A New Foundation Fertilizer

A strictly organic fertilizer is being placed on the market through our columns this month by the Wayside Gardens Company, Mentor, Ohio. It is a plant food developed for the specific purpose of promoting deep root-action and to provide a dense, healthy growth of turf.

This new fertilizer is called "Wayside Gardens Plant Food. The manufacturers have given it a thorough trial through several years and are placing it on the market with the confidence that it will fulfill a purpose much needed by those engaged in turf culture.

Instead of being just a stimulant the Wayside Gardens Plant Food is an all-year-round proposition and one application will last from twelve to sixteen months.

Complete information will be furnished by the manufacturers, including an accurate analysis and a sample may be examined at the office of the Cleveland District Green Section, Caxton Bldg., Cleveland, O.

The Tee Data Problem

Now that the time-honored tee box is being erased from the golf picture, due to the change from sand to the artificial tee, the G. B. Lewis Company believes that the most logical place for the number, yardage and par is on the face of their golf ball washer or on a plate which can be easily attached to their standard iron tee stake.

The tee data numbers and letters are of etched-in dark green enamel on an aluminum plate, which is bolted to a metal plate finished in baked white enamel and attached to the face of the washer by means of two hooks and two non-rusting screws.

At those holes where no washer has been provided the tee data plate can be easily attached to the standard metal tee stake and later on when a washer is provided, it can be transferred from the tee stake to the face of the washer.

These tee data plates with the data numbers and letters, which can be changed if necessary, are reasonably priced and look like a practical solution

Golf News

Albany (N. Y.) Country Club has recently completed a hoseless fairway irrigation system, with hoseless tees, on its new 18-hole "sand dune" course, also a new pumping plant. Here is a case where the nature of the soil makes complete irrigation imperative. The installation was planned by Wendell P. Miller and Associates, who also superintended the construction by local contractors.

The project cost about $25,000.00 complete. Sidney J. Davis is the greenskeeper in charge. The project was sponsored and personally directed by Mr. John A. Becker, who has been President of the Albany Country Club for a number of years.

South Bend (Ind.) Country Club has recently installed a Buckner California
