

FACTS AND FALLACIES OF FAST GREENS

by JAMES T. SNOW, DIRECTOR
NORTHEASTERN REGION
USGA GREEN SECTION

In retrospect, the introduction of the Stimpmeter by the USGA in 1976 foreshadowed major changes for the way golf courses are maintained and for the way the game itself is played. By enabling golf course superintendents to easily determine the speed of greens, the Stimpmeter has greatly expanded our understanding of how maintenance practices can be manipulated to control green speed. As a result, golfers at every level throughout the country are enjoying faster, truer putting surfaces on a day to day basis than ever before.

While their greens have been fast and smooth, however, the road that the superintendent has been forced to accommodate these changes has occasionally been slow and bumpy. Interested but uninformed golfers and club officials have placed heavy pressure on the superintendent to produce consistently ultrafast greens at their courses, testing the limits of the health of the turf and sometimes pushing it over the edge. Along the way, rumors and misinformation have pervaded every locker

room with respect to how fast the greens should be, how to get them that way, and what might happen if they're pushed too hard.

One of the indisputable facts today is that greens are generally faster than they were only a few years ago. A national survey done by the USGA Green section in 1976 showed that the average green rolled approximately 6 feet 6 inches according to the Stimpmeter, whereas the average green today is probably closer to 8 feet. It's also a fact that most golfers have short memories. Though greens are faster than ever, complaints about slow greens are more common than ever.

So how fast is fast? In my view, the following offers a reasonable perspective on the subject.

- Fast for regular play 8' to 9'.
- A reasonable range, 7'6" to 9'.
- Ultra-fast for regular play, above 9'6".
- An unreasonable range, above 9' at all times.

Due to the vagaries of the weather and other circumstances, it is impossible to maintain a precise green speed throughout the year, but maintaining speeds between 7'6" and 9' should be feasible. Speeds of 9' should be established only for special occasions. Trying to keep green speeds above 9' at all times, as desired by some

golfers, often results in serious problems and should be avoided.

Achieving fast greens has been well studied and involved proper mower maintenance and adjustment along with the manipulation of cultural factors such as fertilization, irrigation, topdressing, verticutting, rolling, etc. To achieve ultra-fast greens, all of these programs must be pushed to the limit. In the process, extreme stress is placed on the turf and jeopardizes its very survival during periods of difficult weather. If a goal of maintaining fast or ultra-fast greens throughout the season is ever to be achieved, then a real effort must be made to control or minimize other stress factors as much as possible. These include:

- Poor drainage.
- Moisture stress due to a poor irrigation system or improper irrigation practices.
- Soil compaction
- Diseases, insects and nematodes.
- Unreasonable traffic (e.g., play during bad weather, winter play, etc.)
- Tree effects (shade, root competition, poor air circulation)

Despite efforts to control these stress factors, however, following through with all of the practices necessary to produce consistently fast or ultra-fast greens can thin and

weaken the turf to such an extent that many undesirable consequences can occur. Among the problems observed:

- Establishment of moss and algae.
- Encroachment of crabgrass, goosegrass and other weeds.
- Proliferation of summer patch, take-all patch and other difficult to control stress related diseases.

Trying to maintain consistently ultra-fast greens means always living on the edge of disaster, and once golfers become used to these fast greens, they expect them to be that way all of the time. The superintendent is then locked into a maintenance program which at best will make him a nervous wreck, but which ultimately could spell disaster. In the end, the piper will be paid!

Recommendations:

- Try to keep the speed of your greens in the reasonable range of 7'6" to 9'. Aim for the 8' to 9' range if you wish but recognize that green speeds will vary from day to day and season to season..
- Avoid getting caught up in the race for ultrafast greens, striving for speeds of 9'6" only on very special occasions, if at all.

THEY HOLD DOWN MORE THAN ONE JOB.

Kubota's mid-sized tractors are very versatile. You'll find them at

work on farms, in parks, nurseries, estate homes and even on construction sites.

The reason is simple. Our L-Series tractors come with features you'd expect to find only on bigger, heavier machines. For example, 3-, 4-, or 5-cylinder diesel engines with PTO horsepower from 21 to 40.

Other features you can select include 8x7 or 8x8 mechanical or hydraulic

shuttle-shift. A choice of 2- or 4-wheel drive on most models. A hefty 3-point hitch. And more.

So if you're looking for a tractor that can get the job done, whatever it is, you've found it.

The Kubota L-Series.

- Explain to your club officials about the potential consequences of trying to maintain consistently ultra-fast greens.
- Be on the lookout for the symptoms of weakness noted earlier, and be prepared to compromise your green speed goals in an effort to strengthen the turf.

In the long run, the game of golf will be best served by taking a reasonable approach to managing green speeds, avoiding the excesses which can only result in dead grass and unhappy golfers.

OUR COLLABORATOR, June 1988

EDITOR'S CORNER

BRAD KLEIN, CGCS

After having a summer drought isn't it amazing that we would get rain during two of our monthly meetings. In May it rained all morning at Hastings Country Club and in September it rained all afternoon at St. Cloud Country Club. Next season if someone is having a hard time getting the old irrigation system going just have a MGCSA meeting and send the crew home.

We should all give Kerry Glader and the St. Cloud Country Club staff a hearty thank you for their tremendous effort to please everyone at the Harold Stodola tournament. You may not realize it but Kerry had the club's Pro Am tournament the three days prior to our own member guest. The golf course was immaculate, the food was superb but 200 cold, wet and naked golfers was the most pathetic thing I have ever seen.

Tom Mundy once again donated golf carts for the tourna-
