by David J. Slaybaugh, editor

Bill Fitch, coach of the Cleveland Cavaliers professional basketball team, said recently after his team had almost (but not quite) come from behind to win a close game, "We played a good game, with some great individual efforts, but the clock ran out before we could catch up."

One could also say that was the story of the golf business in 1976: not a bad effort overall, with some fine individual performances, but not quite good enough to pull ahead. The results of the 1977 GOLF BUSINESS survey show that although the average course increased its revenue in 1976 in comparison to 1975, the grem- lins of inflation, taxes, increasing costs, and higher wages caused expenditures to cut short any gains that were made.

For example, 69.5 percent of the courses we surveyed reported that revenues were up from 1975, but 74.3 percent reported expenditures were up. Only 2.4 percent of the courses reported a decrease in expenditures, while 11.4 percent experienced a de- cline in revenues. In other words, a majority of golf courses took in more money last year than the year before, but even more of them spent more than they did the previous year. And, a good number of courses took in less, while very few spent less.

The figures we will report on the following pages should tell the story themselves, however, and point out the bright spots as well as the dark.

Basic information

The 1977 GOLF BUSINESS survey actually comprises four parts: a "master" questionnaire, to be filled out by the facility's owner, general manager, or other top brass, plus individual questionnaires to be completed by the club manager, superintendent, and head professional. The data request- ed was, for the sake of accuracy, distributed on the forms so it would be provided by the person responsible for it at that facility.

The "master" questionnaire provided basic information about the more than 500 facilities responding to the survey. Some 46 percent of the facilities responding were private clubs, 31 percent were daily fee courses, 20 percent were municipal operations, and less than 4 percent were resorts. About 35 percent had nine holes of golf, 56 percent had 18 holes, and a little over 9 percent totaled 27 or more holes.

Nearly 37 percent of the courses responding are open for play year-round. The majority (54 percent) are open from 6 to 9 months of the year, while less than 4 percent have a golf season of less than 6 months. About 6 percent are open 10 or 11 months.

The seasonal breakout above follows the geographic distribution of respondents: 36 percent were from the South, Southwest, and Pacific regions where 87, 95, and 81 percent (respectively) of the courses stay open 12 months a year.

An average of 25,818 rounds of golf were played last year at each of the responding facilities (slightly below the 1975 average of 26,385 rounds per facility derived from National Golf Foundation statistics), which created an average gross revenue from green fees of $73,746 per facility. Average green fees reported to us were just over $8 for nine holes and $16 for 18. We do not have comparable data for the previous year, but according to this year's respondents, 42.5 percent of them increased their green fees in the past year and 57.5 percent did not.

A dramatic increase was shown, though, in the data on private clubs, where an 18 percent average increase was reported for both dues and initiation fees. The average club surveyed had 375 members, 285 of whom were golfing members.

The clubs and courses responding on our master questionnaire reported total facility expenditures, on the average, of $115,902. This was offset by average facility revenues of $255,- 775. The average club paid $46,182 in real estate taxes in 1976, although the average in the Midwest was nearly twice that, while the rest of the country averaged less than $20,000.

Aside from food and beverage ser- vice, which will be discussed in detail later, the usual avenues of income, golf car rentals and the pro shop, were taken by more than 80 percent of the courses reporting. Only 11 percent still have caddies, but 47 percent offer club repairs.

Other sports facilities used to attract members and customers by many courses were outdoor swimming pools (33 percent have them) and outdoor tennis courts (30 percent). Only 2 per- cent have indoor swimming; only 1.3 percent, indoor tennis. A few more (1.6 percent) offer platform tennis, one of the most rapidly growing sports in the country. Another 4 percent offer other miscellaneous sports facilities at their golf courses, including such diverse things as fishing, hunting, bowling, boating, and horseback riding.

"A dramatic increase was shown in the data on private clubs, where an 18 percent average increase was reported for both dues and initiation fees."

Golf cars

Some 83 percent of the courses surveyed rent golf cars; 17 percent do not. Of those that do, 63 percent own their own, 32 percent lease them, and 5 percent do both.

About 34 percent of the respond- ents have gasoline-powered golf cars, while 49 percent have electric cars and 17 percent have some of each. The average golf course has a fleet of 44 cars which are, on the average, 4 years old. Average gross revenue from rent- als last year was $40,588, the profit from which usually goes either back into the club or company's coffers or to the owner, general manager, or other top man. At 27 percent of the courses reporting, the pro collects the profits — although he operates the
TOURING PRO® SWEATERS FIGHT INFLATION 4 WAYS.

1 FIRST IN CARDIGANS FOR MEN.
With a choice of two outstanding money-savers: The Touring Pro Carefree Cardigan of 100% "WINTUK" Orion* fine knit (Style #912) and the Touring Pro Top of the Line 100% imported Alpaca (Style #1010).

2 FIRST IN PULLOVERS FOR MEN.
With a choice of two great inflation-fighters: The Touring Pro Carefree Pullover of 100% "WINTUK" Orion* fine knit (Style #280) and Touring Pro Top of the Line 100% imported Alpaca (Style #1012).

3 FIRST IN CARDIGANS FOR WOMEN.
With the "basic buy" Touring Pro Carefree Cardigan of 100% "WINTUK" Orion* fine knit (Style #900).

4 FIRST IN PULLOVERS FOR WOMEN.
With the easy care, light'n lively Carefree Pullover of 100% "WINTUK" Orion* fine knit (Style #281).

Make Touring Pro your basic buy in golf sweaters. They’re first in style, first in quality and first in the hearts of every inflation-fighting golfer.

Circle 115 on free information card
golf car concession at almost 44 percent of the courses.

The data immediately above was reported by the owners and general managers on the master questionnaire. On their own questionnaire, however, the pros told us this: they manage the golf car rentals at 54 percent of the courses; they collect all the profits 25 percent of the time and share the profits 29 percent. Of those pros, the average man receives 27 percent of the profits for an average annual income of $10,756.

Other pro profits
The 311 golf professionals responding to the 1977 GOLF BUSINESS survey reported a variety of management and profit-making responsibilities. About 81 percent of them have a pro shop at their club or course, which they manage themselves in 61 percent of the cases. At 54 percent of the pro shops, the pro collects all of the profits; he shares them at 15 percent of the shops. Presumably, he works for salary at the remaining courses.

Club repairs are done for members or customers at 65 percent of the responding pros' courses. Forty percent of the repair services are managed by the pro himself, and he gets all of the profits at 47 percent; he shares profits at another 14 percent. Lessons are, of course, very popular: offered by 73 percent of the pros and run by 40 percent. Here, 55 percent of the teaching pros keep all the money; only 9 percent share it.

Driving ranges are offered at 54 percent of the pros' courses; 39 percent of the responding pros manage them. A third keep the profits, 10 percent share them.

Exactly half of the pros questioned have an assistant pro. Those responding also manage an additional four full-time and four part-time employees.

Average gross sales per reporting pro shop was $37,989 for 1976 — down very slightly from the previous year. As the table on page 27 shows, there was a minute increase in the average gross sales of woods and irons in pro shops, which barely offset a minute decrease in sales of putters and utility clubs. This resulted in a 1 percent upturn in the overall sales average of golf equipment through pro shops.

Golf ball sales fared somewhat better, though, increasing an average of 6 percent. Sales of golf bags through pro shops were virtually the same as the year before.

Surprisingly, survey results showed a slight decrease in sales of golf shoes and a marked decrease in sales of men's apparel. Women's apparel and golf gloves made small gains, but the overall softgoods picture was not as good as expected after talking to pros during the past few months, especially at the PGA Merchandise Show in January. These figures will have to be watched very closely during the coming year.

Club repairs added an average of $1,860 to the pro shop coffers.

Professional salaries
Quite a few pros collect, or at least share in, the profits from the various

\]
operations they manage at their clubs and courses, but most also collect a salary as part of their income. Of those responding, 34 percent of the pros said they received an annual salary in excess of $10,000; another 34 percent said they receive from $5,000 to $9,999; and 19 percent get less than $5,000. More than 12 percent receive no salary whatsoever, relying entirely on “commissions,” lesson fees, golf winnings, and so on to make a living.

And of those pros whose course is not open year-round, 21 percent find it necessary to work elsewhere during the off-season.

Food/beverage profits
Another big producer of income for golf facilities — even bigger than the pro shop — is the foodservice and beverage sales operation. This, at least, was one bright spot in the profit picture for 1976. The categories of food, liquor, beer, and wine all manifested increases over 1975 figures, as shown in the chart on page 23.

Setting up and operating a club foodservice operation does, of course, require a substantial investment and outlay of money. Aside from the initial cost of the physical facility, improvements must be made periodically to keep it in shape and attractive to members and customers. More than half of the 223 club managers who responded to the GOLF BUSINESS survey made clubhouse improvements last year, averaging $48,500 per club. Half also indicated they planned to make improvements to their clubhouses this year.

Improvements made last year at our respondents’ clubs amounted to an average of $15,000 in the dining room, $19,800 in the snack bar, $7,700 in the bar, $3,700 in the kitchen, and $10,800 in additional miscellaneous areas of the clubhouse.

This year, the club managers said, they plan to improve their clubhouses to the tune of an average $31,400. They will spend an average of $10,000 on the dining room, $7,900 on the bar, $7,000 on the kitchen, and $4,700 on the snack bar.

Over and above the cost of the facility itself is the investment in furnishings and supplies. Responding club managers reported an average inventory value of $59,000 in kitchen equipment alone. Add to that an average of $15,200 invested in dining room furnishings and another $9,600 in linen, china, flatware, and other dining room supplies, and you have a substantial amount of money.

Our club managers indicated that, for those who have them, they could seat an average of 30 people in the bar, 75 persons in the dining room, and 24 in the snack bar. They employed, on the average, three full-time employees in the bar, six in the dining room, two in the snack bar, and four to five in the kitchen — plus an additional three part-time employees in the bar, six in the dining room, three in the snack bar, and three in the kitchen. This resulted in average labor costs in 1976 of $53,700 per facility.

About 32 percent of the club managers said they offer a full dinner menu in the dining room, and 14 percent serve dinner in the bar. A full luncheon menu is available in the dining room at a third of the responding clubs, in the bar at 22 percent, or in the snack bar at 10 percent. Members and customers can order from a sandwich menu in 56 percent of the snack bars, 29 percent of the dining rooms, and 40 percent of the bars.

One can have liquor with his meal in 35 percent of the dining rooms in clubs reporting, wine in 36 percent of them, and beer in 39 percent. Snack bars serve liquor in 15 percent of the cases, wine in 14 percent, and beer in 39 percent. Fifty-five percent of the club bars serve liquor, according to the survey, 61 percent offer beer, and 48 percent have wine available.

The chart on page 23 shows the relative popularity of the various types of liquor in clubs. As you can see, vodka is now the favorite of the largest number of drinkers.

Superintendents spend it
Unlike the golf professional and the club manager, the golf course superintendent does not directly account for any income — only for expenditures. Without him and his care of the facility, however, none of the other, more glamorous, income-producing facets of the golf operation would be possible.

Just how much do superintendents spend? The more than 300 who
This is where Fred Getz found out that the framus is really a reel lapping device.

It's the Jacobsen Turf Care Equipment School at our factory in Racine. And it's the oldest, most complete school of its kind in the United States.

Many users of Jacobsen Turf Care Equipment make it a point to send their service people here. Just to get maintenance training by experts.

It makes a lot of sense because it benefits them in several ways.

First, it enables users (like you) to make more and better repairs right on the spot. It saves sending the equipment out for many repair jobs because you are better trained to handle a greater variety of service problems.

So it can save costly down time when you need to use the equipment most.

Second, the training in preventive maintenance helps your servicemen do a better job of routine maintenance. Which means that your equipment should last longer and run better.

This adds up to interesting savings in capital expenditures over the long haul.

Courses offered include basic and advanced hydraulics, circuitry, parts, electrical components, engines, new equipment, and more.

Besides having the school in Racine, we sponsor field service clinics at locations closer to your operation.

Sound intriguing? For more details, simply contact your local Jacobsen distributor.

He can help you take the framus out of your service problems.
"Cuts my fill-time in half.
And that's money!"

Avery Beck, Pro; Curt Wall, Maintenance Supervisor, Whispering Pines C.C., Whispering Pines, North Carolina.

The Sure-Fill® battery is a real time-saver. Curt Wall of Whispering Pines reports he can fill two Sure-Fill batteries in the same time it takes to fill one conventional battery.

That's because the Sure-Fill battery has just one dial instead of the usual three vent caps. Turn it to "Fill" and all 3 cells get water at the same time. When the dial is full, turn it to "Use" and the vent wells are closed. The patented dial assures that the water level is the same in each cell; that means longer battery life. And corrosion is reduced, too, because gas is vented farther from the terminal posts.

"I really like it," says Avery Beck, "and I wouldn't hesitate to recommend it to others."

Sure-Fill batteries are available in two models: The SF-106 for 106 minutes of continuous running on one charge; and the SF-88 for 88 minutes.

Time savings and longer battery life means money in your pocket, so take the advice of pros who know. Try Exide-Willard Sure-Fill batteries and see why ESB's golf car batteries outsell all others by a mile.

responded to our survey reported average expenditures last year of $77,492. Better than 67 percent of them said their expenditures were up from 1975, and some 27 percent said they spent about the same. Only 5 percent reported spending less in 1976 than in the previous year.

The largest single area of expenditure for superintendents was, not unexpectedly, labor. The average was for 1976 $50,300 per facility, up from $46,200 in 1975. On the average, superintendents employed six full-time and four part-time workers during the golf season, retaining five full-time and two part-time over the winter.

The next largest average expenditure was $14,700 for new and replacement equipment, augmented by another $5,900 for repairs to equipment. The superintendents reported being billed an average $11,300 for water last year.

Only 51 out of 300 superintendents said they bought sod last year, but they paid an average of $10,200 for what they did buy. By comparison, 155 bought grass seed, but spent an average of $4,200 for it. Virtually everyone purchased fertilizer, averaging $5,100 in costs for the year. Respondents spent an additional $4,100 on other chemicals such as herbicides, fungicides, and pesticides.

Just as in club foodservice, an investment before the fact is necessary to operate the course maintenance side of the business. One of the most important investments a superintendent makes is in turf care equipment, the average of $5,900 for repairs to equipment. The superintendents reported being billed an average $11,300 for water last year.

A few respondents indicated plans to purchase additional turf care equipment in 1977. Rotary mowers, gasoline-powered maintenance carts, riding greens mowers, and pickup trucks were listed the most often. In that order.

In 1976, 492. Better than 67 percent of them said their expenditures were up from 1976 than in the previous year.

WHAT YOUR CUSTOMERS
BEN HOGAN'S REVOLUTIONARY

The Ben Hogan Company has designed steelshafted clubs that offer you and your customers the best of both worlds. The lightness of graphite without reduced feel and higher costs. Plus torsional stability

<table>
<thead>
<tr>
<th>FEATURE</th>
<th>LEGEND SHAFT</th>
</tr>
</thead>
<tbody>
<tr>
<td>LOW CLUB WEIGHT</td>
<td>YES. We've removed weight in all the right places. The Legend-shafted clubs* are a total concept involving removal of weight from both head and grip, as well as the shaft. Yet, swingweight has been kept constant. In fact, our Legend-shafted clubs are 7 to 10% lighter than our lightweight Apex-shafted clubs.</td>
</tr>
<tr>
<td>LOW MOMENT OF INERTIA</td>
<td>YES. This means easy swinging for less-tiring play. A measure of the effort needed to swing a club is called the &quot;moment of inertia.&quot; The lower the &quot;moment,&quot; the easier a club is to swing. The reduced weight of the Hogan Legend-shafted clubs is distributed so it lowers the &quot;moment,&quot; making Legend easier to swing. This means your customers can play stronger, clear through the back nine. Conventional steel can't make this claim. Neither can graphite.</td>
</tr>
<tr>
<td>LOW BALANCE POINTS</td>
<td>YES. With Legend, your customers will feel the difference...because we've improved our balance. By moving the balance point closer to the club head than ever before, we have increased club head feel.</td>
</tr>
<tr>
<td>MORE “FEEL”</td>
<td>YES. Balance plus steel equals “feel.” A steel shaft, like Legend, transmits the impulses from the club head to the hands very efficiently, giving your customers greater “feel” of their shots. Graphite shafts, on the other hand, dampen these impulses, providing reduced feel.</td>
</tr>
<tr>
<td>HIGH TORSIONAL STIFFNESS</td>
<td>YES. Legend helps keep your customers’ game under control. Our clubs are engineered with the torsional stiffness of steel for less club head deflection at impact...and shot control. Something graphite just can't promise. In fact, with Legend, your customers may be able to use a stiffer shaft...which can improve their accuracy. You might want to suggest this.</td>
</tr>
<tr>
<td>STRENGTH</td>
<td>YES. A strong reason for your customers to play Legend. Legend-shafted clubs give your customers the strength of steel. So, unlike graphite, they won't have to worry about shaft breakage under pressure. Our tests show that Legend passed strength tests by substantial margins.</td>
</tr>
<tr>
<td>MORE CLUB HEAD SPEED</td>
<td>YES. Lightness means greater club head speed for more distance. Legend's lower weight and lower &quot;moment of inertia&quot; produce increased club head speed. The result is increased distance.</td>
</tr>
</tbody>
</table>

Lightness, distance, control and feel—only Legend has it all. Exclusively from

Circle 121 on free information card
Admittedly, Don Padgett was a late starter in the golf business. He was 21 before he even picked up a golf club. In business, though, longevity is no indicator of success and as Don Padgett just gets into his 50's, he starts a new job as national president of the Professional Golfers Association of America.

A native of New Castle, Ind., Padgett started his career as the golf professional at the American Legion Golf Course there in 1949. He left in 1952 and headed for Green Hills Country Club, outside Muncie, Ind. After more than 20 years at that facility, he moved on in the fall of 1975 for the famed Callaway Gardens in Pine Mountain, Ga., as that resort's director of golf.

Padgett served a record three terms as Indiana PGA president: 1959-61, 1966, and again from 1969-70. In 1971, he became a regional vice president of the PGA. The Hoosier native eventually ran for national PGA treasurer in 1973 and won.

Recently, Padgett sat down with GOLF BUSINESS Managing Editor Nick Romano, also a Hoosier, and did one of the most in-depth interviews dealing with the trade and the association ever given by a national PGA president.

GOLF BUSINESS: You have been quoted as saying that employment will be the key issue in your administration. There are still many paying PGA members who can not get a job. What are your immediate plans to change that situation?

Padgett: We have Dr. Gary Wiren working almost full-time on jobs and club relations. We had a job seminar in Arlington, Tex., March 21-23. We asked every section to send a representative, to be paid for by that section, to discuss the clubs in the business that don't have golf professionals and how to contact those people and tell them the PGA story. We're going to try to get clubs that both you and I are familiar with that do not have a golf professional.

With the golf boom sort of easing off a little, some of those people may think, if we're going to have a club 10 or 15 years from now, we'd better have some new players. You are not going to have new players unless you have someone there to teach them and to get these people's youngsters involved in the game. So we're going to make an effort at clubs that don't have golf professionals to invite them to have some professionals go and play with them and try to emphasize to them what a professional really means to a club.

The Club and Professional Services program is at least a year old. Has it been a success for the PGA and is the message of the association getting across to those who do not hire PGA professionals?

Bill Blanks has laid a lot of stones for Gary. Of course, we have simply switched Dr. Wiren from education into a related subject, which is employment, and he's been carrying on and does have some new ideas. We also expect to get some ideas out of this employment seminar. We are fully aware of how many clubs do not have golf professionals, and we think it is probably a poor fiscal policy for them in reality.
