flock of competent assistants now holding their own jobs. Current treasurer, Bill Clarke, Hillendale CC, Phoenix, Md., is likely to replace Orlick as treasurer.

New Lago Mar CC, Ft. Lauderdale, Fla., has a new pro. He is Larry Hurst from Cavalier Yacht & CC, Virginia Beach, Va. . . Bill Kelly, Albuquerque, has been appointed executive secretary PGA Southwest section . . . George Berry, now pro at East Lake CC, Atlanta, Ga., is replacing Paul Bondeson who went back to touring. Berry was at Saugahatchee CC, Auburn, Ga.

Howard Everett is manager of the new Jupiter Hills Club, on the dunes north of Jupiter, Fla. The club is a George Fazio design that pretty fair judges are saying is among the genuinely great courses in the South . . . Praise is also being given to the course Art Wall designed for Pocono Farms CC, Tobyhanna, Pa.

Ed Oldfield from Glenview CC, Golf, Ill., has a job this winter as pro at Scottsdale (Ariz.) Inn & CC. Scottsdale is open year-round, but with summer temperatures around 100 degrees in the Phoenix-Scottsdale area, a small staff can handle the folks well. People are easy to get along with in that hot, dry air . . . Amazing how many clubs in Florida and the Southwest that used to shut down in summer now operate the year-round. Golf cars, air-conditioned clubhouses, good course maintenance and competent staffs are the reasons.

Course equipment dealers are lamenting that all the time, travel, shipping and entertainment expenses that salesmen, mechanics and executives have to spend at manufacturers’ meetings, at national and area meetings and at demonstrations have cut dealers’ profits down to zero. Furthermore, dealers assert that over-doing the shotgun type of sales solicitation is curtailing the capacity of a valuable staff of specialists to give intensive demonstrations and sales stories fitted to the needs of the potential buyer.

Several course equipment and supply dealers whose money, management and intimacy with course superintendents and buyers of turf equipment have made the turf machinery business immense, are alarmed about the high and mounting costs of exhibiting and selling. Several large dealers, representing competing manufacturers, have suggested that manufacturers who want dealers’ salesman to attend company annual meetings, coordinate times and places of such meetings. Or can the selling prices of equipment be boosted to cover big costs of travel expenses?

Talk about being famous in golf—when Tom Lundy retired from Greenville (Miss.) G&CC after 42 years as pro, the tributes of the entire community voiced at a testimonial banquet and in news stories ranked him as one of the most valuable citizens a city could have. It’s genuine fame to have that tribute paid for public service. Tom was succeeded as pro by former assistant Bob Langley.

(Continued from page 21)

summer commented on an increase in the sale of the specialty irons, among them the Scrambler, a sort of flange-soled jigger that Eddie Rankin developed for the PGA line; the Tommy iron, a short-shafted, run-up club with about a 7-iron loft that the late Tommy Armour used effectively before greens were sponge-wet; and Wilson’s Chippers that have been sleeping in specialty club displays.

Pros have been noticing the reappearance of approaching clubs that haven’t been seen much in recent years in the bags of veteran members. Maybe the make-up of the 14-club set is changing for the veteran golfer, who constitutes most of the market.

New Golf and Racquet Club, Palm Beach, Fla., has Jay Hebert as its pro, and members are lucky. Jay is a fellow with a lot of golf knowledge and the brains and character to provide what a fine club needs. David R. Jacobson is executive director of the new club . . . Paul Runyan, professional at Sahalee CC, Redmond, Wash., adds Al Semrad, winner of this year’s Intermountain Amateur to his staff. This lad is fortunate in joining Runyan, a veteran and one of golf’s most progressive teachers.

Another genuine expert with the title of director of golf, is Errie Ball now at John’s Island Club, Vero Beach, Fla. Errie was pro at Oak Park (Ill.) for 25 years, often a contender in the PGA Senior’s Championship and a great grandson of John Ball who won the British Amateur championship eight times between 1888 and 1912 and in 1890 was the first amateur to win the British Open. Pete Dye and Jack Nicklaus designed the first of the two 18 holes at John’s Island.

Crockett Springs CC is being built in Nashville, Tenn., by a group including Frank Rogers, Mason Rudolph and Glen Campbell. Bob von Hagge and Bruce Devlin are designing the club . . . Robert Trent Jones will build a 36-hole course at Port Aquarius, the new resort on 1,100 acres at Logan Martin Lake, near Birmingham, Ala.
Now Warren brings you

Warren's® A-20
Bluegrass

The ideal grass for tees, approaches and collars. Takes short cut. Grows upright, gives better support to ball. Resistant to leaf spot, mildew, rust and stripe smut. Develops less thatch. Greens up earlier, stays green later.

Golf courses from coast to coast for years have planted Warren's Creeping Bent stolons for the finest greens in America. Clean, pure strain Warren's stolons provide perfect, even texture and color. Greens planted with seed do not hold their uniformity of color and texture as well as greens planted with stolons.

And Warren research has now made available the new grass, A-20, with the same high quality, for tees and aprons of greens. A-20 has been tested and rated excellent or superior by leading universities.

by Fred V. Grau

Answers to Turf Questions

National unity: a necessary goal

During the last 12 months I have participated in several national and international turfgrass affairs from coast to coast and border to border. In every encounter I have seen the urgent need and the search for leadership.

Turfgrass interests in America lack unity. Golf courses look for guidance to: 1) the Club Managers Assn. of America, 2) the Golf Course Superintendents Assn. of America, 3) the United States Golf Assn. Green Section, 4) golf course architects, 5) extension agronomists, 6) consultants and 7) university specialists. Athletic field interests, having partially lost faith in living turf, have turned more and more to artificial material. Lawn owners fall victim to commercial claims. I have an imperfect idea where all the other turfgrass people go to get information about their particular problems. Somewhere.

And Warren research has now made available the new grass, A-20, with the same high quality, for tees and aprons of greens. A-20 has been tested and rated excellent or superior by leading universities.

Write for specific information about A-20 Bluegrass and Warren's stolons.
CONSIDER IT AS AN INVESTMENT, NOT AS A DECORATION FOR YOUR BATTERY CHARGER

A golf car is to make money with. Not spend money on. And since most claim to have handsome, rugged bodies, comfortable rides and attractive warranties, your investment decision should be based on one thing. Dollars. Pargo will go at least 72 holes on a single charge. Day after day after day. So instead of charging batteries, you're charging rent. Isn't that what golf cars are all about? Call or write Columbia Car Corporation, Post Office Box 5544, Charlotte, North Carolina 28205 704/596-6550 Pargo

You can buy any of 9 Royer shredders for your course

WE RECOMMEND THIS ONE.

It’s called The Superintendent.

It’s expressly designed to handle all soil processing jobs on your course the way you want them handled . . . economically and effectively, day in and day out.

It produces about 15 cu. yds./hr. . . is big enough to be a real work saver on good sized projects such as extending tees and greens or maintaining a turf nursery.

Yet, it’s compact and highly mobile for the production of quick soil mixes on the spot. Great for preparation of top dressing, too.

Like all Royer Shredders, The Superintendent is more than just a soil shredder. It’s a complete soil processing unit that shreds, mixes and blends, aerates and cleans in one operation.

A Royer is the right shredder anytime . . . and the right Royer for a golf course is The Superintendent. Check all the reasons why by writing for our new booklet, “Golf Course Superintendent’s Guide to the Use of Royer Equipment.”

Grau

(Continued from page 24)

your crabgrass mowed and very short, fertilize it and keep it well watered and pretend that it is the ideal fairway grass, at least until late fall when your top-level management decides that you have been trying to tell them something; 2) start cutting 8 to 10 pounds of tall fescue per thousand square feet into your crabgrass fairways with a modern scarifier-seeder. This is best done in August when the weather is hot. This is the time that tall fescue germinates best and becomes established before winter. Later seedings may only partially survive the winter.

Under your conditions, the second choice has the chance to provide the fairway turf desired by your members even under a “pinch-penny” budget. Provide six pounds of N a year (per 1,000 square feet), irrigate seldom, keep mowers sharp. I’ve seen crabgrass choke a good turf of tall fescue.

In search of arbitration

Q—In spite of extensive research, many conferences, after-hours discussions and shall we say arguments, we still seem to have wide differences about soil texture, sand sizes, drainage and other features. We can’t seem to agree on how best to grow perfect turf. Is there a board of arbitration? Is there a final judgment? How can these differences be resolved? (Oklahoma)

A—Let me assure you, you have not reached that point of final judgment. To many, unfortunately, “sand” is still “sand,” even though one sample contains 10 per cent clay; the other 0.5 per cent clay, even though both screen out the same.

The best solution that I can see for the future is: 1) more research, 2) regional conferences of scientists to iron out the discrepancies and 3) more study and awareness of current data by architects, builders and superintendents. There seems to be a lack of understanding of the data that has been presented by scientific research. In some cases the deficiency has been interpretation of data. Let’s face it, we still have a long way to go.
The only work car as good as our golf cars.

And you know how good that is. You see more and more Harley-Davidson golf cars on America's top courses. We build Utilicars with the same care, the same idea that only "perfect" will do. The same way we've been putting power on wheels for over 66 years. That's why they're such hard-working, long-lasting cars. So economical to own and operate.

And why they're so widely accepted for industrial uses. Choose from six body styles, cabs and other options to match your jobs. Choose gasoline power with simple, reliable automatic transmission plus instant-ignition starting that ends wasteful idling. Or choose electric drive that works far longer between charges, prolongs battery life. Get a demonstration today from your Harley-Davidson dealer... the place to go for fast, dependable service, too. Or write: Manager, Commercial Car Division, Harley-Davidson Motor Co., Inc., 3700 West Juneau Avenue, Milwaukee, Wisconsin 53201.

Harley-Davidson
Ford low center-of-gravity tractors pull their weight—without throwing their weight around.

That's because we spread tractor weight over all four wheels. Optional low-pressure "jumbo" tires spread weight even more. And we give you a low center-of-gravity just 21\(\frac{3}{4}\) inches above ground. The advantage? You hold your ground, even on steep slopes. Without trampling everything in sight.

Choose the power you need in two LCG models—Ford 2110 offers 32 PTO hp, Ford 4110 delivers over 52 PTO hp.

Transmissions? Choose from 4-speed on the Ford 2110, dual-range 8-speed or power-shift 10-speed on both models. Choose live or independent PTO.

Hook up your choice of mowing attachments with Ford's versatile 3-point hitch and available PTO options. For mowing rough areas, choose 5, 6 or 7-foot flail mowers. Rotary mowers are available in 60, 72, 84 and 100-inch widths. For fairway mowing, cut a swath up to 21 feet wide with 5, 7 and 9-gang reel mowers.

So tread lightly with the tractors mowing men prefer.

Ground-hugging Ford 2110 and 4110 LCG's!

Controlling bluegrass during bermudagrass overseeding

The influence of five herbicides in controlling annual bluegrass during the overseeding of bermudagrass greens with cool season turfgrass species was investigated. The residual effect of the herbicides on the overseeded cool season grasses and the subsequent spring transition from cool season to warm season turfgrass species was evaluated also.

In the first phase of experiments, bensulide and DCPA gave good control of annual bluegrass in newly-prepared soil with minimal injury to the Italian ryegrass or Pennlawn red fescue seeded one month after application of the herbicide. Diphenamid gave excellent control of annual bluegrass but did not have adequate selectivity to the cool season turfgrasses. Dichlobenil failed to give effective annual bluegrass control when applied to the soil surface during the warm temperature period of August.

Now you can have cool season control of hard-to-kill weeds as well as warm temperature control of a wide variety of 2,4-D resistant weeds.

“Trimec” turf herbicide is a patented combination of herbicides that display “Synergism” and controls hard to kill weeds at lower rates than normally needed with the individual herbicides you’re now using.

Gordon’s Fairway Broadleaf Herbicide with “Trimec” comes as “good news” to all turf specialists. “Trimec” is in a class all by itself. It does what it claims to do. That’s the difference.

Call 913/342-8780 today, or write Gordon’s about new “Trimec” Fairway Broadleaf Herbicide and other Gordon Turf care products.

“TRIMEC”
TURF HERBICIDE MAKES THE DIFFERENCE!
BIG PERFORMANCE ON FORMAL TURF

The Jacobsen Turf King 84 is a versatile, all-purpose mower for fine turf. Variable forward speed plus reverse allows you to do much of the close work and trimming you are now doing with a walking mower. It has high frequency, constant speed reels and will put a fine, smooth finish on up to 20 acres per 8 hour day. The three power-driven reels hug uneven, rolling ground. Also in 76" width. Grass catchers are optional.
