The metropolitan area was growing and it wasn't long before the farm pastures became golf courses. In 1956 when they needed more space they built a new building just a little west on Highway 12. They also expanded their employees to twelve.

In 1972 Ford's equipment line was expanding and they were offering more tractors and equipment to light utility users like the ever growing golf courses. Bud and Jerry needed to expand one more time. They built their present building in 1972. This enabled them to supply the needed equipment and services for the golf course business.

Long Lake Ford Tractor now is employing a total of thirty people; 10 mechanics, 2 service managers, 8 sales people and a complete bookkeeping department. They sell a complete line of equipment ranging from lawn and garden equipment, nursery and golf course equipment, skid loaders, excavators, wheel loaders and backhoes in all sizes. They also carry a complete line of trailers.

The building facilities cover five acres and can supply the equipment, parts and service to handle all Ford owners.

Thank you for giving us the opportunity to serve you. We sincerely appreciate your business.

EDITOR'S CORNER

by DOUG MAHAL
Chairman
Editorial Committee

It looks as though we may finally get some warm weather. Much of the Poa annua I saw in May didn't grow at all. Mother Nature certainly can be unpredictable from year to year or even day to day. What makes the superintendent's job a real challenge is coping with the unpredictability and still maintaining a predictable golf track. The turf managers in Minnesota do this as well as anyone in the world. It's a great accomplishment! Keep those channels of communication with the pro, manager and committee chairmen free and open. It can only improve your management tasks.

It was a beautiful day for our monthly meeting at Hastings Country Club. Steve Schumacher had the course finely tuned and in great shape. It was a real pleasure to play. Thanks to Steve and the entire club.

staff for a super day. We also appreciate the time Dr. French from the U of M could spend updating us on current tree concerns. His sincerity and frankness are always welcome.

And speaking of frankness, thanks to our HOLE NOTES contributors for last month, Roger Kisch, Jeff Markow and John Hopko. Very timely subject matter, fellas. Remember, if anyone has a thought they would like to share with the membership, get it on paper and shoot it down to Anita in the M.G.A. office or myself.

Plan to attend our monthly meeting on June 11 at Forest Hills in Forest Lake. Superintendent Lyle Olson will discuss his 55,000 ft. drainage tile project. What an undertaking. It should be interesting to hear Lyle’s comments.

Keith Scott who is the M.C.C.S.A. representative for the first annual Green Expo Show is still looking for volunteers to help with this huge endeavor. The date for the Expo is Wednesday, June 13 and will be held at Anoka Vo-Tech, Rum River campus site. You all should have received a special mailing on the event. Get those in and give Keith a call if you can help him with some of the work.

On a sad note, Superintendent Jerry Weyrens of Angushire Golf Course in St. Cloud died recently while in Arizona. As a gesture expressing our gratitude for Jerry’s dedication to the profession, M.G.C.S.A. has sent flowers to his wife, Mary Ellen, and family. Our condolences go out to them.

Most of us have our full compliment of seasonal employees now. We can now begin putting on the fine touches which make upper midwest golf courses some of the best. Have a great month of June and see you on the 11th and 13th, hopefully.

ALL ABOUT TREES
by JOHN BALL  UNIVERSITY OF MINNESOTA
TIM SPENCER  TECHNICAL COLLEGE, WASEC

The most important golf course plants are grasses, no question; but the dominant plants on most courses are trees. By dominant, we are referring to their size. Trees stand above the horizon, define

1-3 ton .......... $195.00 F.O.B. Chaska
3-5 ton .......... $185.00 F.O.B. Chaska
Truckload Bag .. $135.00/ton + Freight
Truckload Bulk .. $115.00/ton + Freight

LANDSCAPE & TURF SUPPLY

GOLF FAIRWAYS . . . One to three applications a year at 600 to 1,000 pounds per acre provide a rich, velvety turf. Milorganite-fed turf needs less water due to Milorganite’s low salt index. Dormant winter applications hasten spring greenup and make better use of labor on golf courses and sports fields.

GOLF GREENS AND TEES . . . Milorganite feeding (write for detailed program) — as the source of nitrogen, phosphorus, and all minor elements — simplifies maintenance. This fertilizer assures a uniform and continuous growth. Dollar spot and other turf diseases are less frequent and less severe according to tests at noted Agriculture Experiment Stations. Less fungicide is needed to prevent or stop them. Milorganite assures optimum turf color and density — true quality.

ATHLETIC FIELDS . . . Ample Milorganite every 4 to 6 weeks of growing weather is the secret of good grass cover on heavy wear sports fields. A dormant application following the last game is widely practiced for early spring "greenup."
