

CONGRATULATIONS TO GCSANC MEMBERS IN ANAHEIM

Solutions Challenge Winner at the GIS

\$1,000 Worth of Eagle One Products Merchandise

Donated by Eagle One Golf Products

John P. Martin, Contra Costa Country Club,
Pleasant Hill, CA

Top Ten Finishes in the GCSAA Tournament in Palm Desert

First place in the 2nd Flight:

John Pina, La Rinconada CC, Los Gatos, CA

Seventh place in the 2nd Flight:

Pat Finlen, CGCS, The Olympic Club

Eighth place in the 4th Flight:

Tim Powers, CGCS, Crystal Springs GC

Sixth place in the 6th Flight:

Don Naumann, Blackberry Farms GC

Fifth place in the Senior I:

Dave Davies, CGCS, Stonbrae CC

Fifth place in the Super Senior:

Howard Fischer, Jr.

Sixth place in the Super Senior:

John Grant

2007 ANNUAL MEETING AND GCSAA ELECTION RESULTS

Ricky D. Heine, CGCS, President;
David S. Downing II, CGCS, Vice President;
Mark D. Kuhns, CGCS, Secretary/Treasurer.

DIRECTORS:

James R. Fitzroy, CGCS;
Robert M. Randquist, CGCS;
Patrick R. Finlen, CGCS;
Sanford G. Queen, CGCS;
Keith A. Ihms, CGCS.

The immediate past president is Sean A. Hoolehan, CGCS.

In addition, all amendments to the GCSAA bylaws were approved.

Delivering Value

Developing Great Relationships

Target Specialty Products has delivered value to golf course superintendents for over 35 years. We deliver value in the form of:

Complete Product Line including:

- Fertilizers
- Herbicides
- Fungicides
- Insecticides
- Spray Equipment
- Safety Equipment
- Soil Conditioners & Amendments

Seminars & Training

Written Recommendations

Delivering Value
ISO 9002
CERTIFIED

Call Target Specialty Products for all your turf pest management needs.

The Cost of Fertilizer Rising Due to Demand For Ethanol Production

By Steve Franzen
Best Professional Products

Inorganic fertilizers like urea, ammonium sulfate, and ammonium phosphates are the primary nutrient sources for golf and landscape maintenance. The cost of these fertilizers is influenced by many factors. Natural gas, used in the production of ammonia, is usually the primary driver. Lately though, another fuel has made a substantial impact. The government's support and subsidy for domestically produced biofuels, primarily ethanol produced from corn, is having a huge impact on the availability and price for the fertilizer you will be using this season and perhaps, for years to come.

In the anticipation of several hundred more ethanol plants being completed in the near future, corn prices have

nearly doubled from the traditional range of \$2.00/bushel to nearly \$4.00/bushel. The amount of corn planted is increasing dramatically as well. A USDA Forecast predicts 87 million acres of corn will be planted in 2007. This is an 11% increase (8.7 million acres) from 2006. U.S. nutrient consumption is expected to increase as well to 13 million tons of Nitrogen, 4.8 million tons of Phosphate and 5 million tons of Potash. This represents a 7-9% increase in total nutrient use over the 21 million tons consumed in FY05/06. So why should the golf and landscape industry be concerned about the agricultural forecast and acres of corn planted? Golf and Landscape represent less than 5% of the total U.S. fertilizer consumption but the

The new choice for *Reliabus performii*.

Introducing Propiconazole 14.3, the newest addition to Quali-Pro's ever-expanding California product portfolio. Powered by the same active ingredient as Banner[®] Maxx[™], Propiconazole 14.3 gives superintendents choice control. Get the systemic disease control, long-lasting residual, tank-mix stability and excellent coverage you expect with new Propiconazole 14.3 fungicide from Quali-Pro. Choose quality and value, go with Quali-Pro.

For more information, please contact Mike Blume at 206-571-7218 or visit www.quali-pro.com.

Propiconazole 14.3	Oryzalin 4 Pro
Imidacloprid 0.5 G	Glyphosate T&O
Imidacloprid 75 WSB	Chlorothalonil DF
Chlopyrifos 4E	Chlorothalonil 720
Prodiamine 65 WDG	Mefenoxam 2 AQ

SUPER PROFILE

David Sexton, CGCS
Golf Course Superintendent
Meadow Club

Name: David Sexton

Employer: Meadow Club

Position: Superintendent: 26 years

Years in the Golf Business: 30 years

Previous Employment: Ojai Valley Inn

Education: B.S., Ornamental Horticulture, Cal Poly SLO, 1976

GCSANC Work or Interests: Past Director and Secretary/
Treasurer of GCSANC

Other Organizations: SFBBO

Family: Married, Daughter Sasha, who is attending college in San Diego

Interests Outside of Golf: Camping, Birding

Favorite Vacation: Staying at my future home in Graeagle

Best Golf Related Memory: Watching Tom Watson chip in on the 17th at Pebble Beach at the 1982 US Open

Favorite Course to Play: Graeagle Meadows

Course You'd Like to Visit: Bandon Dunes

Strangest Thing You've Witnessed On The Golf Course:
A large goose that adopted a family of ducklings. It followed them everywhere and protected them by very loud honking whenever anyone got too close.

Worst Comment/Question From a Member: When I asked a Green Chairman about a surprise purchase he had made for the golf course, what account should I use, he replied "On account of I wanted it."

What You'd Be Doing If You Weren't Involved With Golf: Research Biologist or a CPA

MEADOW CLUB

TURF TIME WEST KEEPS YOUR TURF HEALTHY!

Greens • Tee Boxes • Fairways

Our deep drill aerification process promotes a healthy root system, increases oxygen level in soil, increases water percolation, and relieves compacted soil. Easy clean up.

We have 5 Deep Drill and Fill machines. The holes are filled with the amendment of your choice.

We have 5 Deep Drill machines. 18 greens can be aerified in one day. Fast heal time.

Experience • Service • Proven Results

Drilling since 1993

LPGA PARTNERS WITH GCSAA FOR AN AGRONOMIST

The Ladies Professional Golf Association (LPGA) has partnered with the Golf Course Superintendents Association of America (GCSAA) to add a full-time agronomist to its tournament operations team.

The agronomist will assist LPGA tournament operations staff in developing consistent course conditions and serve as a liaison between the LPGA and the host facility golf course management team. The GCSAA will conduct a national search for the position beginning next month and have targeted early July as the start date for the candidate.

"We announced this to the Tour members at last night's player meeting and the response could not have been more enthusiastic," said LPGA Commissioner Carolyn F. Bivens. "We are fortunate to play at terrific venues, and having a full-time agronomist will only enhance our competitions and the stages on which we play." The position will be a GCSAA employee, however, he or she will work closely with the LPGA staff and golf course superintendents at LPGA tournament sites. The desired outcome is to achieve consistent course set up conditions (fairway width, height of cut for roughs and fairways, green speed, etc.) for the LPGA events.

"We are pleased to offer this service to the LPGA," said GCSAA Chief Executive Officer Steve Mona, a member of the LPGA Commissioner's Advisory Council. "A need was identified and we have the means to fulfill it. Having a full-time agronomist will be a significant benefit to the staff and players."

The Cost of Fertilizer Rising Due to Demand For Ethanol Production

price and availability of fertilizer used in our industry is tied closely to the cost of agricultural inputs. The U.S. market is expected to be about two million tons short of urea. Urea is the most widely used nitrogen source for turf. Whether it is a reacted product like Nutralene® or Nitroform®, a stabilized nitrogen product like Umaxx®, or coated products like Polyon® or Polymer Coated Sulfur Coated Urea, they all begin as Urea. Some are predicting not only higher prices, but serious shortages.

Fertilizer prices have not seen these kinds of increases since price controls were lifted in 1973. Combined with a brief grain shortage, prices rose significantly and then retreated almost as rapidly as production again overtook demand. When hurricane Katrina crippled a significant amount of the U.S. Natural Gas production it caused a sharp increase in the cost and considerably reduced domestic ammonia/urea production. Many ammonia/urea plants across the nation were idled or dismantled. Combine that with a limited physical infrastructure to import/deliver urea and ammonia to the major growing regions, you have a “perfect storm” for higher costs and probable shortage. Urea prices are approximately 50% more than a year ago and Ammonia has returned to the record levels of the Katrina effect of last year.

The other primary nutrients, phosphate and potash are increasing as well. Wholesale prices for DAP (di-ammonium phosphate) and MAP (mono-ammonium phosphate) are currently 27-44% over last year's prices. Potash has gone up about 11% in the past 20 months. Not to be out done, micro-nutrients like iron, manganese, and zinc are also more expensive.

So what course of action makes sense under these circumstances? First of all plan your needs early and obtain your fertilizer ahead of your desired application date. “Get er done” sooner rather than later will ensure you compensate for availability challenges. Evaluate your

program and use just what you need. Perhaps a straight nitrogen treatment in place of a complete N-P-K application will be sufficient and save some expense. Micro-nutrients are expensive so if you need them make sure they are in a form that does you some good. A blended fertilizer that contains 2% Iron usually means that 4% of the ton (80#) is iron. If you are applying 5# of that fertilizer to 1,000 sq. feet (220#/acre) you will be applying just 3.2 ounces (8.8#/acre) of iron pellets. It is virtually impossible to cover 1,000 sq. feet effectively with 3.2 ounces of iron pellets. In a homogeneous fertilizer with iron every pellet applied will contain iron providing uniform coverage. This dramatically increases your chances for an effective iron application.

Fertilizer is fortunately a small part of most golf or landscape maintenance company's budgets. Labor, equipment, fuel and insurance are usually larger expense items. Another thing you can do to help minimize the effect of higher fertilizer costs is to buy better fertilizer. Higher quality fertilizer, that contains “slow release” nitrogen, usually last twice as long as cheaper versions. They should cost you less labor to maintain. This reduces three of your major expenses, labor, equipment, and fuel. An application plan will also help target usage and should result in better timed and hopefully fewer applications.

While the ethanol boom is good for America's dependence on imported oil, it is presenting some serious challenges for turf managers and golf course superintendents. To cope with higher fertilizer costs and potential shortages make sure you have your fertilizer well in advance of when you need it and use better quality longer lasting fertilizer. Your customers, manager, or greens committee will appreciate it.
