Research Committee Update

By Fred Taylor
Research Chairman, Mankato Golf Club

Members of the 1996 MGCSA Research Committee met at the St. Paul Campus of the University of Minnesota on March 14 to discuss goals, objectives and potential areas of study for the coming year. The committee agreed that we would like to emphasize local research and renew our relationship with the University of Minnesota. The potential of the Rosemount (Empire Township) facility was also discussed. It was felt that if there was ever an opportunity to help turf research on a grand scale, this would be it. The committee will support this endeavor where it can.

Areas of study being considered for support this season are as follows: 1) NTEP bluegrass trials at the St. Paul Campus; 2) Growth regulator/DMI Fungicide interactions; 3) Organic fertilizer comparisons; 4) Effects of introduced humates.

If you have any issues that you would like to see researched, please contact a committee member with your ideas. The Research Committee is comprised of John Granholt, Tom Parent, Butch Greeninger and Daryl Scheerhoorn with Bob Mugaas, Dr. Ward Stienstra and Dr. Phil Larson as advisors.

Par Ex® introduces a family of mid-sized fertilizer grades designed to meet the needs of today's closely-mowed turf.

WHY MID-SIZE GRADES FOR CLOSELY-MOWED TURF?

BECAUSE fairway-sized particles are too large to apply to closely-mowed turf.

BECAUSE greens-sized products can be difficult to spread.

BECAUSE IBDU® is the most reliable, most consistent source of slow-release nitrogen.
