Number 1 for bents and fescues, Number 2 for blue grasses.

for caution in spreading, because of the liability of burning the grass the practical agrostologist accepts the commercial fertilizer ratios as safe and sane, even though not ideal. The home owner who knows how to use ammonium sulphate can have an excellent lawn fertilizer by using it as a supplement to a commercial mixture.

WARNING!

If the directions say use 10 lbs. per 1000 square feet don’t use any more; many a good lawn has been ruined because the owner or caretaker thought that if a 10-pound application was good a 20-pound application would be excellent.

Golf Course News

A column of information brief and accurate. Items are welcome and will be published.

FROM THE SOUTH

By Merle Zweifel

When Jay C. Painter, Secretary of the Oklahoma State Golf Association calls greenkeepers together next month to arrange the organization of a state greenkeepers’ Association, he apparently is arranging a “new deal” for greenkeepers of the oil country.

The proposed organization will be entirely independent of other groups and its aims will be very much established by the fact that Green chairmen of every golf club in the state will be given an opportunity to join the association as regular members. Mr. Painter believes that by enrolling Green chairmen he will contact many interesting discussions regarding turf culture at proposed future meetings and it will offer an excellent chance to give club officials an idea of what greenkeepers are up against with slashed budgets and their struggle to maintain a good golf course for golf club members. Several Green chairmen have offered their support of such an organization.

The city of Rogers, Arkansas, in the heart of the Ozarks, will soon be listed among the leading resort cities of the nation if plans of a group of Jersey City promoters are accomplished. Site has been chosen and finances have been arranged for the construction of a magnificent resort hotel together with a thirty-six hole golf course with grass greens and work on the project is to begin by September 1, 1933. Ozark mineral waters with their healing properties are to be the main drawing card.

NEW ENGLAND NOTES

By Guy West

The June meeting of the Greenkeepers’ Club of New England was held at the Kittansett Club, Marion, Mass., on June 5. There was an attendance of over a hundred members and guests. The Kittansett Club also invited to this meeting the Green chairmen of clubs whose greenkeepers are members of the Greenkeepers’ Club, and provided an additional prize to those presented by the Club. This Kittansett Club is a beautiful course near Cape Cod, and is in fine shape.

Several wives of members also attended this meeting, and were escorted by Mrs. Pierce, wife of Greenkeeper Elliot D. Pierce, to several of the fine estates around Marion.

The tournament season is now on in full swing, and any player wishing to play in a tournament can take his choice of three or four practically any week. Courses in general are in good condition, a little on the dry side at present, with little brown-patch reported as yet. The cuts in course budgets have in most cases meant fewer men, but most greenkeepers are succeeding in getting the essential things done, and leaving undone from necessity the least important items.

THE RHODE ISLAND GREENKEEPERS’ ASSOCIATION held its monthly meeting on June 19 at the Metacomet Golf Club, East Providence, R. I.

CREeping BEnt TURF withstands HEAT wave Countless greens were ruined in the severe heat waves before July 4th, but Illinois Grass Co’s True Washington Stolon Creeping Bent stood this trying period with little or no damage. Used by hundreds of greenkeepers, golf and country clubs, etc., in solid turf form. Furnished in rolls ready to lay down like a carpet. Guaranteed quality. Available in stolons also. We grow Blue Grass sod, too.

Write today for prices and samples.
