NORTHERN GOLF COMPANY announces TNT model woods and irons with toe and heel weighting that is individually added at heel and toe with specially designed brass plugs. Heads are precision faced with laminated maple and the finish is ebony black. TNT irons are produced in 18-8 austenitic steel by the lost wax process. Precise relieving in the center of clubhead provides correct weight distribution and maintains strength. TNT model clubs are available with graphite, Microlite 400 stainless steel, lightweight chrome steel and dynamic steel shafts.

The National Club Assn. expanded its legislative, legal and tax service to the private club industry and elected new officers and directors at its 12th annual meeting in Honolulu, Hawaii, February 11-13.

In expanding service, the association will increase the frequency of its information services, which totaled more than 30 publications last year, add more contacts in Congress and in government agencies to its present resources and begin a new effort to aid clubs at the state level, particularly in the area of taxation. The first product of this level of activity will be NCA's 50 State Property Tax Analysis.

The association also established a precedent when it re-elected Cyril F. Brinkfield to a third term as president. Brinkfield, an attorney in Washington, D.C., was twice president of the Bethesda CC, is a former president of the Federal Bar Assn., is currently legislative counsel for the National Retired Teacher's Assn. and the American Assn. of Retired Persons and is a trustee of the Suburban Hospital in metropolitan Washington.

Brinkfield has been closely associated with the legislative process in Washington for nearly 20 years, having served as counsel to the House Judiciary Committee for 10 years and then as Deputy Administrator of the Veterans Administration prior to his return to private practice.

Elected as vice presidents of NCA were Joseph J. Donoghue, general manager of Losantiville CC, and Milton E. Meyer Jr., secretary of Pinehurst CC.

Secretary of the association will be Judge James J. Clynes Jr., president of the Country Club of Ithaca, N.Y.; treasurer is Louis L. Szep, general manager of the Oklahoma City G & CC.

The following are newly elected directors for a term of three years: Frank G. Hathaway, past president of NCA, secretary-treasurer of NCA, president of the Los Angeles Athletic Club; Herbert L. Emanuelson Jr., a yale graduate and practicing attorney in New Haven, Conn.; E. Guenter Skole, general manager of the Cosmos Club, Washington, D.C., and a former director of the Club Managers Assn. of America; Louis L. Szep; Don A. Rossi, executive director of the National Golf Foundation, from Rolling Green CC, Arlington, Ill.; James E. McLoughlin, executive director Metropolitan Golf Assn. and a member of Whippoorwill Club, Armonk, N.Y.; Morris A. Cox, past president of the California GC, San Francisco, president of the Peninsula Hospital and the Rotary Club. Newly-elected directors for a one-year term are: Sam Dunham, former director NCA, from Salt Lake City, manager of the Ambassador Athletic Club and Houston White, attorney from Los Angeles, vice president of the Bank of California, past president and a director of the University Club of Los Angeles.
GRAU from page 14

a concern, too. Do you know of any way that the dust can be reduced short of eliminating liming?

(Pennsylvania)

A—Superintendents who have hydraulic applicators (hydro-mulchers, hydro-seeders, hydro-grassers) have the problem licked, especially for putting greens and tees. In water suspension there is no dust. For 50 to 70 acres of fairways hydraulic spreading is a bit impractical and this is the area where dust is a big problem.

Very recently, I have received a sample of finely-pulverized limestone that has been pelleted into firm granules. This product is virtually dust free and can be spread with conventional gravity feed spreaders or with spinner type spreaders. The granules can be crushed with firm pressure from one’s fingers. Dropped into water, the pellets quickly disperse and spread out in the familiar appearance of finely pulverized limestone.

One advantage of granules is that they roll off blades of grass. When moisture is supplied (rain or irrigation), they dissolve (they really disintegrate) and settle down to the job that lime is designed to do—without dust. You can expect the cost to be somewhat higher than conventional limestone.

In naming the company that designed and manufactures this pelleted lime (known as Granulime), I assume no responsibility for the product. I would prefer that Paul Perrine, president, answer the inquiries, rather than I. The company is Calcium Products Corp., P.O. Box 270, Aurora, Ind. 47001. The mine and plant are near Irvington, Ky.

No information has been given to me about Ca and Mg contents nor about the fineness (screen test) of the limestone prior to the granulating process.

This question and answer has been prepared to acquaint GOLFDOM’s readers with another step in progress toward refined management of turfgrass areas. It implies no recommendation for use or endorsement of the product. Those readers who are interested are asked to correspond directly with Paul Perrine.

JET FUEL DAMAGE

Q—Everyday there are 20 to 25 big jets that fly over my golf course in their landing pattern. I can see fuel being dumped as they approach the runway. The greens that lay beneath this approach pattern give me more trouble than all the others. Is there a connection?

(Maryland)

A—There is a first time for everything and this is the first I’ve heard of possible trouble from dumped jet fuel. I don’t know the answer, but I’ll work with you to find the answer. I wonder if other clubs near big airports have had any similar experiences.

NATURE’S BOUNTY

Q—We have many, many plants of pokweed (Phytolacca americana) springing up all around our golf course, especially where the soil has been disturbed and organic materials have been placed for disposal. What is a good way to get rid of them?

(Virginia)

A—Eat them! Boiled pokweed greens are a delicacy superior to spinach. Poke is similar to asparagus. All you have to do is gather it, cook and eat it. You can freeze it for winter eating. But don’t eat the purple berries. When pokweed grows tall and the leaves are old and inedible, one can use the fleshy roots. If anyone wants to pursue the subject I will accept letters and answer all of them in the future. I cannot answer individual letters.

PRESIDENTS from page 29

ing potential; 54 per cent indicated that their clubs have been refusing outside business because of the guideline. Twenty-five per cent of the presidents of member-owned facilities said their clubs have considered giving up their non-profit exemption to secure more non-member income. On first consideration, this figure does not seem great. However, on further consideration, it is considerable when viewed in light of the very advantageous tax status that would be lost. Therefore, these clubs must feel that the potential income that could be derived from outside business, even after taxes, would far outweigh any savings via an exemption.

WOMEN (from page 56)

This was the year in which she did it for two years. "I was all alone, employed by Wilson, given a small salary and allowed to pocket money, my expenses and a royalty on the equipment sold that bore my name. It was the most enjoyable job in the world and for a short while I was the only one who had it. What a heady feeling. During those years we would play for the sport of it, for the social life it offered and for whatever glory we could get in participating. I remember well those exhibitions for charity with Bob Jones, Henry Cotton and Gene Sarazen. But now girls are playing for over a million dollars. Wow!"

Take a look at how they are scoring. Wow again!

Last year Kathy Whitworth averaged 72.38 for 84 rounds of competitive golf! Other leaders were Sandra Haynie, 72.93 for 68 rounds; Jane Blalock, 73.41 for 80 rounds; Mickey Wright, 74.00 for 27 rounds; Donna Caponi (Young), 75.46 for 64 rounds; Sandra Palmer, 73.32 for 84 rounds and Jo Ann Prentice, 73.94 for 84 rounds.

If a man played as well, his handicap would be scratch and he just might be representing his country in the Walker Cup matches or get an invitation to play in the Masters, not to mention a few dozen member-guests around the country. If he remained an amateur, that is.

In just about every area of golf, women have arrived. And they are here to stay.

CONTROL MOST TURF DISEASES THROUGHOUT THE GROWING SEASON!

WITH ONE MALLINCKRODT BROAD-SPECTRUM FUNGICIDE!

SPRING
Apply 3 oz. KROMAD per 1000 sq. ft. weekly. Controls most spring fungus diseases including dollar spot and leaf spots. For “resistant” dollar spot, use TOBAZ® (separately—don’t mix with KROMAD) at 2 oz. rate.

SUMMER
Apply 3 oz. KROMAD per 1000 sq. ft. weekly. Controls brown patch, dollar spot, copper spot, red thread and the leaf spots. In severe brown patch weather, add ½ oz. CALO-CLOR® in tank-mix or TOBAZ (separate application) at the 2 oz. rate. If pythium threatens, apply KOBAN® (separate application) at 4 oz. rate. For “resistant” dollar spot, apply TOBAZ (separately) at 2 oz. rate.

AUTUMN
Apply 3 oz. KROMAD per 1000 sq. ft. weekly. Controls most fall diseases including dollar spot, copper spot, red thread and leaf spots. For “resistant” dollar spot, use TOBAZ (separate application) at 2 oz. rate.

For winter turf improvement and protection, see your Mallinckrodt distributor for the finest snow mold control chemicals.

Your distributor has KROMAD folders with this complete program...ask him for yours!
