Precisely Blended Soils

Delivered or Mixed On-site

As the Midwest's leading golf course supplier, consistent product quality is critical. We carry a full line of topdressing sands and mixes containing top-grade Minnesota peat. For special needs such as increasing CEC ratio, we custom blend topdressing with fertilizer or humates using our computerized Accublender™.

Call our technical service team for soil testing or soil mix recommendations. Visit our website to view the full product offering.

THE SOIL EXPERTS.

Hole Notes (ISSN 108-27994) is digitally published monthly except bimonthly in November/December and January/February by the Minnesota Golf Course Superintendents’ Association, 10050 204th Street North, Forest Lake, MN 55025. Jack MacKenzie CGCS publisher. Please send any address changes, articles for publication, advertising and concerns to jack@mgcsa.org.
Well, it is now late October. Many of us are winding down on the 2013 golf season. I hope it was a successful year for you and your respective clubs. In some ways it feels like we just opened up for the season yet, in others, it seems like opening day was two years ago! I guess when you are busy, things seem to just march along at a quicker pace than one realizes. I will leave it to you to decide if that is a good thing or just the opposite.

A ton of things have occurred in the last month or so. Jack MacKenzie, Erin McManus and myself traveled to Fargo, ND to visit with the North Dakota superintendent’s group. They are very interested in having some recognition at the national level. Unfortunately, they do not have the required numbers of Class A and SM members to meet the GCSAA’s requirements for affiliation. They asked about the possibility of joining with us to have that voice nationally. After some careful consideration, the Board of Directors have decided this can be a win/win. The North Dakota superintendents have the voice nationally, yet retain their identity. We gain members and that directly boils down to more research dollars to the UMN for member driven research. To that end, a letter has been sent to the North Dakota Representative Aaron Porter, Superintendent at Fargo Country Club, offering our position in the merger and a place to be heard nationally. Obviously, this is an ongoing collaboration. An update will be forthcoming when we hear back from our friends in North Dakota.

The Environmental Stewardship Committee is gaining some traction with local and state authorities. John Jaschke, Executive Director of the Minnesota Board of Water and Soil Resources, is taking up our cause and will help facilitate us meeting our goals. John’s thoughts are to:

1) Re-package the existing industry MGCSA Water Stewardship Guidelines to be all encompassing and include water, nutrient and pesticide management as well
as any other environmental concerns.

2) Align agency and industry connections to the golf/turf management work going on at the UMN.

3) Evaluate the development of a comprehensive certification program where by participating golf destinations could get greater water use predictability in exchange for dedicated stewardship efforts.

As water and water quality issues are becoming more and more scrutinized, this is our chance to lead the cart not be dragged down behind it…..or worse, run over by it.

Speaking of water quality, the MPCA issued a news release dated October 8 titled: MPCA water quality report for Mississippi River- Twin Cities shows need for improvement. I had mentioned in a monthly column some time ago that I heard some grumblings at the annual GCSAA Government Relations meeting that the Mississippi River would be the next water system to be the target of a clean-up effort similar to that of the Chesapeake Bay. Here we are. If you would like to read the monitoring and assessment report please go to the MPCA’s Mississippi River-Twin Cities Watershed webpage: www.pca.state.mn.us/ktqhda9.

It is important for you to understand that this is but one of 80 evaluations being developed in the next 10 years for all of Minnesota’s major watersheds. Without a doubt, this will not be the last we hear or see of this.

Please enjoy the last days of semi-warmth. Best of luck getting the leaf clean-up done, blow-outs completed, snow mold applications down and covers on. The light at the end of the tunnel (2013) is just starting to shine.

Cheers!
Debris Equipment
- Clean turf and hard surfaces quickly and easily
- Clear cores, grass clippings, leaves, sand, thatch and more
- High productivity providing significant labor savings

Debris Blowers
Choose the debris blower that best fits your particular job requirements, applications and operational needs. The Pro Force™ is an engine driven unit that is towed behind a utility vehicle, and it provides tremendous debris clearing air power for maximum productivity and efficiency. The Debris Blower 500 is a tractor pulled PTO driven model.

Sweepers and Vacuums
Choose from the hydraulically driven Pro Sweep™, the engine powered Rake-O-Vac®, or the PTO driven Versa-Vac™ tractor pulled units for large volume capacity organic debris collection.

This year at the 2013 Wee One Tournament, players and Affiliate sponsors generated $21,000 which was contributed to the Wee One Foundation. Thank you supporters!
It has been just under two years since retiring from my post as a superintendent and I am often asked the simple, yet complex, question: “Do you miss it?”

Equally simple and complex, my answer: “No, to the concrete realities and yes, to the romance of running a course.”

There once was a time when I saw myself as a golf course superintendent until the day I retired. The challenges of providing optimum playing conditions through inclement weather, increased expectations, economic depressions and political posturing were at once stimulating and rewarding to conquer. Time as the ‘keeper of the green’ upon several courses provided life long lessons never to be forgot.

As hard as I tried in my youth I couldn’t change the weather and finally learned to accept the seasonal patterns and dramatic anomalies as par for the course. Buy good rain gear, use sun block and don’t skimp on winter coveralls tended to be a safe mantra for many years, as I stayed comfortable in the elements. But do I miss the weather variables?

Nope. It was almost always too wet or dry, hot or cold, icy or draughty, windy or humid. I find I do well inside my climate controlled office.

Back in the old days, course management was pretty simple. Hire enough people during the peak season to get the job done. Expectations were lower and the occasional impact upon play the norm. Shoulder month maintenance? Highly unlikely as most players understood the course was pimped up for the prime months of June, July and August when ‘snow birds’ were in town, kids were out of school and scheduled tournaments ran between Memorial and Labor Days.

That changed during the economic boom of the 1990’s. Greater incomes meant more free time and much more disposable cash. Combined, this led to higher demands upon the golf clubs that led to higher dues/fees that led to greater expectations. Greater expectations required more staffing, equipment maintenance and a much higher degree of management. Of course, all of this possible with enough cash.

Then the economic hard times took hold and it was suddenly do more with less followed by more of the same.
