on the tour!

An ever-increasing number of fine tournament Golfers are discovering the superior tournament play qualities of my APEX Series Ball.

The APEX Ball gives consistently longer distance because of its high coefficient of restitution. In addition to this superior rebound characteristic, it has tight dispersion patterns and performs virtually identically from shot to shot.

The touring professional's success depends on this kind of reliable performance . . .

And, you can depend on it too!

Ben Hogan
Neither wind, nor sand, nor heat...

can keep the Otis from its appointed rounds.

Finding a golf car that will operate perfectly under harsh conditions is a tough job. So, to make your job easier, Otis has developed the most rugged, powerful, safe and dependable car you'd ever want.

The Otis body is vacuum molded of high-impact Cycolac®, the individual seats are all-weather vinyl with the driver's side easily adjustable. Combine this with a heavy-duty, 2 hp electric motor, 6 heavy-duty 220 amp batteries, hypoid drive train, and a combination spring/shock absorber suspension system and you've got hushed power, passenger comfort and all-day dependability.

Standard four-wheel stability, automotive type steering, drum-type brakes, and a low center-of-gravity help make the Otis the safest car to ever ford a dry gulch.

For the details on how to bring your golfers out of the rough, contact our factory and we'll have one of our brochures in your hands before the dust settles in this photo.

It's never too hot to aerate when you have Ryan spikers

Regular aeration is a must to keep all turf areas healthy. During hot, dry months the safest way is to aerate the troubled turf with Ryan spikers.

The Spikeaire (1) is designed for spiking greens and other fine turf areas. It's self-propelled and provides a deep, clean spiking action.

Spiking relieves compaction, allows nourishing air and water to get to root zone (helps decompose thatch, too). A spring-loaded turf-guard prevents lifting of shallow-rooted turf. 5,000 sq. ft. of turf can be spiked in about 15 minutes.

Rugged Tracaire (2) (or Reno-vaire — not shown) is just the machine for spiking fairways and other large turf areas. High, dry spots are quickly spiked to allow moisture and air to penetrate to root zone. Relieves compaction fast. Coring and renovating tines are also available for both units.

When things get hot, spike with Ryan!

Proof that Philadelphia custom spikeproof carpet is a real pro

Ten is only the beginning. This is the largest club of its kind. More N-282 woven Wilton is installed than any other country club carpet. In almost every case, 10 years and more of spikes, mud and beverage spills have not appreciably lessened the carpet's freshness and luxury. Fully customized, with your emblem, initials or special design woven in. Or select from our extensive library of club designs. All in colors of your choice. No price premium on medium size orders.

JOIN OUR 1983 10-YR. CLUB. SEND COUPON FOR FREE CARPET SAMPLE.

INTERNAL ORGANIZATION VITAL TO CLUBS

A recent article in GOLFDOM drew attention to the two basic problems facing the governing bodies of clubs today: efficient operation and expenses. In many respects both problems are one and the same. The ways in which a club deals with them can make or break it.

This writer has watched clubs operate for nearly 20 years. It would be fair to say that changes within the industry are, at this point, most encouraging. The worry is that far too few clubs are adapting to the changing times.

Nowhere is this rigidity more evident than in the internal organizations of many clubs. All too frequently, a club’s board of directors will think of the golf professional as a playing companion, the superintendent as a grass grower and the club manager as a maître d’. These men serve these specific functions, but they do much more as well, and I would like to heartily endorse the conclusions drawn in the article, “Presidents and Owners: How Do They Run Their Clubs?” in the April issue of GOLFDOM.

Today’s professional staff should be just that, professional. As professionals, they should be the operating team of the club, carrying out the policies established by the board of directors. Once those policies are established, the professional staff should have full decision-making authority within the guidelines set by the board.

Providing the club selection committee did its job when the professional staff was hired, that staff should represent the continuity of authority within the club. The staff should, in fact, be far more qualified to run the club than any single member, regardless of his occupation. If they are not, then the fault probably lies with the club.

The case cited in which one club had had 20 managers in 20 years would seem to be inexcusable. That some of the managers were unqualified for the work for which they were hired reflects more on the selection committee than it does on any individual manager. One wonders who was checking references.

More often than not, the professional staff are probably college graduates and have degrees in their respective work specialties. Where this is not true, they certainly should have been participants in the continuing education programs offered by their professional associations.

Nowhere is this more true than in the case of the golf course superintendent. Today’s superintendent probably has a degree in agronomy from one of the fine state schools specializing in this field; he keeps abreast of the latest developments in his specialty through regular contacts with his association, the Golf Course Superintendents Assn. of America, and through the seminars at its annual conference. His knowledge must span the fields of chemistry, pesticides, occupational safety, business and budgeting, landscaping, architecture and human relations. Indeed, more than one superintendent has become the general manager of his club.

All three professionals should sit in on board meetings. Many progressive clubs already are making their staff reports a regular part of the monthly agenda; some even include them at meetings of the executive committee.

Again, this writer would like to put in a word for the superintendent. He, most of all, should be included at such meetings.

The golf professional sees almost every golfing member of the club; the club manager is in touch with members whenever they entertain. Because of the nature of his work, the superintendent rarely sees any but the most persistent golfers.

Yet, it is the superintendent who is given responsibility of maintaining the largest and most expensive piece of the club’s property—the golf course. He should at least have as much recognition and contact with members as the rest of the club’s professional staff. Lack of it can be crippling.

As I support the authority of the club’s professional staff, so do I deplore the inferences that the club’s operating committees—green, house and grievance—are a hindrance to an efficient organizational chart.

All committees should be vehicles for member involvement and participation in club activities. Operating committees are no exception.

This is not to say that the criticism is always unjustified. Operating committees should play a supportive role to management by serving as resources to the professional staff. It is only when these committees attempt to usurp the authority of the professional staff that trouble arises.

There are a number of fine descriptions of the responsibilities and limitations of club committees. They all point out that committees advise and consult with the professional staff; they do not interfere with their decision-making responsibilities.

In practice, active involved committees provide a vehicle by which clubs can stimulate membership growth through member participation in club affairs.

In fact, the development of an efficient internal club organization headed by a board of directors that is aware of its policy-making responsibilities and directed by a qualified professional staff probably is the best solution to the second problem: high operating costs.
About golf car availability and profits.

If your club is keeping its golf cars moving, you’re making more money than a club with cars sitting around, waiting for parts and repairs. A golf car can’t earn money for you when it’s not available for rental.

Mr. Golf Car, your Cushman Distributor, knows that. That’s why he sells dependable golf cars to begin with. And provides fast repair service to back them up.

Take parts. Check around your area. Does any other source of golf cars maintain the stock of parts your Cushman Distributor does? Probably not.

Take mechanics. Your Cushman Distributor’s mechanics know the answers. Most are factory trained. That’s what gets your car out of the shop and back on the course... fast.

Take warranties. No other golf car manufacturer guarantees parts and labor for a full year.

The key to profitability in golf car rentals isn’t in the initial cost of the car. It’s in the amount of time your cars spend working for you on the course. And when it comes down to that, you can’t beat the combination of a Cushman golf car and a Cushman Distributor.

Cushman, Outboard Marine Corporation, 1429 Cushman Drive, P.O. Box 82409, Lincoln, Nebraska 68501.
If the weather stays right, Poa annua might

But what if the weather doesn’t cooperate? Poa annua’s a “fair-weather friend” at best. Give it the right combination of temperature and rainfall, and there’s no particular problem. But a few hot dry days later, you’ve suddenly got a patchy looking course... with no quick cure.

The time to solve potential Poa problems is before they happen. And the easy, effective solution is with Balan®, Elanco’s proven pre-emergence product that kills Poa annua seeds as they germinate, gradually reducing the stand while desirable
not be a problem this year

grasses take up the slack. Balan keeps working month after month . . . not only against Poa, but gets rid of crabgrass, goosegrass and foxtail as well.

Ask your Balan distributor salesman to help work out a full-course weed control program. With dependable, economical Balan, you can forget about the "ifs."

Elanco Products Company, a division of Eli Lilly and Company, Dept. E-455, Indianapolis, Indiana 46206, U.S.A.
Hal Vogler and his sowing machine.

Here's a man who wants to put the germination percentages on your side, for a change. He's with the W. F. Miller Co., the Jacobsen Distributor in Birmingham, Michigan. And like the rest of us Jacobsen Distributors, he's got the machine that knows how to give you 70% germination on both overseeding, and in new seed beds. The Jacobsen Model 548-100 Seeder.

The reason it gives such good germination is because it plants the seed, not scatters it. (Broadcast-type seeders give you up to 40% germination. The rest of it often becomes bird seed.) It removes thatch, it aerates and plants the seed, all in one operation. That's triple duty for your investment. (Not only that, if you take off the seeder attachment it will still renovate, thatch, vertical mow, spike and aerate.)

For smaller seeding jobs we've also got the self-propelled Model 524-100. Same top germination results. So if you're looking for rich and lush turf, try seeding with the sowing machine that can put more of your budget dollar where it does the most good. Right where everybody can see it.
