Lost Your Notes?
If you couldn’t attend this year’s OTS or simply want a refresher on some of the sessions, we recap three of them with articles in this issue.

2007 FIFA U-20
See pages 20-22 for an in-depth look, from the field crew’s perspective, at the remarkable transformation Victoria’s Royal Athletic Park underwent for last summer’s World Cup.

In the meantime, chemical pesticide manufacturers created new pest control products for use by farmers which ultimately led to the abandonment of agricultural vacuums. Chemical pesticides were touted as a technological wonder because they were so economical and effective at increasing crop yields. However, the perceived miracle ceased when greater amounts of pesticides were needed to achieve treatment results, and when insect pests such as the Colorado potato beetles became chemically resistant. Voices from science, academia, and the public began to surface conveying fears of environmental degradation and human harm resulting from unrestricted pesticide use.

In response to these concerns, a multi-tactical approach to pest management emerged; integrated pest management (IPM). IPM was developed to reduce the reliance on chemical pesticides by encouraging the use of other treatment methods such as biological controls, physical controls...
