TOP 5 LAWS OF GOLF

LAW 1: No matter how bad your last shot was, the worst is yet to come. This law does not expire on the 18th hole, since it has the supernatural tendency to extend over the course of a tournament, a summer and, eventually, a lifetime.

LAW 2: Your worst round of golf ever will almost immediately follow your best round ever.

LAW 3: Brand new golf balls are water-magnetic. Though this cannot be proven in the lab, it's a known fact that the more expensive the golf ball, the greater its attraction to water.

LAW 4: Golf balls never bounce off of trees back into play. If one does, the tree is breaking a law of the universe and should be cut down.

LAW 5: No matter what causes a golfer to muff a shot, all his playing partners must solemnly chant, "You looked up," or invoke the wrath of the universe.

n eighth-grade shop I built a wooden jewelry box, but the lid wasn't flush with the base and the latch wouldn't close. That's probably about the last time I built something from scratch. But being in a new home for nearly a year and dreaming of crafting built-in, wrap-around bookcases, I decided to use my hands for something other than stripping wallpaper, painting and ripping up carpet. An easel seemed like a good place to start — a simple, fun, creative, educational toy for the kids. If only it had been that easy.

The plan was sickeningly basic. Two big pieces of plywood fused together with a piano hinge, linked with small chains, and some boxes attached for supplies. I found the plans from Georgia Pacific (www.gp.com), headed to the hardware store and was ready to start my evening career as a carpenter. So, in relative order, here are some things that I learned the hard way:

1. Don't buy the cheapest plywood. The fellow at the hardware store asked me if I wanted pre-sanded plywood, which would run about $8-$10 more than the $16 sheet I was looking at. That wouldn't have been great advice and saved me from learning that cheap plywood really doesn't sand.

2. Let the hardware store help. Most places will give you two free cuts on wood purchases and extras for $1 a cut. Take advantage of this. For this project I needed two 30-inch by 47 3/4-inch panels. Having them handle it (in mere seconds) would have saved me time and learning about the evils of kerf.

3. Kerf is a four-letter word. The kerf is the width of the saw cut. If you do not account for it, your cuts will be off. It wasn't until I discovered one of my panels was about one-fourth-inch longer than the other that I met Mr. Kerf. This boneheaded move also led to the requirement of a shorter piano hinge (I had 30 inches for the width of the panel). The hinge was too long because of my bad cuts and the kerf.

4. You should be respectfully scared of saws. Enough said.

5. Paint before you construct. You would think this would be self-evident.

IF YOU REALLY WANT TO
CUT JUST ONCE ON THIS
PROJECT, MEASURE TWICE
AND REMEMBER THE KERF

NEW DISARM™ BECAUSE SPEED IS OF THE ESSENCE.

When you're faced with the threat of brown patch, gray leaf spot, anthracnose and other turf diseases in your fairways and greens, you need the proven performance of new DISARM™ Fungicide. Unlike most strobilurin fungicides, DISARM features fast penetration of leaf surfaces, rapid translaminar movement and enhanced systemic activity for longer-lasting residual control and complete leaf and crown protection. Plus, it's rainfast in as little as 15 minutes. Add it all up and DISARM gives you performance that's equal to or better than the leading strobilurin. To learn more, visit www.arystalifescience.us/disarm or call 1-866-761-9397.
