

FYI

It's Official

As of November 1, the GCSANC office location is in Diamond Springs, California. If you're on your way to Tahoe, stop by and say "hello"!

New Mailing Address:
Golf Course Superintendents
Association of Northern
California
550 Main Street, Ste G
PO Box 3360
Diamond Springs, CA 95619
Phone: 916/626-0931
Fax: 916/626-5132

Monthly Meeting Reservations and Cancellations

I would like to start by thanking the 95% of you guys who make meeting reservations and cancellations in a timely manner. This procedure was developed to accomplish a more orderly registration process and remove the necessity of handling money at the monthly meeting. It reduces the time I spend at the monthly meetings and, thereby, reduces administrative costs for the association. Again, thanks for your cooperation.

But...there's always some grumbling in the ranks.

"Why do we need to make reservations for meetings? We didn't used to have to do this."

"Why do I need to cancel my reservation 48 hours in advance? I didn't know until the last minute that I couldn't make it."

"Why do the meetings cost

so much?"

Although we understand that there are sometimes circumstances beyond your control, we have to respect the needs of the host golf courses. Think how *your* food manager and golf pro would react to a surprise "tournament" for 80 to 100 people! Do you think you could convince them to "just wing it"? Does your food manager keep enough food items on hand for lunch for 100 additional people? My guess is you probably answered "no."

The clubs at which we hold our monthly meetings require that we give the food manager the number of people expected to attend, in advance. The number we supply is a **commitment** number. We pay whether you show up or not. If you telephone your cancellation in advance, we can adjust our numbers for the event with the host.

The golf shop needs to know how many carts they will need for our group. If you make a reservation and do not call in your cancellation, those carts cannot be used by the golf shop to accommodate other players outside our group.

Regarding receipts, most of you want a receipt for each meeting. My fingers just don't write fast enough to provide a receipt for each one of you at the door, not to mention the hold up in the registration line if I had to perform that function at the meeting. Therefore, I prepare your receipt based on your reservation. And if you bring a guest, treat them like one. Pay for them with your reservation.

Tips from the USGA New Product Evaluation

by Pat Gross,
USGA Agronomist

I am sure you read with great interest the last article by my colleague, Paul Vermeulen, regarding the magical powers of Yuban coffee on turfgrass. Although this was a "tongue-in-cheek" effort to raise awareness of questionable products in the marketplace, it does bring up the question "How can I successfully evaluate new products?"

Why not conduct some limited field research on your own golf course to objectively evaluate the merit of new products? Here are some suggested guidelines:

- ▲ **Obtain small quantities** of material and establish test plots in remote areas of the golf course or on your putting green nursery.
- ▲ **Compare** similar products.
- ▲ **Replicate** the plots, if possible.
- ▲ **Include check plots** within the test area where no product is applied. Without check plots, it is impossible to draw accurate conclusions.
- ▲ **Keep accurate records** and make regular observations of the plots.
- ▲ **Seek guidance** and input from county extension agents, university researchers, and experienced turfgrass professionals in your area.
- ▲ **Try to obtain** additional information about the product. The best unbiased source would be peer reviewed scientific research studies. As a reference source for this material, you may wish to contact the Turfgrass Information File (TGIF) at Michigan State University: (800) 446-8443.

Golf course superintendents are the greatest experimenters and improvisors in the world. Limited field testing can help determine the benefits of a product before incurring a large expense or possibly causing damage to turf. On a positive note, you may find products that benefit your management programs or provide a cost savings. Doing your homework and establishing test plots will give you objective information on which to base future decisions.

The Association arranges monthly meetings through the voluntary cooperation of the host superintendent and his club. The host club and superintendent set the charges for food and carts. Greens

fees are waived in consideration of the superintendent's association. GCSANC does NOT make money on these events, but we do want to try to cover basic costs.

Continued on page 7

FYI

Continued from page 5

In addition to food and beverage, meeting rooms, golf and education, there are other costs that must be covered on a monthly basis. For these additional fees are assessed as follows:

- \$2.00 fee to cover administrative costs, ie: printing, envelopes, postage and me.
- \$3.00 for tournament prizes. This pays for the gift certificates for the tournament winners and can be redeemed at the pro shop of any course. Therefore, the money goes back to support the industry which employs you.
- \$2.00 goes directly back to the Scholarship and Research Fund maintained by the Association.

The monthly meeting locations and costs are dictated by the superintendents willing to allow the Association to use their facilities for our meetings. If you can offer your club at a lower cost, by all means, contact the Program Chairman Randy Gai, CGCS, or the Assistant Program Chairman, Bill Kissick, CGCS, and let them know you would like to contribute

to the Association by holding a monthly meeting.

Environmental Compliance

Continued from page 4

There are very few laws that affect you in this approach. The most significant ones would be the hazardous materials laws. Any treatment unit will produce some waste by-product -- dirty filters, waste oil, waste sludge or sediment. If the pollutant concentrations of this waste by-product are of a certain level or quantity, and if this waste by-product can be classed as hazardous, then the State Department of Toxic Substance Control will regulate you.

BUYER BEWARE!

Wastewater treatment is an applied science that has been around since the early 1940s. Most of the technology in use today has been focused at industry or government, not small scale. There have been many technological improvements in recent years that simplify the scaling down of these tried and true methods.

FOR SALE

The Island Club Golf Course
Superintendent Jim Adams at 510/684-9580

1. 1990 John Deere 855 86" tractor mower; good condition; \$10,500 or BO
2. John Deere 280S 88" Fairway Aerifier/Slicer; little used; \$2600 or BO
3. Jacobson H-F 15-gang mower; many new parts, needs some work, \$2,300 or BO

Employment Opportunity

The Sharon Heights Golf and Country Club is seeking a qualified Assistant Superintendent. Requirements include a degree in Turfgrass Management, 3-5 years experience, and a Q.A.C. license. Compensation will be based on experience. Send resumes to:

Sharon Heights Golf and Country Club
 2900 Sand Hill Road
 Menlo Park, CA 94025
 Attn: Ross Brownlie

In the golf course small-scale application there are a lot of choices, hardly a one of them alike. Some work better than others. One would have to take a college course in basic wastewater treatment technology to understand and appreciate the technological differences between the choices in

treatment equipment and the methodology.

In the next article I will explain in some depth the different techniques and technologies that are currently offered on the market for wastewater treatment and recycling.

SUPPORTER LISTING

SCOTTS PROTURF

Fertilizers - Poly S and new Triaform technologies
 Herbicides, Fungicides, Seed, Soil, tissue, water and turf disease testing
 Chuck Dal Pozzo, Sr. Tech. Rep 510/791-8985

RUSSELL D. MITCHELL & ASSOC., INC.

Providing quality irrigation design and consultation services including bid document development, hydraulic analysis, and field staking.
 510/939-3985 510/932-5671 FAX

CALCIUM

Pacific Pearl Oyster Shell -- the most efficient calcium for turfcare pros. Available from your fertilizer dealer.
 For technical assistance call John Mazura
 Jerico Products, Inc. 707/762-7251

MEDALIST AMERICA SEED

Complete line of turfgrass seed - Blue, Bent, Rye, Fescue, Bermuda. Highlights: Triple-A, Fults, Medalist Gold, Sundevil, Premium Sod, Putter, Amigo
 Blends are our specialty!
 Mike Tentis 800/742-0463
