

This is the way the test read two years ago: P. H. value 5.6 to 6.0, P205 250 to 350 pounds per acre, organic material 1 to 1½ parts in 10; root growth 3 to 4 inches; color of grass, shiny green, and stems stiff and sturdy. I might also say that greens that run high in organic material showed a little less P205 and vice versa.

Evidently if I have found anything worthwhile it will show itself next year, if someone is willing to try and keep a few greens under similar conditions. Some place along the line should be a medium of organics and phosphorus in the soil to produce the right kind of healthy growth.

I don't want anyone to believe that I don't use nitrogen because I do, both quick and slow available but all my greens had the same proportion of nitrogen per square foot and there weren't any that showed the result of the four special greens, so I have come to believe that the amount of organic material and phosphorus has something to do with their success.

Spring Work

By JOSEPH BALL, *Greenkeeper*
Chartier Heights Country Club, Grafton, Pa.

AFTER the snow has cleared off in early March, I usually make a thorough examination of my course and note very carefully the winter damage so I have no guessing as to where to start.

I usually take the temperature of the ground at various times. In the meantime my men are busy mixing fertilizers and topdressing. And when the temperature rises outside sixty to seventy degrees and the ground is fifty I begin fertilizing. You will notice your grass responding much quicker and at the same time avoiding waste by spring rains, leaching and washing away your fertilizer before it has had time to act on the plants.

It is unfair to always blame fertilizer for your troubles. You can underfeed and overfeed; always let your greens a little on the hungry side. Pay close attention and you will soon note that it will become familiar to you. Let up immediately and your greens go into the dormant stage for now they need rest not abuse. This advice is more for the young greenkeeper.

Greenkeepers Everywhere say: "NEXT BEST TO RAIN"

The famous Double Rotary Sprinkler has won its present leadership through 13 years of superior work on the finest golf courses throughout the nation. Its even, thorough distribution of water wins instant approval of all greenkeepers. Its positive rotary action makes it a *big water saver*. Never packs or washes soil. Never puddles. Covers any circular area up to 80 feet (more than 5,000 square feet) or down to 15 feet in diameter according to pressure. Completely covers a green in one setting. Self-operating. Adjustable nozzle. Skid base. Built of finest materials for years of service. *Guaranteed!*

Ask your Pro or go to your local dealer. If neither can supply you, order direct. Try 10 days. If not satisfactory, return sprinkler and money will be refunded. Descriptive literature on request.

DOUBLE ROTARY SPRINKLER
Next Best to Rain.

DOUBLE ROTARY JUNIOR

The ideal all-purpose sprinkler for home owners. Has all the proved features of the above Heavy Duty model, plus stationary sprinkling features.

DOUBLE ROTARY SPRINKLER COMPANY
109 COCA CCLA BLDG. KANSAS CITY, MO.

Give your greens a good sulphating early in the spring as soon as the ground is warm and before the weed seeds germinate. This will cut down your weed picking expenses. I have cut my weed picking expenses from \$20 a day to 75 cents a day. When you start out in the spring let your first thought be greens and fairways; other work can stand.

I am sending you a picture of one of the little things a greenkeeper has to do outside of greenkeeping. A rustic bridge spanning a ravine on No. 13 fairway, 205 ft. long, 16 ft. high in the middle, built by my own men at a cost of \$316 only and supervised by myself.
