respondence recently which shows that so clearly that there is no doubt of it. You know city men dominate golf clubs, and the city man naturally knows city conditions, but he doesn’t know other conditions—he doesn’t have the faintest conception of what goes into any question in which soil is involved.

Professor Dickinson is maintaining his ten week course for greenkeepers. It is tragic that he can’t at the same time run ten one week courses to teach Green chairmen the error of their ways.

Now, the entrance of the college man into green-keeping is something I don’t feel personally should be blocked. I have known a great many greenkeepers in my time, and as a class they are a very interesting type of men to know. They are strictly individual, independent, resourceful, and in every way worth cultivating. They are a type of men typically American.

More About the Seed Markets—Chewings Fescue Crop Poor
By E. E. Pattison

IT IS expected that the market on Rough Stalk Meadowgrass and Wood Meadowgrass will be much higher. No new crop seed will reach here in time for Fall planting and stocks on hand of both articles are exceptionally small.

At this time of the year there is a natural interest in the 1929 crop of Chewings fescue and the early shipments from New Zealand or in other words those made during May and June will arrive in time for Fall planting.

The quality of the 1929 crop of fescue will not be as good as that of the 1928 crop. This is due to unfavorable climatic conditions existing at the time of harvest. In the wholesale market there has been quite a fluctuation in price.

The market opened low, went to a high level as the result of an unusual brisk American demand and during the last three weeks has receded somewhat. Based on the average price at which American importers have bought Chewings it is safe to say that the price this coming Fall will be approximately the

(Concluded on page 34)

For the Control of Brown-patch

TURFCALOMEL is the outcome of experiments to determine the most satisfactory, efficient, convenient, and safest fungicide for both large and small brown-patch. It contains both corrosive sublimate and very finely powdered calomel carefully adjusted in composition with mineral matter. This composition has distinct advantages. It prevents caking, gives bulk, and allows of a more even distribution of the active ingredients—thus reducing to the minimum any possibility of burning the turf. The same results cannot be obtained with the chemicals either alone or mixed with sand or compost.

THE RIGHT TOOL SAVES TIME

COMB

The flat, springy teeth of the True Temper Brume Rake will not injure the smooth surface of the green. They comb the grass and pick up all leaves and litter without injury to the tender grass roots.

The Brume Rake is light in weight. It is used like a broom. No back-ache.

The brand True Temper is burned in the handle to mark each rake as the best tool of its kind that can be made.

Bent Grass

“[For lawn purposes],” writes Hiram F. Goodwin, Box A, Redford Sta., Detroit, Mich., “I believe I have an improved strain and I have several acres of a velvet type that gives promise. During the past two years I have developed an 18-hole course entirely with bent stolons, the sixty acres of fairway, in one year’s time, forming a solid turf. For this purpose I used a vigorous strain that does not require so much watering and that does not form a fluffy turf. It is going into its third year now and I feel fully proves the value of this grass for fairways.

A Worm Killer

That’s Safe To Use

“ELECTRIC” Worm Eradicator is the most efficient worm killer I have ever used, and it does not harm or injure the turf. It is much handier to use than powder, and everything considered, it is much cheaper—C. E. Sheetz, Supt. of Grounds, Carlisle Country Club, Carlisle, Pa.

ELECTRIC

WORM ERADICATOR

is used on more than 700 golf courses. Safe, efficient and economical. We supply complete outfit for applying.
