

I would pick up stolons and replace and top-dress in. It eventually stopped raining and I have never planted greens which grew so well and developed so fast.

This has been a bad year on new greens as well as old, but a perfect year for weeds. I turned the greens in for play August 15. They were filled in beautifully. I weeded these greens once only and at the present time there are no weeds of any kind.

After the stolons had stayed put for a week or ten days and had started to turn green the chairman of the Green committee called me and said he had never seen anything so remarkable. He had expected to spend \$125.00 on each green again for new stolons.

Corrosive for Worms

By JOSEPH FOEGER, *Greenkeeper*

Ozaukee Country Club, Thiensville, Wisconsin

IN ANSWER to your letter of October 1, I wish to tell you of my experiences of the past season. We had some brown patch and used Nu-Green to treat some but was not very successful; so used Semesan instead with very good results. I think too much sulphate of ammonia is often the cause of brown patch. It makes the grass grow too quickly and so is too soft to withstand the brown patch.

We had no crab grass and hardly any chick-

WORMS ON THE OZAUKEE GREENS

This photo was taken after corrosive sublimate had been used

weed this year. Our greens were covered with same just a few years ago. Have been using arsenate of lead for the last two years. I am not using it as strong as recommended, only about ten pounds to the average green using a power sprayer. This also takes care of the worm situation.

Am enclosing a picture that I took three years ago when I used some corrosive sublimate to treat the worms. You can see at a glance how thick they were. Before using arsenate the worm casts were so thick you could not walk on the greens without stepping on some.

We built six new tees, two bunkers, rebuilt five bunkers, all of this being done with the regular crew of fourteen men. Also had a lot of extra work getting things in shape for the Western Open Tournament which was held August 21 to 24 with the greatest success.

Snow Mold at Winnipeg

By A. W. CREED

St. Charles Country Club, Winnipeg, Manitoba

BEING a Charter member of the N. G. A. of America, I want to congratulate the capable body of officers for the business-like and efficient manner in which the Association is being carried on and I am sure the results obtained so far in such a short space of time are a credit to their organizing ability.

Am now situated quite a distance from my fellow greenkeepers whom I knew personally when in Detroit, being assistant to the well-known greenkeeper Mr. H. E. Shave of Oakland Hills Country Club, leaving there to take up the position as head greenkeeper here in Winnipeg.

Conditions here are much more severe in the Spring than in the East, many of our *Poa Annua* greens being entirely destitute of grass until the temperature hovers around the sixty mark and that means about the middle of May. Our Bent greens stand the Winter fairly well. We are gradually turning all our *Poa Annua* greens into Bent.

I have constructed and planted four greens to Bent last year, and one this year. Last year I got forty bags of stolons from one of our well
