Hole Notes (ISSN 108-27994) is digitally published monthly except bimonthly in November/December and January/February by the Minnesota Golf Course Superintendents’ Association, 10050 204th Street North, Forest Lake, MN 55025. Jack MacKenzie CGCS publisher. Please send any address changes, articles for publication, advertising and concerns to jack@mgcsa.org.
Recently, I was privileged to join our Executive Director, Jack MacKenzie, for a tour of the T.R.O.E. Center with Dr. Brian Horgan and Dr. Eric Watkins. In addition, we were treated to a discussion about the proposed project at Les Bolstad Golf Course on the U of M campus. I am convinced, now more than ever, that these two facilities hold the future for turf research here in Minnesota.

The proposed project for Les Bolstad Golf Course will be a model for restoration and renovation projects for golf courses in the future. The concept of the re-design is to provide an example of how to renovate courses using three components of sustainability to insure the long term success of the facility. Those components are agronomic, economic and environmental principles and procedures that will culminate in a comprehensive business model for success. In addition, there will be a demonstration area for ongoing research projects that will provide valuable information for superintendents complimenting the work going on at the T.R.O.E. Center. MGCSA supports this project because it will provide beneficial case studies for courses interested in renovation projects now, and in the future. It will also provide crucial information for golf course architects and golf course construction companies for renovation projects they will be involved with in the future. Owners, club officials, general managers and golf professionals who are at courses considering a renovation project will also benefit from information related to how to manage the economic sustainability of their facilities during and after the project. To learn more about the Science of the Green project, visit the website at www.scienceofthegreen.org.

We also had the pleasure of touring the T.R.O.E. Center to see all the work and research that is...
currently in process with the U of M. I can tell you this is not the same T.R.O.E. Center I was on at the last field day—far from it. As we were treated to a discussion of the various research projects and breeding efforts, it very quickly became apparent to me that MGCSA members needed to see what we were seeing. From the run off/nitrogen fate study, to the rain shelter and drought resistance research, to the fine fescue breeding, to the bentgrass research plots, to the MGCSA Member Driven Research initiatives, my reaction was nothing short of “I had no idea!”. Many of you know that the Field Day was replaced last year with a number of virtual field days produced by Dr. Horgan, Sam Bauer, Eric Watkins and others that were very informative and convenient because you could watch them anytime or anywhere you had internet access. We will certainly see more of those presentations in the future. This year the Field Day returns with a vigor that you can only experience if you go. We were promised that the Field Day this year “is not your father’s Field Day,” with the change being in the traditional tours that will provide more opportunity for discussion and interaction. There is so much to see that you really can’t afford to miss it this year and you also will be able to hear more about the Science of the Green project. So mark your calendars and clear your schedules for Thursday, August 7 and watch for more information to come from the MGCSA on the details. It is going to be a special day and I hope to see you there!!!
Proven Flex Suspension (Patented)
Superior contour following capability utilizes an integrated "Flex" linkage system to allow cutting units to pivot around the center of the front roller to master undulations and prevent side-to-side scrubbing of the putting surface.

Precision Cut
Select from a broad product offering to customize for your desired quality of cut. The smooth drums are gentle on greens. Choose the correct clip with the optional Clip Kit.

Ergonomic Loop Handle Design
Ergonomic handles make mowing comfortable for a wide range of operators. The 3-position pull pin height adjustment for the handle allows operator to quickly adjust handle for their comfort without a technician's assistance.

Easy Reel to Bedknife Adjustment
The "click type" adjustment makes the reel to bedknife adjustment easy and most accurate. Prevents misadjustment while tightening counter nut, as on competitive mowers.

Forward Weight Bias
Provides straight tracking of the mower and reduces the operator's influence on the quality of cut. The forward weight bias enhances the mower penetration into the turf.

Grass Baskets
Engineered for mowing performance, the grass baskets distribute clippings evenly for optimal mowing on each pass, in wet or dry conditions.

Easy To Service
Designed for dependable and easy access to all service points.

Many Accessories
Toro offers many Roller Options, Roller Extensions, Clip Kit, Groomer, Groomer Brush, Scrapers, Bedknives and more.

“Hurry up and wait.”

Perhaps my greatest fault, at least from my perspective, is my inability to maintain patience. Although not quick to become angry, my frustration level can be accelerated if I do not focus upon patience, especially when working in the bureaucracy of the public arena.

As a golf course superintendent in the private sector with somewhat autonomous management, I could appreciate a challenge, create a solution and put the remedy into place quickly and confidently…of course taking budgetary and time limitations into account. However, when working with the state and national governments, “fast-tracking,” which is a really good idea, just doesn’t happen much and likely ever on my timetable.

It isn’t that progress can’t be made through enlisting the aide of state agencies, forging relationships and promotion of ideas. Rather, it just takes a lot of time and I need to temper my expectations, realizing that the operational pace is intentionally slow to fully vet the proposal with all involved stakeholders. Their constituents always scrutinize state agency actions.

Under the direction of the Board of Directors, shortly after becoming your Executive Director, I placed emphasis upon existing opportunities and relationships with our state agencies in an effort to promote the good story of our industry and pursue support for our environmental stewardship initiatives. For the first year and a half, the attention we received was topical and didn’t carry the emphasis I had anticipated, especially considering the energy we were putting into our self-promotional campaign. Last year, the Minnesota Bureau of Water and Soil Resources picked up our initiative with great enthusiasm.
