Ransomes® Greensplex™ II

**DESIGNED TO PERFORM**
- Exceptional quality of cut
- 11-blade reel with 0.187" clip
- Control clip rate by ground speed
- Automatic mow speed control
- Precision bedknife adjustment
- Optional large capacity quick-mount grass catchers
- Optional tournament bedknife
- Optional TPS™ hydraulic oil leak detection system
- Optional 3 wheel drive
- Optional individual front reel lock-out

**PRODUCTIVE**
- 62" cutting width
- 7.5-mph transport speed
- Hydrostatic drive standard
- Adjustable mowing speed control

**BUILT TO LAST**
- Fuel efficient, 18-hp Kohler gas or 18.8-hp Kubota diesel engine
- Engines meet 1995 CARB specifications
- Welded steel tubing construction
- Strong, durable polyethylene grass catchers

**EASY TO OPERATE**
- Power steering standard
- Fingertip controls
- Pedal operated 6" disc service and parking brakes
- Foot control pedal disengages reel drive system
- Easy removal of grass catchers
- Power backlapping

**DESIGNED FOR COMFORT**
- High-back contour seat with 5" fore/aft adjustment
- Adjustable height steering arm
- Optional armrests

**SERVICEABLE**
- Swing-out center reel
- Interchangeable cutting heads
- All components are easily accessible

The patented swing-out center reel provides easy access to all cutting units.

Education Committee

Acquiring a Fine List
Of Speakers for Conference

On behalf of our Association I would like to express our deepest sympathy to Mike Klatte and his family. Mike's wife passed away after battling cancer. Please keep Mike in your prayers.

Despite his loss, Mike and the Education Committee have been hard at work in acquiring speakers for the MTGF Conference in December.

The keynote speaker will be Mike Hurzdan on Wednesday morning. On Wednesday afternoon Mike will then speak on the “future need and development of golf courses.” Also scheduled for Wednesday is Bob Vavrek from the USGA.

Thursday's keynote speaker, John Wolf from 3M, will discuss new respirator regulations along with related environmental and personal safety issues related to our industries. Other Thursday speakers include Sharon Lily and John Ball speaking on golf course tree management and IPM. John Powell will speak on disease management of golf course turf. Dr. Watschke was asked to participate but cannot commit until the year 2000. The trade show will open on Thursday at 11:00 a.m.

On Thursday afternoon's agenda Jim Crum will give an update on variability of USGA sand content greens. He will also discuss topdressing issues related to sand characteristics and impact on the soil profile under greens.

Dave Allison may be the keynote speaker on Friday discussing employee/customer relations. Other concurrent educational sessions: Winter Cover Study and Growth Regulators; Ice Cover on Turf; Biostimulant Research and Results on Golf Course Turf, and an in depth session related to human resources presented by a local superintendent.

A “motivational” luncheon is being considered for Friday noon.

Even though all the speakers have not committed at this time, the program is coming together very well and should be of interest to everyone. I would like to thank Mike and his committee for the work that they have done to recruit a fine list of speakers.

The 1999/2000 budget was discussed at the last Board Meeting. Many of the accounts will not increase (or increase at a moderate level), but despite that fact we are faced with a budget that I believe will be in the red. This year's budget will fall about $1,000 short of breaking even and next year's budget may have a negative dollar amount if we do not increase dues. The final figures will not be known until May. At this time, the Board will need to make the decision for a raise in dues.

Condolences go out to the family and friends of Cliff Vohs, who recently died in Arizona. Cliff was a retired member of the MGCSA and was a former superintendent at St. Cloud Country Club. Cliff will be remembered for his unique command of the English language.

I hope everyone is having a good spring despite the cool weather.

— Thomas Fischer, CGCS
MGCSA President
About the Cover

For those who read the Charles Erickson story last month and wondered how horses were utilized — we present this photo from the archives of the National Mower Company — courtesy of Stan Kinkead.
The Respiratory Protection Standard

I. Evaluation of the Workplace
1. The employer shall identify and evaluate the respiratory hazards in the workplace.
2. This evaluation shall include a reasonable estimate of employee exposure to respiratory hazards and identification of the contaminant’s chemical state and physical form.
3. Where the employer cannot identify or reasonably estimate the employee exposure, the employer shall consider the atmosphere to be immediately dangerous to life or health.

II. Written Program
1. The employer shall establish and implement a written respiratory protection program with worksite-specific procedures. The program must include:
   A. Procedures for selecting respirators for the workplace.
   B. Medical evaluations for employees required to use respirators.
   C. Fit testing procedures for tight-fitting respirators.
   D. Procedures for proper use of respirators in routine and reasonable foreseeable emergency situations.
   E. Procedures and schedules for cleaning, disinfecting, storing, inspecting, repairing, discarding and otherwise maintaining respirators.
   F. Procedures to ensure adequate air quality, quantity and flow of breathing air for atmosphere-supplying respirators.
   G. Training of employees in the respiratory hazards to which they are potentially exposed during routine and emergency situations.
   H. Training of employees in the proper use of respirators, including putting on and removing them, any limitations on their use and their maintenance.
   I. Procedures for regularly evaluating the effectiveness of the program.

III. Medical Evaluation
The employer shall provide a medical evaluation to determine the employee’s ability to use a respirator before the employee is fit tested or required to use the respirator in the workplace.
1. The employer shall identify a physician or other licensed health care professional (PLHCP) to perform medical evaluations using a medical questionnaire or an initial medical examination that obtains the same information as the medical questionnaire. (Medical evaluation questionnaire — 29 CFR Appendix C to 1910.134: OSHA Respirator Medical Evaluation Questionnaire)
Introducing the New Top-Serviceable Rock Screen EAGLE™ Rotor.

Don't let sand, silt and harsh chemicals get the best of your rotors. Get the rugged durability and low maintenance of Rain Bird's most advanced line of rotors.

• The newly redesigned EAGLE™ gear drive rotors feature the Top-Serviceable Rock Screen/Integrated Valve Seat (patent pending) that allows you to remove debris and flush pipes without digging.

• A reinforced polypropylene case increases durability and offers resistance to 265 chemicals.

• The new performance nozzles improve water distribution.

Give yourself a fighting chance. Get the new EAGLE rotors and leave the dirty work to us.

Respiratory Protection Standard—
(Continued from Page 5)

7. In determining the employee’s ability to use a respirator, the employer shall:
   A. Obtain a written recommendation regarding the employee’s ability to use the respirator from the PLHCP which includes: (1) any limitations on respirator use including whether or not the employee is medically able to use the respirator, (2) the need, if any, for follow-up medical evaluations and (3) a statement that the PLHCP has provided the employee with a copy of the PLHCP’s written recommendation.
   B. Do not assign a task that requires the use of a respirator to an employee for whom the PLHCP has identified medical limitations.
   C. Provide additional medical examinations for employees already examined when reasonable and necessary (See 29 CFR 1910.134(e)).

IV. Testing

1. Before an employee may be required to use any respirator with a negative or positive pressure tight-fitting facepiece, the employee must be fit tested with the same make, model, style, and size of respirator that will be used. Fit test protocols can be found in 29 CFR Appendix A to 1910.134.

2. The employer shall ensure that an employee using a tight-fitting facepiece respirator is fit tested (1) prior to initial use of the respirator, (2) whenever a different respirator facepiece is used, (3) at least annually and (4) whenever visual observations of changes in the employee’s physical condition are reported that could affect respirator fit.

V. Training

The employer must ensure that each employee can demonstrate knowledge of at least the following:

1. Why the respirator is necessary and how improper fit, usage or maintenance can compromise the protective effect of the respirator.
2. What the limitations and capabilities of the respirator are.

RESPIRATORY PROTECTION TRAINING

Air Purifying Respirator Training Module

Materials needed:

- Air Purifying Respirators
- Cartridges
- Storage Bags
- Mild Soap and Water or Cleaner Sanitizer
- Slides, overheads or flip chart

This workshop assumes that all employees wearing respiratory protection have been examined and approved by a physician and a successful fit test has been completed.

The air purifying respirator works by the wearer inhaling air through the air-purifying cartridges. All the oxygen that the wearer receives comes through the cartridges. Since this device does not supply oxygen, it must be worn in environments containing adequate concentrations of oxygen (19.5% oxygen).

The user should leave contaminated environment immediately if:

1. Breathing becomes difficult.
2. Dizziness or other distress occurs.
3. You taste or smell the contaminant.

Never alter or modify your respirator. If your respirator needs modification, leave that to the manufacturer. Any alterations to the respirator can reduce its effectiveness, thus putting the wearer in danger.

Due to the dangers that respirators pose to the wearer, only individuals examined and approved by a physician and successfully fit tested should wear respirators. Respirators that have not been fit tested can endanger the wearer by allowing contaminated air to enter the breathing space through points where the face does not seal to the face piece.

Pesticide applicators using pesticides that require respiratory protection must use a cartridge approved for organic vapor removal plus a prefiltter approved for pesticides.

There are five inspection points that should be checked before donning the respirator.

(Continued on Page 9)
Heat, excessive rain, drought and humidity represent just some of the challenges that await you this season. Stock your arsenal with these as well as other quality products from North Star Turf Supply.
Respiratory Protection Standard—
(Continued from Page 7)

**Headbands:** Check to see that the headbands still have their elasticity. Inspect for breaks or tears in the material and make sure all clips, fasteners and adjusters are in place and working properly.

**Facepiece:** Check facepiece for dirt, cracks, tears or holes. Inspect the shape of the facepiece for possible distortion that may occur from improper storage and make sure the rubber is flexible, not stiff. Also check aluminum yoke for cracks.

**Inhalation and exhalation valves:** Check for cracks, tears, distortion, dirt or build-up of material between valve and valve seat.

**Cartridge holders:** Check to make sure gaskets are in place and check for cracks and damage to threads.

**Cartridges and filters:** Make sure cartridges and filters are clean. Never try to clean a filter or cartridge by washing it or using compressed air. Inspect cartridges for dents, scratches or other damage, particularly metal sealing bead around the bottom.

Fill out an Inspection Record after each inspection. This record requires date of inspection, any findings and signature.

**Assembling the Respirator**

Thread cartridges into receptacles carefully. Hand tighten to prevent damage to threads, to insure a good seal against the gaskets, tighten each cartridge by gripping as much of the circumference of the receptacle as possible and then slowly turning the cartridge until tight. Insert the appropriate filter into the appropriate filter cover. Never load filters into the receptacle. Snap filter covers on to both receptacles or cartridges taking care not to damage filters.

**Fitting the Respirator**

Fit facepiece on nose bridge making sure that you are able to breath through nose. Then swing bottom of facepiece into contact with the chin.

When using elastic or rubber headbands, position headbands with longest straps above the ears and over the crown of the head. Position the headbands with the shortest straps below the ears and around the nape of the neck.

Adjust the straps for a comfortable fit by moving the adjustment slides to lengthen or shorten straps. Adjust the straps just snug enough so that no air leaks around the facepiece. It is not necessary to pull the straps so tight that the respirator digs into the face.

**Test for Tightness**

Test respirator for leakage using a positive pressure method. Lightly place palm over exhalation valve cover. Gently exhale. A slight positive pressure should build up inside the respirator. If any leakage is detected around the facial seal, readjust the head harness straps and repeat test until there is no leakage. If other than facial seal leakage is detected, the condition must be investigated and correct-

A negative pressure test may also be performed. Lightly place palms over cartridges or filter holders. Gently inhale and the facepiece should collapse against the face. The respirator must pass the tightness tests each time before the respirator is used. The respirator will not furnish protection unless all inhaled air is drawn through suitable cartridges or filters.

**Cleaning the Respirator**

Make a solution of mild soap and water or cleaner sanitizer designed for respirators. Never use alcohol on respirators because it dries the rubber. Immerse respirator in the solution and scrub gently with a soft brush until clean. Take care to clean the exhalation valve in the facepiece and all other parts that exhaled air contacts. Rinse in plain warm water (about 120 degrees). Allow respirator to air dry. Never use heat lamps, heaters or allow to sun dry. This can distort the shape of the respirator. Clean the respirator after very use!

Store the clean, dry respirator in a large, zip-lock plastic bag. Hang the bag rather than allowing the respirator to contact a surface that can change the shape of the respirator. Also, protect the respirator against dust, sunlight, heat, extreme cold, excessive moisture and damaging chemicals.

Century offers the complete line of Legacy Golf products to help you control water, labor and energy costs. Featuring Legacy rotors, valves, Genesis central satellite and Viking decoder control systems.

Legacy Golf System

SyncroFlo, Inc.
Efficient and economical. SyncroFlo pumping stations are the solution to many golf course irrigation problems.

SyncroFlo Eagle Pumps

BoardTronics™
Repair or upgrade your Rain Bird or Toro golf controllers. Replacement boards can be shipped from the Century National Service Center within 24 hours. Call 888-855-9132.

Controller Board Repairs

Aqua Master Fountains
Improve water quality with an aeration fountain, or create water features from existing golf course streams and ponds.

A Successful Season... Starts with Century Golf Course Services

An inviting, well-maintained course means challenging play...and a profitable season. As a golf superintendent, you can achieve this success with Century Golf Course Services. Century's team of professionals can help you solve irrigation or drainage problems and show you what's new in clubhouse lighting, water features and more. Call today for a free catalog and on-site consultation.
