A MARVELOUS STAND OF CREEPING BENT
No. 1 Green at Skaneateles, N. Y.

The Skaneateles Country Club is gradually converting seeded greens into Creeping Bent greens, using our Washington strain of stolons in replanting. The green shown above is one about which every member of the club likes to talk. It is in a beautiful location, overlooking a small lake; and the grass itself, as you can plainly see, is just about perfect. As a result of the trial planting of two greens in 1926 we were asked to ship stolons for two more last fall. Eventually all nine greens will be in Creeping Bent and then everybody will be happy!

Let us quote Mr. B. C. Day, Greens Chairman of the club:
"I am pleased to say that the two greens we planted last fall have survived the winter and give promise of being all we had hoped for. We are exceedingly proud of these two greens. No. 1, of which I am sending a photograph, is simply a beauty!"

In our own nursery we are growing Creeping Bent Stolons of the Washington and Metropolitan strains. They are given the same constant care and attention exercised in the selection and recleaning of Scott's Seed. We have had the pleasure during the last eight years of serving 850 golf clubs—one out of every five in America. If your club is not a user of Scott's Seed, we suggest you have the Chairman of the Greens Committee write for quotations or better still, ask for them yourself. Resolve to cut down your weed worry and expense in 1928 by sowing Scott's Seed.

FREE: Chopped Stolons for a trial planting of 100 square feet
