Realize the benefits of deep-tine aeration with the new Toro® ProCore® SR Series deep-tine aerators.

Noticeably healthier turf. Vigorous root growth. Lower irrigation costs.

From lightweight machines for smoother, softer greens, to heavy-duty aerators that break up even the most compacted surfaces, Toro offers high performance aerators that penetrate up to a depth of 16 inches. The Toro ProCore SR Series. The right choice.

To unlock the full potential of your course, you have to dig deeper.
Despite tight maintenance budgets, superintendents continue to provide players the best conditions possible.

Turfgrass Trends
This month, Golfdom’s practical research digest discusses how to differentiate between wear and compaction, and how their interaction affects turf stress. Also, a combination of fertigation and subsurface drip irrigation could provide quality turfgrass while reducing possible nitrate-nitrogen contamination and water use. See pages 59-63.

You've got enough to worry about, so use Trinity® fungicide to control anthracnose, brown patch, take-all patch, summer patch and dollar spot, even during summer stress periods. Use it to suppress algae, too, which can lead to higher turf quality. Like the entire family of BASF fungicides, Trinity works. So don't worry. Everything will be a-ok.

The Golf Industry’s Mixed Message

BY LARRY AYLWARD

I’m all for golf courses getting away from their super-model looks, but this transformation must occur slowly and subtly. Golfers have been conditioned to expect perfect-looking golf courses, and superintendents have been conditioned to provide perfect-looking golf courses. This dynamic isn’t going to change overnight.

Hyler and the USGA also need to come up with a better word than “brown” if they want to replace the word “green.” Many people, including superintendents, believe that “brown” turf equates to dead turf.

And, by the way, what’s wrong with green turf? Why are so many people determined on taking the green out of golf?

I guess that’s another story for another day.

Aylward can be reached at laylward@questex.com.
“We’re really pleased with the performance of Quali-Pro. Getting equivalent efficacy at a lower price is really big, especially with the economy the way it is today. We continue to work with Quali-Pro because they’re working great for us.”

David Wienecke, Superintendent, Chambers Bay Golf Course
Site of the 2010 U.S. Amateur Open and the 2015 U.S. Open

Keeping your course at its best requires quality control and better value than ever before. That’s exactly what Quali-Pro has been delivering since day one — high-quality, high-value plant protection products, manufactured and supported by Makhteshim Agan, the worldwide basic manufacturer of agrichemicals.

Call 800-979-8994 or visit quali-pro.com for more about proven performance and outstanding value from the brand you can trust — Quali-Pro.
Rounds down 3 percent for the year
Golf rounds were down 2.9 percent in May compared to the same month in 2009, according to a survey of 3,870 courses by Golf Datatech. Rounds are down 3 percent for the year.

Rounds were down substantially in the West, up to 17.5 percent in Idaho, Wyoming and Montana. Rounds were up 8.2 percent in the New England area in May, and they’re up 10.1 percent in that region for the year.

Green shoot for the golf economy
Golf may be slow in much of the country but industry vendors remain committed to the game in North Carolina and South Carolina. Commercial suppliers have come out early and strong in support of this year’s Carolinas Golf Course Superintendents Association Conference and Trade Show in November in Myrtle Beach, S.C., according to a Carolinas GCSA news release.

Nearly 250 exhibit booths, or more than two-thirds of those available, have already sold even though the event is still almost five months away. That number exceeds sales for the same time last year, even though registration opened nearly a month later this time around.

“This is a great show of confidence in the game in our region,” says Carolinas GCSA Executive Director Tim Kreger. “For so many of our vendors to commit so heavily so far in advance says something about their faith in the game here and the men and women who present the courses we play on.”

The Carolinas GCSA’s annual event is the largest regional conference and trade show for superintendents in the country.

By Larry Aylward, Editor in Chief

The big buzzword in agriculture, which has filtered down to the golf course maintenance industry, is “sustainability.” Then again, the “S” word seems to be the buzzword in just about every industry these days.

Many companies that supply equipment and chemicals to the golf course maintenance industry have grasped the sustainability concept.

One of the companies, BASF, recently held a media summit in Chicago to discuss sustainability. The two-day event, held in June, focused on sustainability in agriculture and turfgrass maintenance, as well as other matters pertaining to the issue.

Jan Buberl, who assumed the role of BASF’s director of specialty products last October, told Golfdom that golf course superintendents are aware of sustainability, even though they might refer to it as another term.

“It’s our job to make them aware and conscious of the concept,” Buberl said. “We want to know what we can do and what we can offer as a company to help in the situation.”

Superintendents may be resistant to sustainability, especially if they don’t understand its nuances.

“It’s our job to make them more comfortable with it, and it’s an educational process,” says Buberl, who stresses that superintendents must be educated about the balanced approach of sustainability, which will allow them to do their jobs better in the long run.

Echelon® turns follow-up applications into a much smaller job.

Discover the preemergence *Poa annua* application that works harder, so you don’t have to.

It’s time to get more out of your fall herbicide application. Echelon® herbicide combines long-lasting preemergence control of *Poa annua* with powerful preemergence and postemergence control of yellow nutsedge, kyllinga and select broadleaf weeds — so a single application goes a long way. And with less need for follow-up applications, Echelon saves you time, labor and herbicide costs. In fact, a *Poa annua* treatment with Echelon herbicide works so hard, it could be the last herbicide application you make this year!

For more information about Echelon herbicide, log onto www.fmcprosolutions.com to review the learning module, or contact your FMC Sales Representative or local FMC Distributor.
As golf course superintendents, you may be faced with questions regarding pesticides and the effectiveness of the tools you use daily. It’s important to be aware of “what you’re up against” when it comes to the information your customers may be getting from groups who oppose the use of pesticides.

In May, the 28th National Pesticide Forum, “Greening the Community,” was held by Beyond Pesticides in Cleveland. During the opening session, “Pesticides 101,” Caroline Cox, a Beyond Pesticides board member and research director for the Center for Environmental Health in Oakland, Calif., outlined the “10 Reasons Not To Use Pesticides,” renaming her session to clarify her message.

Here are a few of the points this organization is spreading to the general public:

► Pesticides don’t solve pest problems. “If pesticides really solved pest problems, we wouldn’t use them repeatedly,” Cox explained. “Every year in the U.S., a billion pesticides are used. The amount isn’t going down.”

► Pesticides are hazardous to human health. Three hundred million pounds of cancer-causing pesticides and 150 million pounds of pesticides that cause reproduction problems like miscarriages or birth defects are used annually, Cox told the group.

► Pesticides cause special problems for children. “For their size, children drink more water and eat more food than adults do,” she said. “Their play exposes them to pesticides. They do somersaults on the lawn and they sprawl out on the carpet to read a book. All of these things increase their exposure to pesticides.”

Kids are also growing and developing, she added. “If they’re exposed to pesticides when they’re at critical stages of growth or development and their growth changes, this is something they have to live with for life. For instance, some common pesticides appear to affect the developing brain so a child’s brain will be different when [he or she] grows up.”

► Pesticides contaminate water and air. The U.S. Department of Agriculture’s National Monitoring Program found 57 pesticides in public drinking water samples in 2009, and the U.S. Geological Survey found pesticides in 90 percent to 100 percent of rivers and streams they tested in 2006. After stating these facts, Cox concluded that “pesticides used on lawn and roadsides do end up in urban streams and rivers.”

► Pesticides are hazardous to fish and birds. “We share the planet with other living things and they pay the price as a result of our pesticide use,” Cox said, adding that 100 million pounds of pesticides per year kill fish, according to the U.S. Geological Survey.

► Pesticide health and safety testing is conducted by pesticide manufacturers. “The
Don’t get angry about anthracnose.

Get even with Autograph® fungicide.

Phoenix Environmental Care is helping you go from mad to glad. Autograph® is an improved NexGen formulation of aluminum tris, providing superior control of anthracnose and other soil-borne diseases while supporting your turf’s natural defense mechanism against overall stress.

Want revenge on other turf diseases? Go to www.PhoenixEnvCare.com/solutions for more solutions to your turf management challenges.

He’s Got Game

BUT GREGG BRENINGMEYER SAYS HE NEEDS TO PLAY GOOD GOLF TO CONDUCT GOOD BUSINESS

By Larry Aylward, Editor in Chief

Gregg Breningmeyer is a fine golfer. But he’d better be, because he says he has to be.

Breningmeyer, group director of sales and marketing for John Deere Golf, is a 7-handicap player who used to be an 18-handicap player four years ago and even higher before that. Because of his job — he plays a lot of golf with John Deere Golf clients on the course — Breningmeyer worked hard to improve his game on his own dime.

“Frankly, I dedicated myself to getting better because I was embarrassing myself,” Breningmeyer says. “I was doing my business relationships more harm than good by playing poorly.”

Breningmeyer travels frequently and all over the world. He has played golf in places that a lot of people have never heard of. And most of the people Breningmeyer plays with, of course, are associated with golf courses as owners, general managers, superintendents and in other capacities. Most are very competent players. So you can see why Breningmeyer wanted to be as good or better than his playing partners.

“Think about it from a purely business relationship: Where else can you get a customer’s undivided attention and time for five hours than the golf course?” Breningmeyer asks. “But you don’t want that time to be torture, or you won’t get another five hours with that customer.

“That’s what drove me to get better,” he adds. “Plus, I love the game.”

Funny thing, Breningmeyer says he has closed many deals with clients on golf courses without even talking business. “It’s because I went out and made friends with them and played golf with them, and we had a good time together,” he says. “That alone pushed the deal in my favor.

“This is a relationship-driven business,” he adds. “But golf sales is relationship selling on steroids. That’s why I spent my own money and found myself a coach and told him, ‘Turn me into a good golfer in a year.’”

Indeed, a 7-handicapper is a pretty good golfer.
