Greensmower Series 4
The Professional
for beautiful greens.

The Toro® Greensmower Series 4 is a 21 inch walk behind mower powered by a 3.5 h.p., 4 cycle engine. It features a 5 inch diameter, 8 blade reel assembly, grass catcher, transport wheels and more. The result is excellent quality of cut and superior performance, which is imperative in professional greens maintenance.

Those of you who missed the Green Expo '84 missed a great show. Keith and several members of other turf related associations out did themselves this time. I hope this kind of working relationship among turf related associations can continue.

Perhaps now is the time to review the safety habits of you and your crew. With familiarity comes carelessness. In the rush and stress of the busy season, shortcuts on safety procedures are tempting and can lead to bad accidents. I suggest a safety meeting with your crew where you review and stress the importance of using the equipment properly and according to the instructions of the manufacturer. What brings this so graphically to mind is the accident our treasurer, Mark Smith, had with a chain saw. Please give Mark a call and wish him well.

I have to pat the staff in the office on the back for the fine job they did on the 1984 Membership Roster. Only they know the endless detail that goes with trying to keep classifications, addresses and phone numbers up to date. However, with all the work, without you informing them of changes, it will not be kept current. So you see, the ultimate responsibility still lies with the member.

This year our picnic will be bigger and better than before. Please bring the family out for a great day at Baker Park.
THE SPILT PERSONALITY
OF THE BROOKTREE MUNICIPAL
GOLF COURSE

by RICHARD DICKS, JR.
Golf Course Superintendent
Brooktree Municipal Golf Course

The Brooktree Municipal Golf Course was developed in two stages by a private company and sold to the City of Owatonna one nine at a time. The first nine opened in 1963 and was known as the Owatonna Municipal Golf Course. The course was constructed along a creek in a flood plain area and is set in a fairly mature area. The greens are small, averaging 4,500 square feet. They are elevated but flat, making them an invisible target. They were originally planted with Penncross but now co-exist with poa Annua. The tees, like the greens, are small, averaging only 4,000 square feet and were originally planted with common Kentucky bluegrass as was the rest of the course. The course itself plays 2972 yards from the M.G.A. plates and is a Par 35. Without playing extremely long, the course can be very difficult as the creek and/or out of bounds areas exist on every hole.

The second nine, known as the Brooktree Golf Course, opened in 1976 and was leased by the City of Owatonna in 1978. The city finally purchased the second nine in 1981. The second nine was constructed on farmland and in contrast to the first nine holes is located just above the flood plain and is very wide open. The tees average over 6,000 square feet and were planted with the more improved varieties of bluegrass as were the fairways and roughs. The greens at the time of construction were planted with a variety of creeping bentgrass not known yet as Penneagle. These greens ten years after they were planted are still very pure. The greens average 5,874 square feet and are elevated at the back to face the golfer. The real hazard on the course is the pond between hole seventeen and eighteen which provide a challenging finish to an otherwise hit a way golf course of 3411 yards.

The two courses have been run as one eighteen hole course known as the Brooktree Municipal Golf Course since 1978. The contrasting courses make for interesting and diverse playing conditions. Because the two courses are completely separated, we have found it more efficient to have two people changing the cup and tee positions. This also allows us to spend more time patching divots on the smaller tees of the front nine. Our irrigation systems are also completely different and separate systems. Both systems are manual and are run one at a time as over watering is inevitable if they are run simultaneously.

To help make the greens of the two courses play more consistent we have been topdressing with a fifty percent sand mixture which is consistent with that of the back nine. We have also decided to cut back on the fertility of the more aggressive penneagle greens. They seem to develop an abundance of matty material that topdressing and aerifying is not by itself eliminating.

Some courses are designed with diversity throughout, but the Brooktree Municipal Golf Course markedly plays with diversity from one nine to the other. In adding up the differences between the nines, our maintenance aim is to maintain the small tees of the front nine and expand them when time permits and to make the greens play as consistent as possible.

NEW UTILITY TRUCKS ARE INTRODUCED

A new line of utility trucks designed to perform a wide variety of grounds maintenance service has been introduced by Jacobsen Division of Textron, Inc.

Two models unveiled in the line are the T1000 with a 1000 lb. capacity and the T2000 which has a capacity of up to 2000 lbs.

With attachments, the latter vehicle performs a variety of turf care tasks in addition to carrying personnel and hauling equipment and materials.

A four-wheel truck the T1000 is powered through an automatic-type transmission by a fuel- efficient Jacobsen air-cooled engine that will operate all day on its 6-gal. tank of gas. Riding on 71-in. wheelbase...
MISSING: Not Lost!

Pictured here is one Carl Tychsen. Carl has been associated with management of TURF SUPPLY COMPANY for 17 years. After 25 years in the AIR FORCE and supposed retirement, Carl joined Jack Kolb and his staff at Minneapolis Golf Club in 1967.

When TURF SUPPLY COMPANY was being formed, Carl gave his support and eventually joined as GOD FATHER to the fledgling company.

Suddenly during the opening of the 1984 fishing season he began missing long periods of work.

He has been seen around the Detroit Lakes area and recently sighted at the Forest Hills meeting in June.

Carl’s presence has helped TURF SUPPLY COMPANY tremendously and helped establish a reputation of caring even when he would rather be on the Links himself. Saturdays and holidays were days when he showed great empathy for the Golf Course Superintendent, and would rather run deliveries for the men who keep the “Greens” than to play his favorite pastime—GOLF!
with an overall length of 106-in., this
compact machine has a light print of only 8
psi, a desirable feature in turf work.
Though a light-weight, construction is
heavy duty, featuring a welded high-yield
tublar steel chassis and a diamond-plate
steel body and cargo box. The convenience
of an automatic transmission, a steering
wheel and simplified controls add to
operator control.

For more rigorous and varied duty, the
T2000 is powered by an 18 hp twin-cylinder
air-cooled Onan gas engine, moving the
three-wheel truck through a three-speed
transmission at speeds up to 22 mph. Nearly
six hours of continuous use are provided by
one 8.5 gal. tank of gas. In addition to
its 2000 lb. capacity, with 10-ply tires,
including operator and passenger, a variety
of optional attachments convert the T2000
into a multi-function system machine. With
optional hydraulic system, PTO drive or
high-low range charger, the T2000 can be a
mini dump truck with tailgate, aerator,
seeder, spreader, top dresser and several
kinds of sprayers. A boom assembly and hand
gun with 50-ft. hose can be added. The
124-in. long T2000 is built for heavy-duty
use with tubular steel frame and diamond
steel cargo box. Wide, six-ply standard
tires provide a light print on turf.

EDITOR’S CORNER

by DOUG MAHAL
Chairman
Editorial Committee

Would it be redundant to say June was a
little unusual this year? But then, this is
Minnesota-land of no normals! I've heard no
one wishing for rain. In fact, the contrary
is more frequent in conversation. The
moisture we've had has created some
spectacularly lush, green turf on
Minnesota's golf courses. I imagine the
soil will dry up just in time for the
weather to turn hot and dry. Well, that's
Minnesota and that's what M.G.C.S.A.
superintendents' manage as well as any
change!

If you missed the June meeting at Forest
Hills, you missed seeing a tremendous
drainage system effort on the part of the
club and Superintendent Lyle Olson. Without
seeing, it's hard to imagine what 55,000
feet of drainage system looks like. Thanks,
Lyle, for a great day and the visual
experience.

Many M.G.C.S.A. members missed out on the
first annual Green Industry Expo held at
Anoka Vo-Tech, Rum River Campus. Next to
the G.C.S.A.A. National Show, one is not
likely to see as much turf and related
equipment anywhere. I found it just a great
day to get down to "brass tacks" with some
of our distributors and actually get a
"hands on" look at the equipment and
supplies we and other related industries
use. For those superintendents who did
attend, it was a day for simple
commaradarie, a function lost since
beginning our noon meeting format. Plan to
attend in '85.

Our July picnic will again be held at Baker
Park on Lake Independence. The date is July
9. Arrangements Chairman Russ Adams has
something special and new planned in the
way of food. The price for your family will
be a little higher but it will be well
worth the expense. We all need a little
"time out" about that time of year. Come on
out and enjoy the day. Bring the family!

Many thanks to last month's HOLE NOTES
contributors, Gerry Murphy and Glen
Lentner. I've always said that our
membership has a lot of good information to
share and these fella's have proved it
again. Good job!

Effective July 1, 1984 a new law involving
golf courses goes into effect. I might
suggest you all get a copy of the "Employee
Right to Know" law and look it over.
Basically, the law requires employers to
post a list of all chemicals used on the
golf course including fertilizer.

Have a great July and take a little time to
get away and relax. See you on the 9th for
a great day at the lake.
For long-lasting disease control—from the tee, across the fairway, and on the green—nothing's on a par with CHIPCO® 26019 turf fungicide.

It protects turf from the major diseases: Helminthosporium Leaf Spot and Melting Out, Dollar Spot, Brown Patch, Fusarium Patch and Blight, and Pink and Grey Snow Mold.

And the protection lasts longer: 21 days on fine turf. Up to 28 days on fairways. Which means it's not only effective. It's cost-effective too—just 9¢ per 1,000 square feet per day of control.

For healthy turf and healthy savings, use CHIPCO 26019 fungicide. It goes the distance. Rhône-Poulenc Inc., Agrochemical Division, Monmouth Junction, NJ 08852.

The Yamaha Motor Corporation entered the gas and electric U.S. golf car market in 1979. Golf Car Midwest started in the golf car business at the same time as a Distributor for Western Wisconsin, Minnesota, North Dakota and South Dakota. The Burnsville Sports Center, parent company of Golf Car Midwest, became a Yamaha products dealer in 1969. Business keeps growing each year because Kermit Severson, the owner of Burnsville Sports Center and Golf Car Midwest, believes in developing repeat business by offering parts availability and service to his customers. The original golf car facility had to be expanded to accommodate a larger parts and service department in 1982.

In 1981 we further expanded our golf car business by distributing golf cars in eastern Wisconsin and northern Michigan. This distributorship is located in Madison, Wisconsin.

The majority of our business is the sale of new reconditioned golf cars; however, in 1982 we developed a line of utility vehicles. Utility vehicles are being sold to golf courses, resorts, housing projects and car dealerships.

This next spring we plan to further expand our market by offering a commuter car for use around resort and retirement areas.

NEW MEMBER REPORT
The following new members were accepted in June: Orville Hurt, Class A, Marshall Golf Club; Blas Brual, Class A, Pipestone Country Club; Mike Brual, Class D, Pipestone Country Club; James Johnson, Class BII, Little Crow Country Club; David Lohn, Class BII, Little Crow Country Club; Rick Koring, Class BII, Sundance Golf Club.

CLASSIFICATION CHANGE: James Krumwiede, Class B, Interlaken G.C., Fairmont.

"In this day and age, a golf course superintendent has to be an educated scientist, agronomist, an economist and a good people manager.

"If you put all this together with a love for a piece of earth, then you've got a good golf course superintendent."
