- COST: \$8.00 per person; includes BBQ lunch, coffee, snacks and bus service
- PLEASE REGISTER in advance. Contact N.C.T.C. at 415 283-6162 or Dave Hanson at 415 726-9059

GCSA of Northern California Board of Directors voted at their last meeting to distribute a survey to all Golf Course Superintendent members.

The results of this survey will directly benefit those members seeking new positions to know what the average salaries and benefits are. Also when club officials inquire about salaries and benefits they should offer, the Association will have factual information to give them. Personal information will be held in strict confidence. For this to be beneficial to the Association a good response is essential.

Carl Wick, Farm Advisor - Turf, Oroville, CA 95965 sends Leaflet #21050 Mushrooms in Lawn and Landscape, authors W. S. Moore, Staff Research Associate, C. S. Koehler, Urban Pest Management Specialist, and A. H. McCain, Plant Pathologist, Cooperative Extension, Berkeley. "Mushrooms, sometimes called toadstools, are the "fruit" of some kinds of fungi. Most mushroom-producing fungi are beneficial. The fungi decompose organic matter, thereby releasing nutrients that are then available for plant growth. In contrast, some fungi that produce mushrooms are harmful to plants. This leaflet briefly tells what mushrooms are, how they are beneficial or harmful, and what can be done about them." If you are troubled in this area, order this leaflet. It has a lot of good information in it.
