to be more beneficial than the non-Hydrojetted control plots.

Pat Gross detailed ways to deal with the summer stress conditions when growing annual bluegrass putting greens. Pat noted that Poa would die when turfgrass canopy temperatures reach 105 degrees. Typically canopy temperatures are 10-15 degrees higher than the air temperature. So on a day over 90 degrees or if the turf feels hot to the touch, a syringe cooling mist of water should be applied. Pat cautioned that water is a great conductor of heat and that over watering will actually superheat the root zone and predispose the turf to heat and other stresses. Pat recommended the use of fans in pocketed sites to dry the turf and increase transpirational cooling. A good suggestion was to use a tractor-mounted blower on a problem green to determine if a permanent fan is needed. Pat also talked about getting the turf healthy going into the summer, managing salinity, and using walkers with solid front rollers during the summer stress season.

Mike McCullough, agronomist for the NCGA, noted some of the problems we have in the area. One of the worst weeds in putting green turf is Sollivia or Brass Buttons. This weed can compete at greens height and will spread rapidly if left unchecked. Light frequent applications of herbicides have only had mixed results. Mike has also been working on a moss control study evaluating Junction, RD-20, Moss Out, Daconil, and Ultra Dawn. The Ultra Dawn had the best results as a drench treatment at the rate of 4 oz. per gallon with 80 gallons of spray solution per 1,000 sq. ft. Mike also mentioned a new product called Proxy for Poa seed head suppression. The product has been tested and provided 75% control of seed heads for up to six weeks for a single treatment. The product should be available in California next year.

The meeting portion of the day concluded with a panel discussion and questions from the floor. An awesome lunch and a great day of golf followed. Sorry that more members couldn’t attend this outstanding event at $25. The lineup of speakers was second to none. It was a throw back to the old days of the association. There just aren’t going to be many meetings like this anymore. I guess price, a fun golf course and educational value isn’t the issue.

Hello out there, what is?

CGCS Laurent Has “Senior” Moment to Remember

It’s been a memorable year for Terry Laurent, CGCS at Saucon Valley Country Club. He had the task of preparing his Bethlehem, Pa., golf facility to host the U.S. Senior Open, but that was only the beginning. The evening before the final round of the tournament, Laurent was approached by the USGA about playing as a marker for competitor Bill Tindall. It caused a restless night, but 45 minutes before the scheduled tee time it was confirmed that he would be playing with Tindall as a marker to help maintain the pace of play.

Although he’s a four handicap, Laurent hadn’t played a competitive round since the 1970’s. Despite hitting only a few practice shots, he managed to calm his nerves and shoot a respectable 81. The experience was made even more special by the fact that his 22-year-old son Patrick, home from college for the event, served as his caddie. Laurent said he had additional support from his crew who followed him around the course and provided vocal support. And from the club members who served as security and escorted him to the first tee.

“It was something I’ll never forget,” Laurent said. “It was one of those dreams come true, getting to play in the event at my own facility. The gallery was very intimidating and my heart was pumping the whole round. But the best feeling may have been the support I received from the club members. That was great.”

Cornell Offers Help in Canada Geese Management

Cornell Cooperative Extension has produced a 42-page guide to help wildlife professionals, turfgrass managers and homeowners select strategies to alleviate problems caused by non-migratory Canada geese. Managing Canada Geese in Urban Environments provides information on the biology of Canada geese, regulations covering them, management strategies and techniques. It lists equipment suppliers and includes a chart that summa-

Naumann’s NorCal News

Adam Schauer is the new superintendent at Deep Cliff Golf Course in Cupertino. He was previously the Superintendent at a course in El Centro. He had been the assistant at Rancho Del Pueblo GC in San Jose prior to his move south. Both Rancho Del Pueblo and Deep Cliff are managed by CourseCo.....Ray Layland has left Sierra Pacific Turf Supply and is now working with Dave Sexton at the Meadow Club in Fairfax. Replacing Ray as the Napa Branch Manager and golf salesman in the area is Tony Steers. Tony was the superintendent at Contra Costa CC until January of this year....Poplar Creek Golf Course, formerly known as San Mateo Municipal Golf Course, had its Grand Opening and media day on July 10. The media and many local superintendents participated making it a “Grand Day” for all. Thanks go out to superintendent Dulbag Dubria and his staff....The week before the US Open in Pebble Beach, Pasadera CC in Monterey had its Grand Opening. Superintendent Mike Phillips and staff had the place shining. Jack Nicklaus was there to give a golf clinic and play a round of golf. Over 600 people were there to witness the event.....
