amount of water was applied between 4-6 am through the Site Pro scheduling and completed at least 1 hour before we got started with the verticutting on the respective greens.

We verticut in one direction, double cut to facilitate a thorough removal of debris, topdressed, and fertilized with .25 lb of a balanced N:K, (NH4)2SO4 granular. Using the handhelds, we then finished the needed watering cycle and effectively moved everything into the turf canopy without the need to brush.

Our topdressing amounts were relative to growth and ranged between 2 and 3 cu.ft/1000. The frequency of this procedure was usually 10-14 days. I have a question on others topdressing amounts and frequency, primarily on Penncross bent/poa greens. I am accused here of not putting down enough. Thanks, everyone. - Joe Buege, Pebble Creek Country Club

Great posts guys. Joe, I topdress my greens almost every Sunday night through the season. Put down light using the SP1530 top dresser, the application is then watered into the canopy with the evenings irrigation cycle. We don't mow on Monday so the top dressing gets another sprinkling to knock it down further. No sand pick up on Tuesday! My mechanic's dream come true!

When I used to topdress heavily following 5/8ths core aerification, I would spike to break the matrix of sand that had developed over the aerification holes. Done soon enough after the first drag, the dry sand flows into the ground like sand in an hour glass. Drag again, and much of the top dressing has infiltrated the soil. -- Jack MacKenzie, CGCS, North Oaks Golf Club

Greens- as needed, usually monthly
Tees- about same as greens
Fairways- about three times/season-
Roughs-as required.

Determined by quality of cut, turf density, and weather conditions. Too hot or too cold, don't touch.

Used to spike greens monthly to aid input penetration. With hydroject, frequent topdressing, and wetting agents, use has diminished. Besides, I sold the old GM3, these units were on! -- Greg Hubbard, CGCS, Manitou Ridge Golf Club

WILEY vs. SOLID ROLLERS

I was curious to see what most of you use for rollers on your walking greens mowers. We are currently using Wiley rollers on our Toro 1000's and with the new expansions that we are building on our greens I am wondering if we would be better off changing to solid rollers to reduce the wear and tear on the clean-up passes? What are the pros and cons of these different types of rollers? -- Jeff Johnson, The Minikahda Club

Jeff, I triplex my greens, but plan to start a clean-up walker program next year

Turf Talk–
(Continued from Page 15)
My units will be set at .135 or so (a bit above my triple reels) and have solid rollers. Although my clean-up doesn’t have the pronounced wheel marks often seen on triplex greens, I am concerned with the limited health of these areas. Also, I use Primo and will continue to mow the clean up on an every third day regime. – Jack MacKenzie, CGCS, North Oaks Golf Club

* * * *
Jeff, if the area starts to show stress, solid is the way to go. Because we mow the clean-up pass every third day it has not been needed. – Jim Nicol, CGCS, Hazeltine National Golf Club

* * * *
Jim, we also rotate the days we do the clean-up passes but now with the greens becoming more ‘squared’ the mowers will put more stress on the turf in these areas. I will be watching closely for stressed turf and, if need be, I might have to switch to a solid roller. Will the solid roller allow us to get as close of a cut as the Wiley at .125? I ask this because I thought the reason for using the Wiley rollers was for the ability to get a better cut at a lower height. What are some of the down falls of the solid rollers? Debris collecting on the roller would be one of my concerns, what else can you veterans tell me? – Jeff Johnson, The Minikahda Club.

* * * *
On two of my greens I walk mow 6x/wk (skip Monday) with solid rollers. Turf stays as good as I can (shade, air movement, etc.). By bench setting (.140) at the same height it actually cuts higher thus better for the turf. We also use Primo @.08 bi-weekly and mow clean up lap every other day. – Kevin Clunis, CGCS, Tanners Brook Golf Course.
