RYAN TURF EQUIPMENT introduces a core processor that company officials maintain can save time and labor costs in aerating golf course greens. According to the company, the self-powered core processor implement is coupled to and operated simultaneously with Ryan’s Greensaire II aerator. The company says the processor eliminates extra time and manpower previously needed to collect cores, process them, separate thatch from soil, spread as top dressing and work soil particles into the turf. A conveyor begins the process by catching cores and pushing them up a ramp where small soil particles drop through perforations onto the green. A trailing dragmat works soil particles into the turf and any retained soil or plants are discharged into a perforated trough. Then, a horizontal rotary brush forces remaining soil through the trough and particles drop to the green in front of the dragmat.

WESTERN DRINKING FOUNTAINS introduces a new lightweight drinking fountain. Made of polyester and stone; the Model 7 is a wall-mounted unit and weighs only 30 pounds. The polyester and stone fountain is polished to a smooth finish. It is generally furnished in gray, green, charcoal, beige or white, but nearly any color can be matched with this new, lightweight material. The fountain is equipped with a chrome-plated push button bubbler, which is locked to receptor with vandal-resistant lugs. It comes with automatic stream regulation and integral waste strainer and one-half i.p.s. supply.

LOCKE MFG. DIV. of Stellar Industries, Inc., presents the new Maxi II, available in two models; one with a 10 hp engine, which carries a suggested list price of $2,145, and a second incorporating a 12 hp engine with a suggested list price of $2,175. Although both machines are expected to earn widespread acceptance among commercial contractors and other traditional Locke markets, the greatest application is expected in the golf course maintenance field for use on aprons and tees. With these 30 inch cutting reels, the Maxi II offers an 87 inch mowing width and the ability to handle up to 3 1/2 acres per hour at speeds up to four miles an hour. Transport speed is up to six miles per hour.

TAYLOR-DUNN has added a new model to its line of Tee Bird Golf Cars. New styling and soft “Glide-Ride” are features, as well as cradle bag rack, durable diamond plate exterior and optional fiberglass top.
more than 1 per cent, but that 1 per cent must be there or it's no deal.

Huntley's side-bar (see page 23) is an example of a use permit being issued and a subsequent land exchange.

Despite the several legal conditions, vicissitudes of market and administrative inclination, which must be surmounted to qualify an investor for the granting of a commercial use permit for golf course development, GOLFDOM is convinced that this alternative to buying land is a feasible and worthwhile process, unless the availability of funds is not important to an investor.

We have tried to anticipate the reader's questions and forebodings on this subject, but if we have inadvertently left any loose ends we welcome reader inquiries.

HUNTLEY from page 23

are being installed to meet the Service's ecological standards, which made sense. At the end of each year, we shall determine the total receipts for that particular lift, multiply by the percentage of the lift on Forest Service land, and multiply again by the agreed percentage of the gross.

The Forest Service, out here in the West, has pursued a general policy of limiting its leases to 80 acres. That is usually ample for a ski resort and the attached amenities, such as hotels, hostels, restaurants, shops, and so on. In its concern for the basic resource—the land—the U.S. Forest Service takes the enlightened attitude that a ski resort is of no permanent danger to the land and represents only a minute, temporary threat to the ecology. The same attitude, very likely, would prevail for a golf course.

But the Forest Service would probably take a dim view toward leasing land for a golf course in these Northern Rocky Mountain areas. Its first question would be, "How many people will use this proposed course?" And quite likely the agency would conclude that the acreage would, in the long run, serve more people, better, if it were employed as a habitat for wild life, a camp ground for recreational vehicles or as a source of supply for the lumber industry.

As golfers petition the U.S. Forest Service for lease permits to design and build new courses, the agency will certainly be a good listener. For a government bureaucracy—which it undeniably is—it will respond to the numbers . . . the numbers of people who might evidence an interest in playing golf on public land.

But a warning. In proposing that few golf courses be located on Forest Service land, the golfer will find himself assailed and slandered by the arrogant and extremist self-styled "ecologists." We are all a bit stupid and remiss for permitting them to parade with that word "ecologists." They are something else. They belong with the alarmists who predict earthquakes and the end of the world, those who call up tidal waves and who are constantly observing "Unidentified Flying Objects." In our new and admirable concern for the environment of our country these egocentrics were standing "at the head of the line," and it is they who represent the clearest danger to the U.S. Forest Service. By every device, from outright slander to the use of phony petitions and fictitious organizations, they seek to destroy the public confidence in the Forest Service and eliminate the agency. These extremists must be kept out "in the rough" and at least a mashie shot away from the decision-making processes regarding the use of our public lands.

A great new team. You and U.S. Golf's Investment cast Irons featuring De Torque

a new innovation in golf club design and engineering.
Confidence and a relaxed state of mind are vital conditions in golf. U.S. Golf irons can consistently provide this crucial edge.

All U.S. Golf Irons feature De Torque, a dynamic principle of physics which eliminates shaft vibrations making bad hits virtually impossible. Investment cast from the finest quality premium stainless steel, to provide true weight and balance and an enlarged "sweet spot" area. Accuracy and consistency make these U.S. Golf Irons unique.

Custom tailoring provides every golfer with the proper fit at no additional cost. And dependable delivery. Normally 3 to 4 weeks on custom tailored orders through your pro shop.

Utility clubs are available in 6, 7 and 8 woods and 1 iron, sand wedge, pincher and chipper.

Tri-City Golf Company also features the Pro-Am Golf shirt in 6 styles and a variety of fabrics as well as Pro-Am gloves in 2 styles for both men and women in English Cabretta and genuine leather.

Golf pro shops only write for color catalog and custom ordering forms
