MAKE YOUR SILENT PARTNER A
HARLEY-DAVIDSON GASOLINE OR
ELECTRIC GOLF CAR

No noise at all when you're swinging, just a whisper when you're riding — Harley-Davidson's naturally-silent electric model is the only car available today in which every major component has been engineered specifically for golf car use. This special design care keeps Harley-Davidson cars out on the course . . . out of the shop. It's true of the gas car, too! Take Dynastart, an exclusive feature that combines starter and generator in an integral unit controlled by the accelerator pedal. Depress pedal and engine starts instantly, quietly. Release it and engine stops in quiet consideration of your golfing concentration. Write today, or see your dealer for complete information on purchase, rental or lease plans to match your individual needs.

HARLEY-DAVIDSON

Quality-Engineered GASOLINE and ELECTRIC Golf Cars

May, 1964
treated on all sides with a roller coat of colored Minwax to ease the movement of bags and preserve the chipboard against wear and moisture. Some members had the pro staff carpet their sections.

Costs are always important to club management. This job, exclusive of paint finish, ran $4.83 per cubbyhole. Three-quarter inch plywood would have cost $1.00 more per section, but it is felt that the plywood would be subject to greater splintering deterioration and bag damage. Costs between different club installations and various regions of the country will vary quite considerably.

$350,000 Clubhouse
(Continued from page 46)

here than in the main dining room.

The pro shop is located on the east end of the clubhouse, and is only a short distance from the first tee. The sales display room is 25 feet wide and 40 feet long and opens into an alcove where clubs are stored. Behind this is Pro Don Dunkelberger’s office.

Eventually, about 2,400 residences will surround the Canyon Creek course. The subdivision is being developed by Wallace Investments, Inc., which has its headquarters in Dallas. As of Jan. 1, about 250 homesites had been sold in the subdivision. The fact that 10,000 people someday will live in the Canyon Creek area doesn’t mean that the club will be overrun with golfers. The course is not being used as a come-on for the sale of real estate. Memberships in the club weren’t offered until the clubhouse and all 18 holes were completed last summer. The clubhouse has been built to accommodate between 250 and 300 members and when this quota is filled, Canyon Creek CC doesn’t plan further expansion of its membership.

The manager of the Canyon Creek club is H. C. McSwain, who served in the Air Force for 21 years and got into club management work shortly after he was retired in 1961. While in service, McSwain, a graduate of the University of Texas, was in charge of officers’ clubs from 1955 until the time he was discharged.
54 regulation-length holes are proving the benefits of General Electric lighting

Night golf works for Tall Pines. How about you?

If you're waiting for night golf to prove itself, the proof is in. General Electric has already lighted 54 regulation-length holes, with more going in weekly.

And the success stories are piling up. For example, when the Tall Pines Golf Club in Sewell, N. J., installed its 9-hole G-E lighting system, we told them it would pay for itself in four years.

"After several months of operation, that General Electric estimate looks conservative," says Pete McEvoy.

"We expect the system will be paid for before the four-year period is up. Then those extra dollars will come in as extra profit. Lighting is giving us a better return than we've made on any capital investment in the course.

"General Electric was a tremendous help in getting our course lighted," say the McEvoy's. "Ours was the first regulation-length course ever lighted, but their experience with small courses and a number of individual regulation-length holes kept us from making a lot of mistakes that could have been costly."

Now that this unequalled G-E experience has been multiplied many times, isn't it time you took advantage of it? Your G-E Sales Engineer can help you light right the first time and avoid the additional cost of corrections. Call him today or send in the coupon below.

May, 1964
Condemnation Suit
(Continued from page 48)

"The cost of carving a golf course out of a wooded tract in an identical setting, with a similar view, surrounded by mountains and wooded property, in our opinion, is the type of evidence which was held to be inadmissible in Anderson-Tully Co., v. United States, 189 F. 2d 195 (5th Cir. 1951) ***"

Prohibitive Costs?

"If the owners' argument is accepted, then in future condemnation proceedings, owners of such structures or improvements as arbocultural nurseries, parks, cemeteries, tennis courts, croquet courses, bowling greens, and special purpose farms, located in forested areas, could introduce reproduction costs in evidence and include therein the cost, however prohibitive, of clearing the land of woods, stumps, roots and stones. We are loathe to endorse this view as the law."

The USGA came into the picture when a government witness testified: "To reproduce the Kinzua Valley Golf Course in its condition as of Sept. 19, 1961, would cost $57,400, while to reproduce it as changed in design to meet minimum current USGA standards would cost $83,317." In regard to this testimony, the Court said: "The court's charge instructed the jury to disregard the latter figure as reproduction costs, but permitted the jury to consider it for whatever questionable utility it may have had in reflecting market value. Clearly, the $83,317 was not reproduction cost evidence in its proper sense, i.e. the cost of reproducing a structure or improvement according to its own particular design. Accordingly, no error was committed in so instructing the jury."

Not in Neighborhood

The testimony of another Government witness who testified in regard to the sales of other golf courses, testimony to which the Kinzua owners objected because the three courses mentioned were not in the immediate neighborhood, was concerned with courses in New York State.
The bags that excel in the supreme test of golf... the rigorous day-to-day punishment of the "Tour". Custom-crafted of luxurious Continental leather, the Touring Pro golf bags are available in the three colors as shown. Visit your pro shop and see the distinguished selection of Golfcraft bags that are styled in a price range to fit you. Check, too, on the new and exciting Astro-jet woods and irons.

seedhead formation or remove all seedheads formed before they have had an opportunity to shed pollen and produce fertile viable seed. Our firm maintains small plot areas, almost in putting green condition, for a constant source of pure foundation material. Each year a small quantity is taken to plant an increase row to provide plant material to be used the following year for planting the production areas. The increase rows are given extremely close attention and extra care.

Relatively Inexpensive
An investment in a putting green at today’s labor costs makes it unwise to take a chance of having less than the finest turf. The cost of course construction has increased tremendously in the last 40 years. Bentgrass stolons used in putting green construction in the 1920’s frequently accounted for as much as fifty per cent of the total construction cost. At today’s prices the cost of the finest stolons is relatively negligible — about five per cent of the total cost of the green. Properly constructed and maintained greens can be expected to last 30 years or longer. In addition to better playing conditions, quality turf of uniform texture

The first was 31 miles from the Kinzua course; the second 51 miles away; and the third 33 miles distant. The court held that the testimony was admissible, saying: “In our opinion the alleged comparable course sales were sufficiently similar and proximate in time to be useful in reflecting the fair market value of the condemned golf course. Further, we believe that insofar as proximity of location is concerned, a court should exercise its discretion in accordance with exigencies of a case, and if land is not of a character commonly bought and sold, should allow evidence of the sales of similar land located at some distance from the land taken.”

The motion for a new trial was denied and the $97,000 award was allowed to stand without change. United States v. 84.4 Acres of Land, Etc., 224 F. Supp. 1017.)
3 Ways You Win

WITH ConVoy GOLF CARTS
RENTAL CARTS
ACCESSORIES

1 ConVoy GOLF CARTS
now priced to sell as low as $19.95!

Smart new styling, a brand new $19.95 model, ConVoy’s famous features, a great sales producing national promotion with tie-in aids for you—add up to YOUR BIGGEST PROFIT YEAR WITH CONVOY!

Offer your customers greater value when you sell the best ConVoy carts ever built! Exclusive construction features improve performance. Simplified design eliminates main causes of breakage and wear.

Get set for a full season of profit with ConVoy! Contact your distributor or distributor salesman today.

2 ConVoy RENTAL CARTS
pay for themselves the first season! From then on, the profit is all yours! ConVoy rentals earn more for you because they’re especially designed to last longer, require few or no repairs even after many years. No parts to lose. Removable handle and non-folding wheels discourage theft. Free theft insurance included! Write today for booklet describing rental plans used by many clubs.

3 ConVoy ACCESSORIES
Earn extra profits with ConVoy POCKET-SAVER. Holds practically everything—fits any cart. It won’t bend or break because it’s die-cast. Retails for only $1.95. It’s just one of several ConVoy accessories that sell without help—guarantee extra income for you.

**Grau's Answers**

(Continued from page 70)

"framework" or "skeleton" that hold the nitrogen in a soluble form ready to go into solution and to feed the plant. Without the framework you would have 100-0-0 which is elemental gaseous nitrogen, almost completely useless to your turf. Efficiency would be a fraction of one per cent. Cost would be astronomical. You would have great difficulty in applying it to your turf.

Now let's look at 38-0-0, the familiar insoluble ureaform that you are using. The N content is higher but it is still a long way from the 100-0-0 you speak of. This material has no filler. It, too, must have a skeleton to carry the N in a slow-release form just as your body must have a skeleton.

Unlike the simple inorganic soluble molecule of sulfate of ammonia, ureaform is a mixture of complex molecules of various sizes. All ureaform molecules are made up of hydrogen, carbon, oxygen and nitrogen. The carbon, hydrogen and oxygen are all a part of the framework. Carbon furnishes energy to microorganisms that release N from the molecule. Oxygen is essential to the life and health of the soil microflora. Hydrogen enters into base exchange to release other nutrient elements to the plants.

Thus, you see, every part of the ureaform molecule is useful. A simple molecule might be shown thus:

\[
\begin{align*}
H_2C & \rightarrow \text{NH-CO-NH}_2 \\
\end{align*}
\]

From here they become increasingly complex.

The case of the natural organic, 5.5-4.0, follows the same general pattern but is not so easily explained because it is a variable accumulated by-product of a mixture of materials that have been used before for other purposes. The nitrogen is carried in a framework of lignins, cellulose, waxes, inorganic salts, and organic colloids, all of which act more or less as a framework for the nitrogen. Many of the soluble materials have been carried away in the water processing.

Fillers sometimes are used to make up a mixed fertilizer to equal a ton. More generally these are called "conditioners" which help the physical nature of the blend. Single ingredients as we have discussed never contain fillers or conditioners. The nitrogen is carried in an essential molecular skeleton or framework.

Swinging Around Golf

(Continued from page 24)
decided in court whether Florham Park’s
new ordinance will affect the existing
lighted Par-3 at the club.

The proposed construction of a $400,-
000 municipal country club in Fridley,
Minn., has received the support of the
town’s planning commission and its parks
and playgrounds subcommittee . . . East
Brunswick County, N.J., has approved
purchase of 112 acres for course develop-
ment . . . Still to be acquired are 100 acres
for the proposed 350-acre project.

George Fazio, well-known Pa. course
developer, is seeking a zoning okay for a
new course in Paoli, Pa. . . . York County,
Pa., plans to open two new courses on
Memorial Day — 9-holes in Yocumtown
and 18 near Stewartstown . . . Sixty acres
have been purchased by the town of
Stockton, Ill., and local support is being
sought for course development . . .
Corunna Hills course and clubhouse have
opened ahead of schedule in Owesso,
Mich. . . . Bloomington, Minn., has the
land but starting date for new course has
not been set.

Rockford, Ill., sees a need for at least
four more 18-hole courses by 1985 and is
beginning long-range land purchase plans
to meet this need . . . Nine-hole island
layout in Haverhill, Mass., has lain idle
since 1936 flood forced its last owners,
the Jewish Community of Haverhill, to
abandon the site . . . According to Sports-
writer, Walt Ryan, modern flood control
has kept the old course from further dam-
