Strictly Business (Cont’d)

◊ State your neutrality — Be certain that each individual understands your role. You are not concerned with assessing blame but, simply to identify the problem and resolve the conflict.

◊ Carefully manage the discussion — Make sure only one person speaks at a time. The goal is to gather the facts. Ask each individual to summarize their views and the views of the other party. Try to direct the discussion so there is some agreement among the employees as to what the problem is. This will go a long way toward a compromise and lead to a solution. More often than not the individuals involved will find the problem is simply one of poor communication.

◊ If the parties can’t agree on a solution be prepared to impose one — Try to make it as equitable as possible, so one individual doesn’t feel as though he is the only one losing. Usually in these types of disputes fault can be found with each party. Once a resolution is agreed upon, declare the dispute over with and thank the employees for their cooperation. Remind them of the fact that a continuation of this conflict will not be tolerated and suggest that further disputes may result in disciplinary action.

◊ Follow up — After a few days, check to see that the resolution is working. Monitor the situation every few weeks and be quick to respond if you sense the conflict is heating up again.

Nothing Happens Fast (Cont’d)

or rebuilding a problem green will often offer faster, longer lasting results than any “over the counter” bottled cure. Golfers would rather you throw thousands of dollars away on snake oils and additional chemical “fixes” than address the real agronomic issue, right? Unfortunately, it’s true in some cases. As Dr. Joe Vargas once said, “Golfers would rather get rid of a superintendent than a tree.”

Sorry, folks! I just don’t think the magic potion in a bottle will ever be found. If it is, you can look for me to be selling it, because the payoff should be better than winning the lottery. Nothing can replace good agronomy and good growing environment. Nothing in a bottle, bag or box. The formula to keep turfgrass healthy is simple, provide adequate water, soil aeration, ample sunlight and good air movement with a little N, P and K on a regular basis. Each of these ingredients is essential in proper amounts, omit one, add too much or too little of another, and a weak link develops. That weak link leads to the one thing that does happen fast in agriculture . . . crop failure! So, always remember, nothing happens fast in agriculture, except crop failure.
