How to Convince Your Employer to Send You to Expo 2006

Brad Park*

(Editor's note: This article was adapted from materials provided by Sports Turf Managers Association)

It’s time to begin planning your trip to Expo 2006. The New Jersey Turf & Landscape Conference and Expo 2006 will be held at the Trump Taj Mahal in Atlantic City, NJ on December 5-7, 2006. How can you convince your employer to send you? Continue reading...

Educat e yourself on the Conference and Exhibition

• Provide an overview of the size and scope of Expo 2006. It may be helpful to give your employer a copy of the brochure. This edition of SFMANJ Update provides the Sports Field Managers Program for Expo 2006.

• Pinpoint specific sessions you plan to attend, and tie their relevance to your sports facility. As part of the Sports Field Managers Program, School IPM will be featured on the afternoon of Tuesday, December 5. A representative from the New Jersey Department of Environmental Protection (NJ DEP) will be speaking and taking questions on the specifics of the current NJ School IPM Law followed by a panel of NJ school field managers who have implemented school IPM programs at their facilities.

• Highlight the trade show and cites suppliers and equipment manufacturers you plan to meet.

• Discuss the networking opportunities you will have with peers who share challenges similar to the ones you have.

• Note that NJ DEP pesticide recertification credits will be available.

• Explain how innovations in products, new research, and cutting edge management changes are accessible by phone or by page to address any concerns that might arise in the future.

To meet.

• Demonstrate how you will share the technical information learned with your staff and integrate it into your daily operations. The more you practice and incorporate organic management into a soil, the more a topdressing material varies from the existing rootzone in relation to its texture classification and physical properties. The more cultivation is necessary to blend the existing rootzone with the newly added material to give your soil the best chance to be successful. The more a topdressing material differs from the existing rootzone, the more cultivation is necessary to blend the existing rootzone with the newly added material to give your soil the best chance to be successful. The more a topdressing material differs from the existing rootzone, the more cultivation is necessary to blending/rooting down the different materials.
