soil and clogging it up? Should I recommend using northern peat or Sphagnum peat rather than a peat from a local source? What infiltration rate is acceptable and what will it be ten years from now? How can I keep the green from being too hard? Which grass variety will perform the best under the conditions we are expecting to have?

What about the irrigation system? What capacity do I need? What kind of a system will be the best for this golf course? Who will install it? What can I expect my maintenance costs to be? How much of the rough should be watered? Do I want to make provisions for adding to the system later? What kind of control do I want on the system?

In today's trend toward bentgrass fairways should we use a bent? If so, which one? What sort of renovation program will we need? What will be the long term maintenance cost as compared with Poa annua? Will I have problems with winter injury on bent? If I use a bluegrass, which mixture would be best? Can I maintain a bluegrass under the type of conditions the golfer expects to have and keep Poa annua out?

Are there any important questions that I have not asked myself?

MEMBERSHIP REPORT

New members accepted at Board Meeting on March 8, 1983:

Reclassifications:
