EARLY in the spring after rolling is completed, I topdress my greens with one yard compost mixing about half sand with one hundred pounds of fertilizer added to each yard of compost for each green. I use half sand on account of our soil being heavy clay. The fertilizer I used this year is 8-5-3 purchased from the Smith Agriculture Chemical Co., Columbus. The name of this fertilizer is "Weeds."

Last year I used Milorganite but had to use as much again in the topdressing as 8-5-3 to get the same results. I noticed, however that the Milorganite lasted longer than the 8-5-3. Being an organic fertilizer, the grass had a supply of nitrogen to keep drawing from. In weed control the 8-5-3 was much better than the Milorganite. Our greens were infested with chickweed before using "Weeds" but since using it this year we are gradually getting rid of it. We still have plenty of it, but it will take time to completely control it.

In March of this year while the ground was still frozen I took some sulphate of ammonia and sprinkled it heavy on spots of chickweed on about half of our greens. It was so cold that it laid there and didn't burn at all until the sun came closer and then it did its work. By putting it on heavy it burned the chickweed and also the bent. I finally had to plug some
A quotation on your fall requirements will be sent promptly on request.

**Greenkeepers Visit Toronto**

(Continued from page 6)

of mutual interest and to effect sound economies in the interest of the game while protecting the interests of all, and that Columbus had been accepted as the next convention city.

As he left Mr. Morley was extended another invitation to visit Toronto and was assured of a greater measure of hospitality from the Canadian members of the association, who, although not large in numbers, were unanimous in their view that the association was vital to their interests and that it would play a larger part in the development of golf.
