Vertagreen
A product for all reasons

Balan offers pre-emergence control of Poa Annua, crabgrass, goose grass, water grass and foxtail.

Uniform particles flow smoothly, spread evenly.

One-fourth the nitrogen is Urea-Formaldehyde

Contains secondary and micro-nutrients — S, B, Mn, and Zn.

All potash derived from sulfate of potash.

Vertagreen Fertilizer
For Professional Turf with Balan 17–0–8

THE MAIN DIFFERENCE

...between private enterprise and government is found in this comparison: The formulas for making Coca-Cola and Kentucky Fried Chicken are still secrets. How to make a hydrogen bomb is on the newsstand.

FROM THE PRESIDENT’S DESK

Now is the time to make our decisions on what we are going to do and how we are going to protect our turf from winter injury. Many chemicals or combinations of chemicals are available to effectively control snow mold. However, winter injury, as was proven to us last spring, is more severe sometimes than diseased damaged turf.

Are there any alternatives? Yes, I think there may be. However, there may be as many solutions as problems. One solution may be late fall very heavy top dressing of greens and tees. I, along with many other superintendents, have tried top dressing and have realized some satisfying results.

More important than applying materials to protect the turf from winter injury problems is to very carefully inspect our courses for situations which may lead to the problem. So what I'm saying is that the majority of our problems we may have next spring are the results of existing situations today. The present situations that may later be problems are compaction, low fertility, shallow roots, water logged soils or all of the above.

The more proficient we become at identifying situations that later become problems, the more effective we can be in correcting those situations. It's rather like noticing some surface rust on the fender of our automobiles. If we do nothing to eliminate the rust, by next spring that fender may require costly repair. Maybe it's like the ad on T.V., "You can pay me now or pay me later".

Next month's meeting will be at the Hanson House in Long Lake, Minn.

On behalf of all members, Thank You, Host Superintendent Steve Schumacher and all the people at the Hastings Country Club. The weather on October 13 was a little chilly, but the hospitality was very warm.
HASTINGS' HIGHLIGHTS

DELUXE OPERATOR. Kromer Company's Fran Clark makes it look easy.

DIFFICULT. The Par 3 ninth yields many bogies and few birdies.

NEW MEMBERS. Left to right, Harold Davis, Douglas Nuernberg and Dennis Voigt were accepted.

RAKISH. Kent Kromer demonstrates sand trap raking unit.

We're seen in all the right places.

PUTTING PESTICIDES ON ICE

As winter approaches, the question of how to store leftover pesticides becomes an important one in many parts of the country. Ordinarily, public attention tends to focus more closely on improper application of pesticides, but recent news reports have graphically demonstrated the consequences of improper pesticide storage.

By their very nature, pesticides require careful handling and use. If they are misused, they can cause serious damage to people, animals and plants. Most of the time, pesticide hazards can be reduced by advance planning, common sense and, most importantly, reading the tables on pesticide containers.

By following these general guidelines, the dangers involved in storing pesticides can be greatly reduced: 1) Always store pesticides in the original container with intact, legible tables. 2) Never use any kind of food or beverage container for mixing or storing pesticides. 3) Store in an area located away from human food or seed storage. 4) The storage area should provide cool, dry conditions with good ventilation. Direct sunlight should not strike pesticide containers. A heat source may be needed in regions with below-freezing temperatures. 5) The storage facility should be equipped with a secure lock. Only authorized people should have access to potentially dangerous chemicals. 6) The storage area should be equipped with a fire extinguisher as well as first aid materials. First aid equipment, especially an eye wash station, is particularly important if the area is used for mixing chemicals. 7) Maintain an inventory of pesticides, including the compound name, type, amount and date received and the amount and date used. It is also helpful to mark containers with the date they were received. 8) Keep containers tightly closed and check frequently for leakage. Faulty containers should be replaced before they create a hazard. 9) A concrete, washable floor is desirable, but wash water should not be allowed to flow into any open body of water. 10) Check pesticide container labels for any special storage requirements.

MEMBER: M.G.C.S.A. AND G.W.I.
A Meaningful Combination ...... 

You and G.C.S.A.A.

I have often heard people say, "Why should I join the Golf Course Superintendents' Association of America? All I would get is the monthly magazine". If this were true, why then have over 4,000 people joined G.C.S.A.A.? Is the magazine that outstanding to pay $90.00 a year for? Maybe G.C.S.A.A. does have more to offer. Let's take a look.

STEVE YOUNG

..EDUCATIONAL PROGRAMS. Annual Turf Conference and Show.... features educational sessions and the largest turf equipment display in the world. NEW MEMBERS RECEIVE FREE ADMISSION THE YEAR THEY JOIN!!

..Educational Seminars....a variety of topics are available and are presented in various locations of the U.S. and just before the Annual Turf Conference. Topics include: Management, CPR, Photography, Design Principles and Turf Nutrition.

..PUBLICATIONS. Golf Course Management....a leading technical golf-turf magazine which contains both scientific and practical articles. No charge to G.C.S.A.A. members.

..SPECIAL SERVICES. Employment Assistance....a variety of services to members seeking new positions are offered. A member can be put on the Employment Referral Service list which circulates information about job openings throughout the country. New positions are advertised in Golf Course Management and Class AA, A, B, Associate and Student members may receive listings in Golf Course Management.

..INSURANCE. G.C.S.A.A. membership includes group life insurance without a physical exam for all members under age 65. Additional insurance is available on an optional basis.

..Most Important of All....by becoming a G.C.S.A.A. member you are strengthening an organization that has already benefited you just by its existence. G.C.S.A.A. has upgraded our profession and has an influence on you, both professionally and monetarily.

I personally have gained by belonging to both my State and National associations. The biggest benefit to me is meeting people from other parts of the country and discussing common problems ranging from diseases to personnel to sand-top dressing.

Your club can save thousands by investing a few hundred to help you become part of a dynamic organization which will continue to lead the turf industry and provide the attractive golf courses we all enjoy today. Join now!

Fill out the enclosed membership application form and return to me. I will get the necessary signatures from our officers and forward to the National Association. Don't forget to include $90.00.

SPECIAL NOTICE:
The DNR has developed a new hybrid game fish. They crossed a Coho Salmon with a Walleye and a Muskie. The new fish is called a "Cowallski" and as soon as they teach the fish to swim, it will be released in Minnesota waters!

EVALUATING YOUR OPERATION

With the passing of summer, golf course superintendents in many parts of the country have an opportunity to step back, take a deep breath and evaluate their operations. On many courses, heavy player traffic has slowed, seasonal employees have gone and budget time is approaching. It’s time to take inventory.

Besides the problems of getting the course and equipment ready for winter and inventorying leftover supplies, it’s also time to look back over the summer and take a mental inventory of your operation’s strengths and weaknesses.

For example, what went wrong during the season? Was your course damaged by disease or insects? If so, what can be done to prevent a recurrence? Now is the time to figure out what should be done and when.

Were your crew members aerifying the course on the day of a club tournament? The slow seasons are the time to work out lines of communication to prevent such misunderstandings from happening next year.

What can be done to improve the course? Take an objective look at your irrigation system, your equipment and the design and condition of your course. Maybe this is the time to plan improvements.

While you are evaluating your performance over the last season, don’t overlook the things that went especially well, either. Did you pick up any additional responsibilities this year, responsibilities you might like to continue? Did you try a new scheduling program that was effective? How can it be changed to work any better?

Which of your employees really came through for you? Did an assistant take over some of your responsibilities and run with them? Which employees are willing to put out a little extra effort? Which ones seem to have good, new ideas? Did one of your seasonal employees prove to be especially hard-working and reliable? If so, you will want to make arrangements to have him back next year.

Now take a look at those projects that were put off all summer. Now is the time to dust them off and get to work on them.

Here is where a good filing system comes in handy. By taking clear notes on problems and opportunities as they occur, and by adding to those notes when you evaluate your operation at the end of the season, you can develop a handy reference tool for use in the future.

Whatever your evaluation of the summer proves, it’s important to reap whatever benefits you can. If everything went relatively smoothly, it’s just as vital to know why as it is to uncover the causes if there were problems. By building on the past year’s achievements and avoiding its mistakes, we can face anything the future has to offer.

Reprint FORE FRONT

WORTH REMEMBERING

It’s unwise to pay too much, but it’s unwise to pay too little. When you pay too much, you lose a little money; that is all. When you pay too little, you sometimes lose everything because the thing you bought was incapable of doing the thing you bought it to do.

The common law of business balance prohibits paying a little and getting a lot - it can’t be done. If you deal with the lowest bidder, it’s well to add something for the risk you run. And if you do that, you will have enough to pay for something better.

John Ruskin
**Self-Propelled Turf Sprayer**

4 Wheels
Smother ride. More stability.

**Hahn Spray-Pro**

Precision application. Fast efficient spraying.
Centrifugal pump. 100 p.s.i. max. 55 g.p.m.
High pressure piston pump and hand gun optional.
16 h.p. cast iron engine. 3-speed transmission
160 gal. polytank with agitator.
