited expertly by W. H. Daniel, Executive Sec., Midwest organization . . . . Copies were sent to the 485 attending the conference, supts. of Midwest member clubs not attending the conference and to a press list . . . . Additional copies are available from Daniel at Purdue University, Lafayette, Ind., at $1.

Three noted veterans were lost to golf in June . . . Robert A. Gardner, 66, National Amateur champion in 1909 and 1915, and contestant in numerous Walker Cup and senior international matches, died of a cerebral hemorrhage, in Lake Forest (Ill.) hospital June 21 . . . He won his first National Amateur when he was 19, youngest to win this title.

Paul H. Hyde, 67, died on the 8th green of the Highland G&CC, Indianapolis, during the Western Senior's championship. He was playing in a heavy rainstorm and died after exploding a trap shot . . . . He was captain of the Williams College team and Kansas amateur champion when he was a youngster.
Robert A. Moore, Vice President, Aquatrols Corporation of America, discusses important golf course applications for Aqua Gro.

Localized Dry Spots become a major problem during these hot dry summer months. I don't know how many size 14 shoes pound your turf from early morning till night, but I do know the increased traffic aggravates your maintenance of these areas. Deep and rapid watering of turf is a continuing maintenance problem. Many times areas are not uniformly watered because of Thatch, Hard Spots, Slopes and Compaction.

Laboratory and field tests have proven beyond doubt that Aqua Gro makes water penetrate up to twice as fast and ten times as deep. Water is no longer shed by matted or thatched areas that have been treated with Aqua Gro. Water quickly soaks into Aqua Gro treated banks and slopes. Water penetrates deeper into hard, compacted areas. By making water "wetter," Aqua Gro gives a uniform distribution of moisture throughout the soil.

Water-logging and over-wetness can often be traced to neighboring Localized Dry Spots. In endeavoring to water these areas, a temporary summer labor force often over-waters the surrounding turf. Treat these Localized Dry Spots with Aqua Gro and make watering quicker, easier, and more uniform.

Dew eliminated 'round the clock. (Read independent report, May GOLFDOM). Aqua Gro adheres to the blade of grass, and reduces the interfacial tension of the dew droplets as they form. The dew droplets can't cling to the blade, but run down the stem into the ground. Aqua Gro saves time ... labor ... money ... pays its own way!

Easy to apply, Aqua Gro mixes readily with water for quick, easy application by any spray or sprinkler equipment. Aqua Gro is compatible with all agricultural chemicals, insecticides, fungicides and herbicides.

Superintendents Report After Using AQUA-GRO

"Wetter Water Solved Many Turf Problems"

Effects of Thatch Are Cured

Areas suffering from the effects of thatch are cured by one full treatment of Aqua-Gro. Subsequent waterings percolate freely through the thatched areas. Wet without waterlogging. Aqua-Gro is economical, one application costs approximately 75¢ per 1000 square feet.

Effects of Hard Spots Eliminated

The effects of hard spots on greens are eliminated. Treated water penetrates quickly and deeply into the soil. Uniform water penetration in soils reduces tendency to over-wet areas next to hard spots.

Dew Eliminated

Periodic application of Aqua-Gro to greens prevents formation of dew 'round the clock. Fungus growth is discouraged. Costs approximately 20¢ per 1000 square feet. A considerable savings over other methods of dew removal.

Deeper Water Penetration

Plugs of earth from compacted, hard-to-wet areas prove water penetrates up to 600% greater depth if areas are treated with Aqua-Gro. More even distribution of water in the soil results in less frequent watering and better control of turf.

"AGRICO and AGRINITE beat the CRAB-GRASS PROBLEM!"

—says Frank Votta (inset), Supt., of Essex County Country Club.

Here's a good way to keep your turf density up and cut crab-grass down to a minimum, as told by Frank Votta, Supt., of the beautiful Essex County Country Club:

“Our principal problem for years was the lack of turf density and the resulting crab-grass problem.

“Three years ago, I increased the feeding program of all the turf areas, using Agrico Country Club Fertilizers and Agrinite. This program helped me produce vigorous turf with the desired texture, color and density. With results like these, you can see why I say Agrico Country Club Fertilizers and Agrinite make a great team for the production of beautiful turf!”
