Golfers will work around just about anything to play a well-conditioned course. It's that commitment that motivates Syngenta to provide you with what you need to enhance play. Products like Heritage® fungicide ensure the turf is disease-free and best able to respond to your agronomic plan and course schedule. It controls a broad spectrum of diseases from the inside out so that neither weather nor mowing can hinder its effectiveness. Heritage is an important part of a preventive spray program, which you can find for your area at GreenCastonline.com.

At Syngenta, we understand why golfers schedule their lives around ideal conditions. Our job is to create products that help make those conditions happen most often.

Fortune

The golf rush brought American superintendents to China several years ago.

They don't plan on leaving

BY LAURA WATILO BLAKE, CONTRIBUTING EDITOR

With the same fervor of the gold rush, some golf industry professionals have looked east to China in search of what the Chinese call “green opium.”

Since the first golf course opened on mainland China in 1984, the need for imported expertise in design, construction and maintenance has created lucrative jobs for experienced professionals such as Eugene Baston, a Georgia native who is now superintendent of the Tianma Country Club in Shanghai.

Baston, a former president of the Golf Course Superintendents Association of America (GCSAA), says the “opportunity to be a part of the golf expansion in China” lured him to the country 10 years ago. At the time, only one course existed in Shanghai, and seven were under construction. Today there are 27 golf courses in the city and four more under way.

After receiving a turf degree from Pennsylvania State University, Lee Sellars started his professional career at the Loxahatchee Club in Jupiter, Fla. He moved on to a superintendent position at Wycliffe Country Club in Palm Beach. After working there for a year, an industry friend called to tell him about a superintendent position at the Discovery Bay Golf Club in Hong Kong.

“I was nervous, but Hong Kong sounded exotic,” Sellars says. “I had already made up my mind [to go there] before I hung up the phone.”

After spending 10 years living and working in Asia, Sellars has discovered the secret to surviving as a foreign superintendent in China — the willingness to adapt to existing cultural norms, both personally and professionally. It wasn't easy, though. Adjusting to a different lifestyle abroad took time.

“I came here with a two-year contract with every intention of going back home,” he says.
“I’m still here. I really want to be able to maintain a golf course standard that I maintained in Florida. Every year I step closer to that standard. That’s what keeps me going. Plus, I love Hong Kong. I love the culture, my friends and my lifestyle here.”

Baston and Sellars have found good fortune in the Chinese golf industry. However, the Chinese government has placed a three-year, nationwide moratorium on new course constructions. The restriction represents a concerted effort to address water conservation and slow the pace at which valuable farmland is being gobbled up by golf course developers.

Few worry the ban will bring an end to the golf rush in China, however.

“We are in a wait-and-see mode to evaluate the impact of this restriction,” Baston says. “But I believe golf will continue to grow in China. I think it will be a lot slower than some of our industry friends would like it to be, but certainly it will grow on a scale to meet the demand.”

Currently, the demand for the game in China remains relatively low. The way economists describe the Chinese thirst for all things Western, one might assume that every Tom, Dick and Yao has picked up a set of golf clubs, but that’s clearly not the case. The sport remains a pastime for foreign expatriates as well as the rich and powerful. The average Jiao

BASF Means Better Performance...Which Means (And everybody loves better turf.)

We Don't Make The Turf. We Make it Better.™

Better turf comes from better products. And better products come from a commitment to performance. At BASF, that commitment is evident in everything we do. From the 1,000 patents we apply for each year to the superintendent's council we formed to better understand your needs. We're proud of our performance. After all, it ultimately means better turf for your golfers ... and maybe even better parking for you.

cannot afford the cost of a membership that ranges from $35,000 to $100,000.

The moratorium may be good news for the few who can afford to play the game. Without worrying about increasing competition, existing facilities can focus on improving play conditions, something that has been lacking at many Chinese courses, explains Darren Cribbes of TurfGrass Systems, an independent management and agronomy consultancy based in Hong Kong.

“TurfGrass Systems is about supporting clients’ moves forward.”

Cribbes developed expertise in how to do just that after receiving an offer 10 years ago to renovate a run-down golf course in Hong Kong. At the time, little potential for career advancement existed in his home country of Australia, so he jumped at the opportunity.

Horror stories abound across China. On more than one occasion, inexperienced maintenance crews have operated new equipment until it stopped functioning. Thinking a machine had broken down, they cannibalized it for spare parts, not realizing it had only needed gasoline.

One legend has it that a greenskeeper in Shenzhen applied Roundup on the greens to kill the weeds. That tale didn’t have a happy ending.

“The stories we come across are often sad misfortunes,” Cribbes says. “My business is about supporting clients’ moves forward.”

Cribbes believes that bad advice during golf’s pioneer days in China and misunderstandings about the game contributed to the problems that plague older courses today. Furthermore, finding qualified maintenance employees continues to be a problem.

“The present lack of experience and support education for golf workers and managers creates a situation where it’s easier for them to devise a means around an issue rather conduct a sound repair,” he says.
Athletic Turf delivers the kinds of hands-on, practical information on athletic turf maintenance and technology that managers are hungry for. The editorial scope of Athletic Turf includes:

- Product Innovations
- Practical Information
- Business Management Solutions
- Technical Information

You asked for it and here's what you're saying!

I am so happy that you have brought back Athletic Turf. This is the best athletic sport field publication around, BAR NONE!!!!!!

scientific methods in China. Now he has created a niche for himself by helping other struggling courses "achieve their goals in an efficient and environmentally conscious manner."

In addition to working with individual clients to achieve their goals, TurfGrass Systems offers two yearly IPM classes. Furthermore, Cribbes has partnered with Dr. Zhaolong Wang at Jiao Tong University in Shanghai to establish a diagnostic lab on Chinese soil to aid in insect, disease and weed identification problems.

"This is a small way in which focused effort can support the industry with independent and specific assistance at the university level," he explains.

While physical, scientific and engineering issues are universal, Cribbes identifies three key differences in how golf courses are managed in China:

1 Costs to operate facilities can be underestimated. Little regard is given to long-term maintenance and the expense associated with some projects. It's also difficult for some club managers to understand the consequences of uneducated free advice on the health of the facility.

2 Water conservation. "Water resources across China can be managed significantly better by improving efficiency of use," Cribbes says. "It would provide far greater benefit."

Water conservation is a big issue worldwide, particularly in populous China. The Chinese government has issued strict rules on the monitoring of
