PRESIDENT’S MESSAGE

Summer Rules

For me, this has been a dilly of a summer. You noticed the dry spell, the little wet spell, and the hot humid spell? A suffering golfer asked me “what happened to the greens?” At this writing, I have two greens in a fearsome battle with goose grass, one green suffering from draught damage and four greens are thin from flood.

By the first of September I should see my turf situation greatly improved, but my members will recall only that it was another bad summer. As I look back, I have never had a good summer in the past 15. What is my problem? Could it be management, air or water drainage, poor construction, grass variety, what? Maybe I should just close during the summer. None of these offer a good solution, but if I could regulate the weather, at least I wouldn’t have to close during the summer.

We won’t close and you all are doing a spartan job “Keeping the Green;” it is just that your president has the summer blues. So let me apologize as your president for displaying some patches of brown grass, and whoever has the solution to my Summer Blues, please step forward.

Bob Milligan

Editors note: Don’t worry about it Bob. You haven’t got a monopoly on having brown grass this summer, believe me! Come over and I’ll show you!

NEXT MEETING

The September meeting of the MAGCSA will be held on Tuesday, Sept. 9 at the Cavalier CC in New Castle, Delaware. This will be a joint meeting with the Philadelphia group.

Our host is Arthur Menard, super at the club since 1965. Arthur served five years in the Coast Artillery during WW II. He served his apprenticeship under Paul Weldion Sr. at Rock Manor Club and when Mr. Weldion retired, he took over as super there, spending a total of 15 years at that one club. Arthur has two sons who both work for him.

Cavalier was designed and built by Russel Roberts in 1960.

Golf will be played after noon with the dinner meeting following as usual.

DIRECTIONS TO THE CLUB

Go north on Rt. 95 which is Delaware Turnpike to Churchmans Road. Turn right and cross the cement bridge, turn right again, and go about 500 yards to the clubhouse.

MEETING PLACES

Oct. 14 — Woodmont CC in Rockville, Md. Ladies will be welcome to attend this meeting. Host Bob Shields.

Nov. 10 — Burning Tree CC. Meal and business meeting will be held elsewhere. Place to be announced. Host Richard Anderson.

Dec. 9 — Indian Spring CC. This will be our annual election meeting. Host Ed Dembnicki.

JOB OPENING

Sparrows Point CC in Baltimore is looking for an assistant superintendent. Good salary plus fringe benefits. All applicants must have college education in turf management or related fields. Marital status can be married or single but military obligation must be fulfilled. For further information, contact Alex Watson, Golf Course Superintendent, Box 6650, Sparrows Point Country Club, Baltimore, Md. 20014.

NEW POSITION

Dick Silvar from Baltimore notifies us that Bob Orazi has resigned as the assistant superintendent at Sparrows Point CC to accept the position as superintendent in charge of construction for the new Valley Hunt and Golf Club in Phoenix, Md. Ground has been broken and the target date for the opening of the 18 holes is set for July 1, 1970. Bob was Al Watson’s assistant for 2 1/2 years. Prior to that he was working as superintendent of seeding for the Colonial Gardens Golf Course.
Construction Company. Good luck Bob, we wish you continued success.

UNDER THE WEATHER

Word reaches us that Ruth Milligan has been in the hospital for nearly two months. President Bob says it wasn't anything too serious and that she is home now and feeling much better. Bob also sends his thanks for the flowers and concern from the association.

Also heard the moustached super from Westwood CC in Vienna, Jack McClenahan, has been attacked by his arch enemy, his bleeding ulcer. Jack was in the hospital for five days and seriously has had a real ten rounder with it. At any rate, he is back on the job again. What? Me worry?

ACCIDENTS CAN HAPPEN — BE PREPARED

Last month we reviewed two items from the May issue of the Golf Journal concerning first aid on the golf course. We will now look at two more of the more common accidents which do occur frequently on the links.

Problem — Heart Attacks

Heart attacks are becoming more frequent each year. The layman usually hits the panic button, and many times the person having the attack is not helped too much before he is seen by the physician.

First aid care of heart attack cases is quite easy to determine simply by watching how the victim acts and then helping him. First, if he is in pain (usually pain in the chest and left side, sometimes down the arm) he should be kept quiet. Let him lie down if he can do so comfortably.

If he has medication, help him take it and watch very closely to see that he can breathe easily.

Sometimes the victim is stricken quite suddenly. He may fall, or seem to faint. Be certain to watch his color. If he begins to turn blue, watch his breathing. If breathing should stop, administer artificial respiration until a doctor arrives.

Problem — Sprains

Sprains are usually injuries to joints. A turned ankle, elbow or wrist will swell very rapidly and will be painful and extremely uncomfortable. Cold applications should be administered immediately, and the victim should rest.

If there is any doubt about a sprain, it should be treated as a fracture until a physician can see it.
Elevation of the injured member will usually reduce the swelling and pain.

Many times I have wished that there were more ways to reach people with the message that is in the Red Cross first aid textbook, particularly in the case where I saw about 20 adults standing by while a youngster who had been injured in an accident lay quietly bleeding.

We got there in time. A handkerchief and a little pressure in the right place for about three minutes controlled the bleeding.

We are our brothers keepers, so I keep on in my way trying to prevent people from killing themselves. It is my hope that we keep golf a game in which all of us can say that we do, (and can), take care of ourselves.

LADIES NIGHT REVIEW

Our annual Ladies Night was held on July 30 at Shady Grove and was a great success. Paul Barefoot, event chairman, reported that we had 125 people attending. The cocktail hour and the meal were at the Washingtonian, then we trekked over to see the Jack Benny Show with Shani Wallis, female star of “Oliver.” The show was excellent, and it was a very enjoyable evening.

SUPPLIERS – THE LADIES THANK YOU !!!

Due to the fact that we had such excellent response from the commercial men from our association the annual Ladies’ Night was a financial as well as social success.

ODDS & ENDS

In the GCSA Newsletter of New England, editor Gerry Finn reports that chinch bug is now giving supers there some of the headaches we “rebels” here in the south have been plagued with for years in our own area. From all indications it sounds as though the entire country has suffered from the Mid-Atlantic diseases and insects this summer. Now maybe the rest of the world

INDUSTRY NEWS

There is a company in upstate New York called Mowbot who is presently producing a “lawn mower with a brain.” It is battery operated, cuts around all obstacles, is noise and odor free, and is completely safe. So safe, in fact, that “if the Mowbot should make contact with an object such as a toy or the family pet, which may be in its path, it will stop immediately. A device built into the rubber bumper which surrounds the sturdy plastic housing automatically stops Mowbot until it is restarted manually.”

The machine is on the same principle as a rotary shaver, according to their brochure, with two counter rotating cutter discs, with retractable blades for low speed cutting.

And something else that might be of interest, “Expert horticulturists have proven random cutting, compared to routine patterns, produces healthier lawns. Mowbot...
Keeping Up to Par

As Golfers Proliferate, Maintenance of Courses Gets More Demanding

by John A. Prestbo
Staff Reporter of The Wall Street Journal

Tuesday, July 15, 1969

Chicago—If your once lush green lawn is now turning brown (and your wife is nagging you to do something about it), take some tips from an expert grass grower:

Your problem might be one of 40 common turf diseases, which Oscar L. Miles of south suburban Chicago is always looking closely for. This year he plans to spray his grass with mixtures of fungicides totaling 4,925 pounds of expensive chemicals.

Or maybe your browsing lawn needs more water. Each summer Mr. Miles irrigates his grass with about 31 million gallons, pumped through a 10-mile network of pipes and sprinklers.

Of course, he tends a bit more turf than the average weekend gardener. Mr. Miles is superintendent of two 18-hole golf courses at Olympia Fields Country Club.

He's one of the nation's estimated 5,500 golf course superintendents, whose jobs are part agronomy and part aggravation. Their bosses are dedicated golfers whose own lawns at home could be a tangle of dandelions but who rage if their bobbled putts can be even remotely blamed on a stray blade of grass.

A Chance Remark

Each year many superintendents have their reputations put on the line when their clubs host major tournaments. Then, a chance comment to a sports reporter by a disgruntled pro ("I would've broke par if the greens weren't in such lousy condition") could give their handiwork a nationwide bad press oversight.

Golf course superintendents are expected to raise laboratory-quality grass under battlefield conditions," says Ben J. Chlevin, executive director of the superintendents national association. This year some 11 million American golfers, nearly 30% more than five years ago, will tramp around 9,615 golf courses (many smaller, publicly owned courses can't afford a full-time superintendent, which explains why there are fewer superintendents than courses). The golfers will chew up the turf with their spikes shoes and dig it up with their clubs.

To cope with the punishment their grass must take, superintendents have become a highly specialized, professional group. Twenty years ago, when golf wasn't the national craze it is now, superintendents were called greens-keepers, were paid meagerly and had no formal training. Some of them came from farms, while others drifted into the work because they had a green thumb.

A Costly Crop

Today, superintendents are entrusted with growing what's probably the nation's most expensive crop. Many plush country clubs sprawl over land worth $50,000 or more an acre and in metropolitan areas such as Chicago their superintendents spend upwards of $100,000 a year to maintain each 18-hole course.

With this kind of money at stake, golf clubs aren't hiring amateurs anymore. Many plump country clubs swatvrp over land worth $50,000 or more an acre and in metropolitan areas such as Chicago their superintendents spend upwards of $100,000 a year to maintain each 18-hole course.

With this kind of money at stake, golf clubs aren't hiring amateurs anymore. Many plump country clubs sprawl over land worth $50,000 or more an acre and in metropolitan areas such as Chicago their superintendents spend upwards of $100,000 a year to maintain each 18-hole course.

The new breed of superintendent works with soil tests and chemical analyses instead of intuition. Some are even feeding soil conditions into computers to help determine how much water and what kind of fertilizer to apply and when. Top superintendents are paid up to $23,000 a year, and some are provided free housing on their course.

A livid board of directors threatened to fire Mr. Harris, but he proved with soil tests it wasn't his fault. After a long period of litigation involving the fertilizer company and other suppliers, the club was reimbursed for the damage. Meanwhile, it took six months to rebuild the greens.

Then in December of the same year, a mammoth storage tank on a neighboring oil tank farm sprang a leak and sent about 200,000 barrels of crude oil gushing into the five Los Coyotes fairways. The oil company resolved the course, but with soil that had such a high saline content it took Mr. Harris a year to restore the fairways to normal.

The worst of Mr. Miles' 380 acres of manicured greens is people's feet. He can control the damage caused by members on only 50,000 rounds a year, but tournaments are major headaches. Last August 80,000 spectators flocked on Olympia Fields' north course for the annual four-day Western Open, and Mr. Miles knew the milling throng, many with spiked shoes on, would trample his grass to death.

Replanting it all after the tournament would take time and interrupt members' play. But Mr. Miles came up with a solution. After the first day of the tournament, he had his men spread grass seed along the crowd's traffic patterns. "The spectators spiked the seed into the ground for me, and all I had to do was water it," recalls Mr. Miles. "Three weeks after the tournament you wouldn't know we had anybody here."

Working with nature is the easiest part of their jobs, the superintendents agree. It's getting along with the club members that can be a strain, which is why some superintendents dream of occasional little extras as public relations efforts. On ladies' day at Sunset Country Club in St. Louis for example, superintendent Robert V. Mitchell sets out ported geraniums at the tees and marks the cups on each green with flags holding pink flags trimmed in black lace.

It helps to have a tight rein on temps, too. One recent Fourth of July the Danville, Ill., Country Club brought in some ponies for members' children to ride. That night somebody tied one pony to the flag on a green. When James W. Brandt, the superintendent, arrived at work the following morning he found the tethered pony had worn a trench in the green by circling the pole all night.

The bad luck award, however, seems to have been permanently retired by Fred Harris, superintendent of the 27-hole Los Coyotes Country Club near Los Angeles. In October 1964, he bought some fertilizer and told his men to put it on a few greens. Unfortunately, when the stuff had been packaged, soil sterilants somehow were mixed in with the nutrients, and every blade of grass on four greens promptly withered and died.
roams freely within the pre-determined area, cutting the lawn and mowing around all obstacles in a completely random fashion."

If you’re interested, the machine costs $875 and the address is available from the editor if you want to order three or four.

FROM THE EDITOR

What! More talk about budgets? You better believe it! Only this month the editorial attempts to answer some questions and offer a personal solution to this annual crap about “why is the operating budget at Duck River higher or lower than our budget?” This question is asked of each super at least once each year by an “interested member.” The answer is obvious, but these people can’t see the solution no matter how clear it may be. Regardless of what anyone says, club budgets, for any committee at any club cannot be in competition with those of other clubs.

Members like to compare their club with other clubs which is fine. Except for one rather obvious thing. Clubs are not in competition with each other – they are in competition with drive-ins, hotels, and any other eating places in the same close area where they are located. By the same token, no golf course budget can be compared across the board with any other club. There are too many variables to be included in every budget and on every course. The amount in each club’s budget is directly dependent on items such as: the income of the club, the availability of funds specifically for the golf course, the demands of the golfers, the age and condition of the golf course, the initiative and ability of the superintendent, and many others.

There are as many variables within the operating budget as well. Some clubs include such things as the pro’s salary, manager’s salary, areas of new equipment, land repairs, club house operating expense and a variety of other items which have no business being in there but in actuality tend to cause concern to the uninformed member who is making his own cost and operating analysis.

There has been thought and talk by the editor and others of drafting a standardized budget form to be drafted and put in the hands of willing and cooperative supers not only in our own area, but across the nation, if this is possible. Critics are skeptical of this plan, saying it can’t be done because everyone has his own set of budget figures and categories where each amount is set up and worked from. But contention by the editor is that it can be done, mainly because people have said it can’t be. A negative attitude is an open challenge and with the cooperation of our area supers, this standard budget form will soon be a reality.

Advocation that the club adapt their budgets to suit...
this form is not the idea. They could if they desired
do so, but the main thought behind the idea is for the
form to be an all inclusive, not too detailed list of all
possible categories where golf course supers are spending
their club’s money. Then in filling out the form, if one
super finds an area on the form that does not apply to
his operation, he simply marks it to show it is not
applicable or simply leaves the space blank. On
completion, these forms will be sent to the Mid-Atlantic
Newsletter editor for review and analysis. They need not
be signed and will be kept anonymous if the super
and/or the club desires.

Adoption and utilization of this plan would be a great
benefit to all supers as they prepare and carry out their
budgets. It would eliminate the ever-present doubt by a
few club members that “we may be being taken for a
ride” when they hear of a budget that may be lower
than theirs.

Ideas and opinions, both pro and con, are welcome as
usual. But at any rate, once again we can see that facts
and figures may become a real help for the super.

SPECIAL FEATURE

Included in the Newsletter this month is a copy of an
article which appeared on the front page of The Wall
Street Journal on July 15. The article was well done and
supers from all areas had members remarking to them
about it. The article was mainly due to the efforts of the
Buchen Public Relations firm whom the GCSAA had
retained a few years ago. But after the article was
printed, a letter comes to our attention stating that the
Buchen firm is no longer being retained by our National
association. Details are lacking, but it does seem a shame
after such a fine article and all the favorable comment
and sudden awareness on the part of a great number of
club members all over the country that this will be the
last attempt on their part. Hopefully, this article can be
used in conjunction with budget preparations to
implement increases in wages, but if nothing more comes
of it, at least many people have been made aware of
problems that exist all over the entire country.
Incidentally, Oscar Miles is one of Dr. Joe Duich’s two
year turf graduates from Penn State.

BOARD MEETING

The Board of Directors held a meeting on Aug. 11 at
Gunpowder CC. One of the items discussed was
concerning a joint meeting between V.P.I. and the
University of Md. Director Lee Dieter will act as the
liaison between the two groups and will investigate the
possibility at the V.P.I. Field Days to be held in
September. Support for this conference ran high among
the directors and it is felt that this will be the consensus
of our members.

Bob Shields, past National President, discussed the
proposed plan for superintendent certification as
submitted in temporary form to members of the new
committee to review this. The only comment that was
made by the board was that they felt that the local
chapter should have more to say and do with the
verification of the applicants than is presently described
in the program.

MEMBERSHIP APPLICATION

Application for membership was reviewed for Donald
Hendrie, present superintendent at the Annapolis Road
G&CC in Annapolis, Md. He is applying for a class E
memberhsip and was sponsored by Jack McBride and
George Thompson.

As with any membership application, unless written
objection is received to an application within 30 days
after publication, the applicant automatically becomes
an active member.

SURVEY

As the Board Meeting, the board approved re-activation of the Superintendent Survey which we did
over two years ago. Denny McCammon will be handling
this project as well as the confidential budget survey
already discussed in the Editorial.

Both of these surveys will be held in confidence and club names will not even need to be put on the paper. Cooperation is asked, however, because the only person you hurt by not going along with this is yourself. Details will be forthcoming in a month or two.

POA ANNUA RENOVATION

Since this is the time of the year when POA annua usually looks its worst and the golfing membership is hanging us in effigy for having such a lousy playing turf, it is fitting that one man's program for poa annua renovation is outlined. This man is Robert E. Kapherr, Superintendent of Ridgewood Country Club in Paramus, N.J., past president of the New Jersey Golf Course Superintendents Association and the father of my wife.

Ridgewood Country Club is a 27 hole private golf club in operation since the early 1900's, composed mostly of POA annua on tees, and fairways. The program for renovation was approved in 1967 and nine holes on the West course were selected to be completed first. Initially, it was planned to renovate the West course in 1967, the center in 1968, and the east in 1969. Because of dissentment from a portion of the membership, the renovation of the center course, to be undertaken in 1968, was postponed until this year. At this writing, the renovation of the center course is in progress. The nine holes worked on were taken out of play for the complete duration of the program, August 1967 to late spring 1968.

The renovation program was based on the use of Sodium Arsenite, using a total of 90 pounds of actual material per acre in three applications. The fairways and tees only were renovated with this method; they contained a population of 96% POA annua when the program started. The fairways were sprayed with a 21 foot boom on a 20 gallon per minute Bean sprayer. The tees were sprayed with a Hawk boom sprayer. The renovation operation took three weeks to perform and required the services of six employees.

The First Burn was made on Aug. 1, 1967 using 40 pounds actual Sodium Arsenite with a minimum of 50 gallons of water per acre. Approximately five days later, when the burn results were complete, the turf was aerothatched in one direction with two units, swept with two Rogers 720E sweepers to remove the debris, fertilized with two pounds of 10-10-10 per 1000 square feet and watered in thoroughly. Two days after the fertilizer was applied, the Second Burn was initiated, using 30 pounds of actual Sodium Arsenite per acre. Four days after this application, the turf was aerothatched in the opposite direction, swept, fertilized with two pounds of Nitrogen from Urea Formaldehyde per 1000 square feet and again watered. Three days later, the Third Burn was applied, using 20 pounds of Sodium Arsenite per acre. The next day, the fairways and tees were aerified once over with West Point units equipped with hydraulic lift, to prevent ripping of the turf on the turns. The turf was again aerothatched in a direction other than the first two, seeded to 20% Penncross, 20% Seaside, and 60% Astoria Certified Bentgrasses at 70-80 pounds per acre. When the turf was dry, an eight foot dragmat was drawn in two directions. The turf was then swept with the brushes set to barely touch the ground to pick up the rolls of thatch. The seed was not picked up with the brushes set in this manner. The turf was then rolled to firm the soil and watered until germination occurred. During the renovation eight feet of the bordering rough areas was submitted to the same operation with the exception of the seeding, this was to a bluegrass, fescue mixture.

The results of the seeding were very gratifying after all the work that went into the three week project. I, personally, inspected the nine holes renovated in October of 1967 and was amazed at the catch of bentgrass. Another superintendent in the Mid-Atlantic area also viewed the results that fall, Ed Dembnicki, of Indian Spring Country Club. Ed also has an interest in Ridgewood Country Club, his brother is Head Golf Professional.

The follow up program which Bob Kapherr has instituted to keep the POA annua from gaining a foothold again is by using Tri Calcium Arsenate. In early April, 1968, when weather permitted, Chip Cal was applied at 5-6 pounds per 1000 square feet. His
fertilization program contains no phosphorus in a 20-0-10 mixture. Four to four and one half pounds of Nitrogen per year are applied with frequent applications of 100 pounds per acre. The fertilization is held off until May when the bentgrass has begun growth. Disease control on the renovated nine holes in 1968 consisted of one application of Cadmium Chloride at one ounce per 1000 square feet in the early spring and through out the year, six applications of PMAS plus Thiram were applied. Planned yearly, as was initiated in the Fall of 1968, aerorthatching and overseeding will be done in areas where POA annua encroaches and is weakened by the Tri Calcium Arsenate. As of this summer, the bentgrass population on the renovated nine holes is estimated to be 65 to 75% and increasing with the continued use of Tri Calcium Arsenate.

Bob Kapherr is now progressing with the second nine hole renovation since the majority of the membership is satisfied with the results of the 1967 program. He sees a lot of work ahead of him again this year but the fruits of his labor are worth it. He says, “when you can reduce your irrigation alone by 50%, it’s got to be worth it.”
